<i>patterns and protecting natural systems</i>	
(d) Plan for the Future	Section 9
(1) Land Use and Development Goals:	9.1
(A) <i>Community concerns and aspirations identified at the beginning of the planning process;</i>	9.1 – 9.5
(B) <i>Needs and opportunities identified in the analysis of existing and emerging conditions</i>	9.1 – 9.5
(2) Policies:	Section 9
(A) <i>Shall be consistent with the goals of the CAMA, shall address the CRC management topics for land use plans, and comply with all state and federal rules;</i>	9.1 – 9.5
(B) <i>Shall contain a description of the type and extent of analysis completed to determine the impact of CAMA Land Use Plan policies on the management topics, and a description of the policies, methods, programs, and processes to mitigate any negative impacts on applicable management topics;</i>	9.1 – 9.5 11.1
(C) <i>Shall contain a clear statement that the governing body either accepts state and federal law regarding land uses and development in AECs or, that the local government’s policies exceed the requirements of stat and federal agencies</i>	9.1 – 9.5
(3) Land Use Plan Management Topics	Section 9
(A) <i>Public Access</i>	9.3
(B) <i>Land Use Compatibility</i>	9.1
(C) <i>Infrastructure Carrying Capacity</i>	9.2
(D) <i>Natural Hazards Areas</i>	9.5
(E) <i>Water Quality</i>	9.4
(F) <i>Local Areas of Concern</i>	N.A.
(4) Future Land Use Map	Appendix D
(A) <i>14-digit hydrological units encompassed by the planning area;</i>	
(B) <i>Areas and locations planned for future growth and development</i>	
(C) <i>Areas and locations planned for future growth and development with descriptions of compatible land use and activities</i>	App. D
(i) <i>Predominant and supporting land uses that are encouraged in each area</i>	5.2 10.2.A.1
(ii) <i>Overall density and development intensity planned for each area</i>	5.2 10.2.A.1
(iii) <i>Infrastructure required to support planned development in each area</i>	11.2
(D) <i>Areas in existing developed areas for infill, preservation, and redevelopment</i>	5.2 10.2.A.1
(E) <i>Existing and planned infrastructure, including major roads, water, and sewer</i>	11.2

In addition, the plan shall include:	
An estimate of the cost of any community facilities or services that shall be extended or developed; and	N.A.
The amount of land allocated to various uses shall be calculated and compared to the projection of land needs.	5.2
The amount of land area thus allocated to various uses may not exceed projected needs as delineated in Part (c)(3)(A)(iv) – Projection of Future Land Needs	
(e) Tools for Managing Development	Section 10
(1) Guide for Land Use Decision-Making	10.1
(2) Existing Development Program	10.2
(3) Additional tools:	
(A) <i>Ordinances:</i>	10.2.A
(i) Amendments or adjustments in existing development codes required for consistency with the plan;	10.1
(ii) New ordinances or codes to be developed	N.A.
(B) <i>Capital Improvement Program (CIP)</i>	10.3
(C) <i>Acquisition Program</i>	10.3
(D) <i>Specific Projects to reach Goals</i>	9.1 – 9.5
	10.4
	App. E
(4) Action Plan/Schedule	App. E

Financial Support

The preparation of this document was financed, in part, through a grant provided by the North Carolina Coastal Management Program, through funds provided by the 1972 Coastal Zone Management Act (CZMA), as amended, which is administered by the Office of Ocean and Coastal Resource Management, and National Oceanic Atmospheric Administration (NOAA). The Town of Holden Beach also provided funding and staff support for the planning effort.

Acknowledgements

The creation of this land use plan began late in 2005 with a decision by Town leaders to commit the community's economic resources and the valuable time of citizens and staff to update the Town of Holden Beach's CAMA Land Use Plan. Funding and technical assistance for the planning process was obtained from the Department of Environment and Natural Resources (DENR) Division of Coastal Management (DCM). Additional technical assistance in the preparation of this document was obtained from the Cape Fear Council of Governments (COG) and Dr. Mark T. Imperial, an Assistant Professor at the University of North Carolina at Wilmington (UNCW) Master of Public Administration Program. Kristina Fischer, Jill Peleuses, and Courtney Pickett, graduate student interns from UNCW's MPA program also provided valuable assistance to the COG and Dr. Imperial in the preparation of this document. Special recognition and thanks go to the following individuals who supported the development of this land use plan:

- Mr. Scott Logel and the Cape Fear Council of Governments for their assistance with the mapping and land suitability analysis;
- Steve Wheeler and the department heads for their willingness to share knowledge of Holden Beach and to provide guidance in the development of the Land Use Plan;
- Jason Walker, Heather Finnell, and Rhonda Wooten for their staff support and assistance throughout the planning process;
- Department heads and staff for their willingness to share their knowledge of the operation of the Town of Holden Beach with the Land Use Plan Steering Committee;
- All Land Use Plan Steering Committee Members who willingly donated their time and expertise to the development of the Land Use Plan Update; and,
- All members of the public who participated in the June 22, 2006 and May 22, 2007 Public Workshops and provided comments to the Land Use Plan Steering Committee.

Acronyms Used In the Report

AEC	Areas of Environmental Concern
CAMA	Coastal Area Management Act
CFCC	Cape Fear Community College
COE	Corps of Engineers, United States
CRAC	Coastal Resource Advisory Committee
CRC	Coastal Resource Commission
CRS	Community Rating System
CZMA	Coastal Zone Management Act
DCM	Division of Coastal Management
DENR	Department of Environment and Natural Resources
DWR	Division of Water Resources
DWQ	Division of Water Quality
EMS	Emergency Medical Service
EMT	Emergency Medical Technician
ETJ	Extraterritorial Jurisdiction
FAR	Floor Area Ratio
FEMA	Federal Emergency Management Agency
GIS	Geographic Information System
HQW	High Quality Waters
ICWW	Intracoastal Waterway
LPO	Local Permit Officer
LSA	Land Suitability Analysis
LUP	Land Use Plan
LUPSC	Land Use Plan Steering Committee
MG	Million Gallons
MGD	Millions of Gallons per Day
MHWL	Mean High Water Line
MLWL	Mean Low Water Line
MS4	Municipal Separate Storm Sewer System
NC	North Carolina
NCAC	North Carolina Annotated Code
NCDOT	North Carolina Department of Transportation
NFIP	National Flood Insurance Program
NPDES	National Pollutant Discharge Elimination System
NSW	Nutrient Sensitive Waters
NPS	Nonpoint Source
ORW	Outstanding Resource Water
OSDS	Onsite Sewage Disposal System
PL	Public Law
SW	Swamp Waters
UNCW	University of North Carolina Wilmington
U.S.	United States

Vision Statement

Holden Beach should utilize available resources to maximize its full potential (within local, state and federal guidelines) and strive to be a inclusive, wholesome family community that continuously focuses its present and long-range planning, economic and developmental efforts to protect and sustain:

- Its recreational beach;
- Its residential character and natural resources; and,
- The supporting services of the Town (public and private) for the next generation of Town property owners and residents.

Executive Summary

An essential feature of the 1974 Coastal Area Management Act (CAMA) is the requirement that each coastal county prepare a land use plan that is updated every five years. The Town of Holden Beach recognizes the benefit of land use planning and has chosen to create its own land use plan rather than be folded into Brunswick County's plan. At nearly every Town Council and Planning Board meeting, decisions are made concerning zoning, variances, location of buildings, and allocation of funds for projects. Holden Beach's Land Use Plan provides guidance to local decision-makers to achieve the long-term vision for the community as articulated in previous plans. This allows local decision makers to be proactive rather than reactive and helps maintain Holden Beach as one of the finest family oriented beaches on the East Coast of the United States. This plan builds on the previous land use plans prepared by Holden Beach in 1980, 1985, 1990 and 1997. It encompasses all geographic areas in the community (there is no extraterritorial jurisdiction). It also considers issues pertaining to future land use and development and natural resource protection. The plan is long range in nature and looks beyond current issues to address potential future land use and environmental issues over the next ten to 15 years.

This plan, *The Town of Holden Beach 2009 CAMA Land Use Plan: Core Plan*, was prepared in accordance with newly promulgated guidance by DCM entitled *Technical Manual for Land Use Planning*. The planning process analyzed data on the economy, population, land use, land suitability, and natural systems of Holden Beach. The planning effort also updated the Town's Geographic Information System (GIS) and developed a series of maps contained in Appendix A. Finally, the policies contained in Holden Beach's *Land Use Plan 1997 Update* were analyzed in light of the Division of Coastal Management's (DCM's) new guidance on preparation of local land use plans and the data contained in this report. This analysis is presented in a series of tables contained in Appendix B. Appendix C contains the environmental composite and land suitability analysis maps required pursuant to DCM's new land use planning guidelines.

Planning Process

The town of Holden Beach designated a 6 member Land Use Plan Steering Committee (LUPSC) as the lead planning group. **Its members included:** Mayor Pro Tem; one member of the Board of Commissioners; two members from the Planning and Zoning Board; and, two members appointed by the Board of Commissioners to represent the public. The LUPSC met monthly during the planning process with all meetings open to the public and advertised in compliance with NCGS 143-318.9 to 143-218.18. Meeting agendas, minutes, and other important documents related to the

Planning Issues and Concerns

<p>Land Development</p>	<ul style="list-style-type: none"> ▪ Maintain housing density and lot sizes ▪ Restrict high-rise and multi-family development ▪ Keep existing height requirements ▪ Determine the appropriate balance between residential and commercial development ▪ Determine how to respond to large-scale development proposals on the mainland side of the ICWW
<p>Infrastructure Carrying Capacity</p>	<ul style="list-style-type: none"> ▪ Improving traffic flow onto the Island ▪ Examining the impact that future growth may have on traffic ▪ Address the flooding problems on Ocean Blvd. ▪ Explore the feasibility of installing a traffic light at the base of the bridge to improve traffic flow in the summer months ▪ Using bike paths or other steps to encourage more pedestrian traffic
<p>Public Access</p>	<ul style="list-style-type: none"> ▪ Identify possible ways to expand facilities (bathrooms, showers, etc.) and services for beachgoers at some access sites or other locations ▪ Determine if additional access sites are warranted ▪ Determine if additional parking is needed for beachgoers ▪ Improving boat ramp or additional launching facilities for boaters ▪ Improving parking associated with the boat ramp ▪ Improving public access along the ICWW and identifying possible enhancements such as a fishing or crabbing pier ▪ Address the issue of building clubhouses and shuttle services for off island beachgoers ▪ Possible uses of the 40-acre site owned by the town on the ICWW
<p>Natural Hazards</p>	<ul style="list-style-type: none"> ▪ Protecting and preserving current building setbacks and restrictions to prevent further encroachment in hazard areas ▪ Continuing to protect dunes and preserve their ability to minimize potential storm damage ▪ Nourishing the beach on a regular basis to minimize impacts that beach erosion has on property owners ▪ Ensure that the town takes the proper steps to be prepared in the event of a major storm
<p>Water Quality & Natural Resources</p>	<ul style="list-style-type: none"> ▪ Protecting and preserving water quality by addressing NPS pollution ▪ Protecting and preserving natural habitat and conservation areas when possible ▪ Improving storm drainage where possible

planning process were also posted on the Town's website.

The process took place in a series of iterative steps. A series of existing and emerging conditions were identified by examining the Town's current plans, discussions with Town staff, input from the public at public workshops, hearings, and LUPSC meetings, and the analysis of the data contained within the plan. These issues were categorized into five broad categories

- Land Development
- Infrastructure Carrying Capacity
- Public Access
- Natural Hazards
- Water Quality and Natural Resources

The LUPSC also adopted the following vision statement for the Town to guide the development of the Town's Land Use Plan Update:

Holden Beach should utilize available resources to maximize its full potential (within local, state and federal guidelines) and strive to be a inclusive, wholesome family community that continuously focuses its present and long-range planning, economic and developmental efforts to protect and sustain:

- Its recreational beach;
- Its residential character and natural resources; and,
- The supporting services of the Town (public and private) for the next generation of Town property owners and residents.

During Phase II of the planning process, the steering committee turned its attention to developing the policies and recommended actions contained in Section 9. During the planning process, the policies and actions recommended in the *1997 CAMA Land Use Plan Update* were used as the starting point for discussion. They were then modified based on LUPSC discussions, public input, and the technical analysis embodied in the Phase I report (e.g., analysis of existing conditions and land use, land suitability analysis, development of GIS maps, etc.). The draft policies were further modified based on a public workshop on May 22, 2007 where the public had an opportunity to provide input on the proposed policies and recommended actions. The end result of this process was the following set of goals, objectives, policies, and recommended actions.

Plan for the Future

Land Use and Development

Goal 9.1: Adopt and apply local policies that balance protection of the natural resources and fragile areas with economic development.

Objective 9.1.A: Manage growth and development while protecting the environment to ensure that the Town remains an inclusive, wholesome family community that maintains its residential character, natural resources, and its recreational amenities.

Policy 9.1.A.1: New Development: All new development and redevelopment will adhere to the Town’s building and development regulations and to the density requirements set forth in the Zoning Ordinance.

Policy 9.1.A.2: Height Limits: The Town shall limit building height to 35 feet.

Policy 9.1.A.3: Aesthetics: The Town will work with developers to ensure that development is done in a manner that is consistent with existing aesthetic and architectural characteristics.

Policy 9.1.A.4: Commercial Development: The Town does not support increasing the size of the commercial zone and will limit new commercial development to the existing commercial zone. The Town supports the location of tourism related establishments in commercial zones such as restaurants and retail shops.

Policy 9.1.A.5: Beach Clubhouses: Beach clubhouses that provide services to visitors shall only be permitted in existing commercial zones. They are prohibited in all other areas.

Policy 9.1.A.6: Mixed Use: The Town supports the concept of appropriately sized proposals for mixed use development in existing commercial zones in order to revitalize these areas and preserve the economic viability of existing commercial property on the Island. The height of mixed use projects is limited to 35 feet.

Recommended Action 9.1.A.6.a: The Town shall review its ordinances and determine whether changes are needed to facilitate proposals for mixed use development projects in commercial zones.

Policy 9.1.A.7: Development Impacts on Conservation Zones: New development and redevelopment shall not be permitted which would act to degrade the quality of natural and scenic resources at Holden Beach. The Town will enforce state and local regulations involving development in or adjacent to conservation zones.

Recommended Action 9.1.A.7.a: The Town shall work with other public and nongovernmental organizations (e.g., Nature Conservancy) to preserve existing green space and acquire or otherwise protect conservation areas, and other sensitive natural areas to ensure their long-term protection.

Recommended Action 9.1.A.7.b: The Town shall work with willing land owners and encourage them to gift lands to the Town that can be used for public access, recreation, or conservation purposes.

Policy 9.1.A.8: Development of Sound and Estuarine Areas: All estuarine islands and spoil islands are subject to the conservation (C district) provisions of the Town's zoning ordinance.

Policy 9.1.A.9: Industrial Impacts: The Town will prohibit any form of industry other than those associated with tourism.

Policy 9.1.A.10: Marinas: The Town will prohibit the development of new marinas on the island. The Town will not allow upland excavation for marina basins.

Policy 9.1.A.11: Dry Stack Storage: The Town will not approve the dry stack storage of boats on the Island.

Policy 9.1.A.12: Tourism: The Town will support and promote tourism as an essential economic activity having direct positive impact of future development.

Recommended Action 9.1.A.12.a: The Town will take several steps to promote tourism including:

- Supporting local Chambers of Commerce;
- Use a portion of the occupancy tax revenue to support the efforts of the Tourism Development Authority (TDA) to grow the tourism market; and,
- Supporting advertising campaigns designed to attract visitors.

Policy 9.1.A.13: Future Development on the Mainland: The Town shall work with the County and other local jurisdictions to minimize the density of development in inland areas along the ICWW, tributaries that drain to the ICWW, and the road corridors that lead to the bridge to Holden Beach.

Recommended Action 9.1.A.13.a: The Town should form an ad hoc committee to explore whether the establishment of an extraterritorial jurisdiction could improve the Town's ability to limit the density of development along the ICWW and the road corridors leading to the Island. The committee will also educate the public about the consequences of an ETJ and the fact that residents in these areas do not get to vote and that there is no obligation to ever annex these properties. The purpose of establishing the ETJ

would solely be for limiting the development likely to occur on the mainland adjacent to Holden Beach.

Policy 9.1.A.14: Public Participation: The Town will assure that all segments of the population in the planning area are informed about land use decisions and have an opportunity to participate in planning and decision making processes.

Recommended Action 9.1.A.14.a: The Town will continue to utilize standing committees and boards to involve the public in planning decisions whenever practicable.

Recommended Action 9.1.A.14.b: The Town will continue to utilize the Town’s website, cable access channel, and other methods to keep citizens informed of planning and land use decisions whenever practicable.

Policy 9.1.A.15: Commitment to State and Federal Programs: The Town supports state and federal programs such as CAMA, beach nourishment, erosion control, public access, highway improvements, dredging (channel maintenance and beach nourishment), and other similar programs provided the Town finds these programs to be appropriate and consistent with Town Policies.

Policy 9.1.A.16: Policy Review: The Town will routinely review the policy and implementation section of this Land Use Plan to determine whether changes to the policies and recommended actions are needed.

Infrastructure Carrying Capacity

Goal 9.2: To ensure that public infrastructure systems are appropriately sized, located, and managed to serve the Town’s population while ensuring the quality and productivity of the AEC’s and other fragile areas are protected and restored.

Objective 9.2.A: Ensure that the location and capacity of public infrastructure is consistent with the Town’s growth and development goals.

Policy 9.1.A.1: Provision of Town Services: The Town will continue to provide a range of services to residents within the incorporated areas within the Town. Connection to water and sewer lines will be at the expense of the developer. If water or sewer facility upgrades or expansions are required for new development, the needed improvements would be at the expense of the developer.

Recommended Action: 9.1.A.1: The Town will complete the planned renovations to its Town Hall facilities in order to provide additional space for its departments to provide services to the growing year round and seasonal population on the Island.

Policy 9.2.A.2: Operation of Water Facilities: The Town shall ensure efficient, uninterrupted operation of water facilities for Town residents.

Recommended Action 9.2.A.2.a: The Town shall begin planning for the replacement of aging water lines and investigate whether other improvements in its water supply system are needed to serve a growing seasonal population.

Recommended Action 9.2.A.2.b: The Town will continue to explore the feasibility of potentially transferring the town-owned water distribution system to Brunswick County but will only do so when it results if it will improve service delivery for Town residents.

Recommended Action 9.2.A.2.c: The Town will continue to encourage homeowners to adopt practices that lead to water conservation.

Policy 9.2.A.3: Operation of Wastewater Facilities: The Town shall ensure efficient, uninterrupted operation of wastewater facilities for Town residents.

Recommended Action 9.2.A.3.a: The Town shall maintain an ordinance that requires all new development and redevelopment as well as existing development to tie into the central sewer system.

Recommended Action 9.2.A.3.b: Town officials should encourage the County to provide additional sewage treatment to residents outside of town boundaries.

Policy 9.2.A.4: Potable Water Supply: The Town supports and encourages the protection of the potable water supply well sites and river in-flow area in the planning area and in adjacent areas within Brunswick County.

Policy 9.2.A.5: Soils and Septic Tank Suitability: Growth and development requiring septic systems will not be permitted in unincorporated areas along the ICWW or along the road corridors leading to Holden Beach where septic tanks will not function. All septic tanks must be in compliance with State Health Regulations as administered by the Brunswick County Health Department. The Town will provide wastewater treatment services only to incorporated areas within the Town.

Policy 9.2.A.6: Bridge & Road Improvements: The Town supports State and Federal bridge and road improvement programs and efforts to reduce traffic congestion on the Island and along the road corridors leading to the bridge.

Recommended Action 9.2.A.6.a: Town officials will continue to work with NCDOT to help improve traffic conditions both on the island and in surrounding areas as a result of a growing seasonal population, and growing population on the mainland in areas near Holden Beach.

Recommended Action 9.2.A.6.b: Town officials will work with developers to incorporate transportation improvements into new commercial and residential development projects when applicable.

Policy 9.2.A.7: Maintaining Adequate Fire Protection: The Town will provide support to police and volunteer fire services as needed to keep pace with the demands of the growing seasonal population.

Policy 9.2.A.8: Bicycles: The Town supports the use of bicycles and street legal golf carts as a functional means of reducing automobile traffic and parking demands at the beach.

Policy 9.2.A.9: Rezoning Analysis: The Town shall conduct an analysis of infrastructure before rezoning parcels to allow for more intensive development or changing development standards to allow for higher densities and intensities. This analysis shall determine if existing infrastructure can provide adequate service to the Town as a whole in light of the proposed re-zonings or development standard changes. The infrastructure analysis shall review road capacity, water and sewer capacity, fire flow capacity, public access and other infrastructure demands related to future development.

Public Access and Recreation

Goal 9.3: Maximize public access to the beaches and public trust waters of the Town of Holden Beach and maximize recreational opportunities for residents and visitors.

Objective 9.3.A: Access for All Segments of the Community: Implement policies and recommendations that assure satisfactory access to all segments of the community including persons with disabilities and provide recreational opportunities for residents and visitors alike.

Policy 9.3.A.1: Existing Access Facilities: The Town supports public access to the oceanfront and other waterways and will maintain and improve existing public access facilities. Where possible, the Town should seek funding from federal, state, and county sources to fund these improvements.

Recommended Action 9.3.A.1.a: The Town shall continue to identify ways to improve existing access sites and improve handicapped access.

Policy 9.3.A.2: Expand Public Access Facilities: The Town will continue to work towards expanding public access to the ocean and ICWW and seek federal, state, or county funds to develop new public access and recreation facilities.

Recommended Action 9.3.A.2.a: The following are considered to be priorities for new public access facilities:

- Identify suitable locations along the ICWW for public access facilities and pocket parks. Possibilities include the ends of Ferry Road, Sandspur Street, Sand Dollar Street, Swordfish Street, and Sailfish Street.
- Identify locations along the beachfront where landowners may be willing to let the Town assume responsibility for maintaining an access site and develop these sites for use by the public.
- Explore the feasibility of using the Island near the 800 block parking lot owned by the Town as a passive recreation facility with environmental education trails.

Policy 9.3.A.3: Signage: The Town shall improve the signage of existing public access sites located along the sound.

Policy 9.3.A.4: Public Acquisition of Hazardous Areas: The Town should consider purchasing parcels located in hazard areas or rendered unbuildable by storms or other events, for the purpose of public water access and conservation of open space if funding, including State or federal funding, is available.

Policy 9.3.A.5: Public Access Parking: The Town supports the development of additional parking for public access sites. The Town also supports the establishment of “No Parking” zones along the selected road right-of-way, and public frontal dune walkways and ramps at selected points along the beach front to improve pedestrian and bicycle safety.

Recommended Action Item 9.3.A.5.a: The Town supports the development of a privately operated off-island parking area to reduce vehicle traffic and congestion on the island.

Policy 9.3.A.6: Pedestrian and Bicycle Access: The Town encourages pedestrian and bicycle access along the Island to help alleviate traffic problems and improve public access to the shoreline.

Recommended Action 9.3.A.6.a: The Town will pursue federal and state grant opportunities to construct sidewalks, walkways, and bike lanes at strategic locations on the Island.

Policy 9.3.A.7: Supporting Federal and State Programs to Expand Access: The Town is committed to county, state, and federal programs that maximize public access to the beaches and public trust waters of the Town of Holden Beach. The programs include but are not limited to the Coastal Area Management Act, the North Carolina Public Beach Access Program, Federal channel maintenance and inlet projects and beach nourishment projects.

Objective 9.3.B: Reduce User Conflicts: The Town will manage conflicting uses of its beaches and public trust waters.

Policy 9.3.B.1: Dune Protection: Public pedestrian access is limited to designated dune crossover areas in order to minimize damage to dunes and vegetation. Walking on dunes or acting in any manner that causes damage to dunes and vegetation is against state and local ordinances. The Town, through its CAMA minor permit program, may allow the construction of private crossovers over the dune structures for access to the beach at private access points.

Policy 9.4.B.2: Off-Road Vehicles: The Town will not allow off-road vehicles on the dunes or on the shoreline area, with the exception of public service or emergency vehicles and inherited commercial fishing right access.

Policy 9.3.B.3: Floating Homes: The Town will not approve floating home development on the Island.

Policy 9.3.B.4: Moorings: Commercial seafood vessel dockage along the ICWW is deemed acceptable. All moorings in that regard must conform to CAMA and State regulations.

Policy 9.3.B.5: Maintenance of Navigation Channels: Holden Beach supports the proper maintenance of channels, particularly the ICWW due to the impact of this channel on commercial and recreational fisheries and general boating.

Policy 9.3.B.6: Blocking or Impairing Navigational Channels: Projects that would directly or indirectly block or impair existing navigational channels shall be prohibited. This includes but is not limited to projects that deposit spoils below mean high water, extend piers beyond the established pier head line or any projects determined to be detrimental to navigation of the public trust waters.

Policy 9.3.B.7: Dredging to Support Commercial and Sport Fishing Facilities: In order to expand Holden Beach's sport and commercial fishing, the Town will permit private and public dredging activities which will positively affect those industries when all federal, State, and local permits are obtained.

Policy 9.3.B.8: Safe Boating: The Town shall seek to increase public awareness of safe boating rules.

Policy 9.3.B.9: Operation of Jet Skis and Personal Watercraft: The Town shall seek to ensure the responsible use of Jet Ski's and other similar personal watercraft in the public trust waters of Holden Beach.

Water Quality and Natural Environment

Goal 9.4: Maintain and where possible improve the natural environment and water quality within and adjacent to Holden Beach.

Objective 9.4.A: Protect the Natural Environment: The Town shall take actions designed to protect and where possible enhance and restore the sensitive natural resources located in and adjacent to the Town of Holden Beach.

Policy 9.4.A.1: Areas of Environmental Concern. The Town will support and enforce through its CAMA Minor Permitting capacity, the State policies and permitted uses in AECs. Acceptable uses within the individual AECs of the estuarine system shall be those requiring water access or those that cannot function elsewhere. Such uses shall be consistent with the general use standards for coastal wetlands, estuarine waters, and public trust areas stated in 15NCAC subchapter 7H.

Policy 9.4.A.2: Coastal Wetlands: Acceptable land uses in Coastal Wetlands may include utility easements, fishing piers, and docks. Examples of uses not permitted include restaurants, businesses, residences, apartments, motels, hotels, parking lots, private roads, and highways.

Policy 9.4.A.3: Estuarine Shorelines: Residential, recreational, research, educational, and commercial land uses are all appropriate types of use along the estuarine shoreline provided all standards of 15NCAC Subchapter 7H relevant to estuarine shoreline AECs are met, and the proposed use is consistent with the policies set forth in this plan.

Policy 9.4.A.4: Ocean Hazard Areas The Town supports State policies for ocean hazard areas as set forth in Chapter 15NCAC subchapter 7H of the State CAMA regulations. Suitable land uses in ocean hazard areas include ocean shoreline erosion control activities, dune establishment and stabilization. Residential, commercial and recreational land uses and parking lots for beach access are also acceptable uses in ocean hazard areas provided they meet all general and specific standards of 15NCAC: 7H.

Policy 9.4.A.5: Appropriate Land Use in Areas of Environmental Concern: The Town will conserve and manage estuarine waters, coastal wetlands, public trust areas, and shorelines, as an interrelated group of AECs, so as to safeguard and perpetuate their biological, social, economic, and aesthetic values and to ensure that development occurring within the AECs is compatible with natural characteristics so as to minimize the likelihood of significant loss of private property and public resources.

Policy 9.4.A.6: Development in Environmentally Fragile Areas: The Town will properly and effectively manage development inside or adjacent to freshwater

and coastal wetlands, hazardous areas, and other environmentally fragile areas to minimize their impact in accordance with all applicable federal, state, and local regulations.

Policy 9.4.A.7: Development of Sound and Estuarine System Islands: After carefully and thoroughly reviewing proposals for development on estuarine and spoil “islands”, the Town will allow residential development only, and only if consistent with the Town’s Zoning Ordinance and Subdivision Regulations. The development of these areas will be given preliminary approval by the Town and property owners must obtain all State and federal permits before seeking final review and approval for development by the Town.

Policy 9.4.A.8: Prime Wildlife Habitats: The Town will continue to protect its prime wildlife habitats by enforcing the CAMA major and minor permitting program.

Policy 9.4.A.9: Turtle Nesting Areas: The Town shall work to protect habitat areas used for turtle nesting.

Policy 9.4.A.10: Damage to Existing Marshes by Bulkhead Installation: Maintenance and replacement of existing bulkheads will be permitted provided that it meets the requirements of the COE and CAMA.

Policy 9.4.A.11: Permanent Erosion Control Structures on Ocean Shorelines: Oceanfront bulkheads, groins, seawalls or other shoreline hardening erosion control structures are not permitted by the State of North Carolina and will not be allowed on Holden Beach. However, if allowed by the State of North Carolina, the Town may consider other innovative methods of shoreline stabilization, particularly in inlet hazard areas, provided the property owner can demonstrate the potential value of the device and provide evidence that the installation of these innovative methods will not cause erosion to adjoining property owners.

Recommended Action 9.4.A.11.a: The Town recommends that the CRC reconsider its ban on permanent erosion control structures in Inlet Hazard Areas to better protect public infrastructure, private property, and public safety. The CRC should modify its policies to make allowances for alternative stabilization methods in inlet hazard areas to avoid the repeated public expenditures and environmental disturbances associated beach nourishment, the only alternative erosion control measure permitted pursuant to CAMA regulations.

Policy 9.4.A.12: Use of Package Treatment Plants: Package treatment plants are not permitted in the incorporated area. In unincorporated areas along the ICWW and waterways that drain to coastal waterways, State-approved alternative systems are discouraged by the Town.

Policy 9.4.A.: Dredging: The Town seeks to control dredging so it does not directly or indirectly increase beach or waterway erosion on the island. In all dredging cases, spoil resulting should be located on the island so as to mitigate the effects of past erosion or to prevent additional erosion.

Policy 9.4.A.: Solid Waste Disposal & Recycling: The Town supports measures to recycle and reduce the amount of soil waste generated by residents, visitors, and businesses on the Island.

Objective 9.4.B: Support Commercial and Recreational Fisheries: The Town will work toward the protection and enhancement of North Carolina's sport and commercial fisheries industries.

Policy 9.4.B.1: Commercial and Recreational Fisheries Development: Development or any activity which will adversely affect coastal and estuarine waters will be prohibited. Those structures which support commercial and recreational fisheries will be allowed to be placed adjacent to coastal and estuarine waters if all required permits are obtained. In the design, construction and operation of water dependent structures, efforts will be made to mitigate negative effects on water quality and fish habitat, as determined by 15A NCAC 7H, Resources Commission. The developer and/or owner will bear the cost of any such mitigation.

Policy 9.4.B.2: Commercial and Residential Fisheries: The Town supports federal and state projects which increase the productivity of coastal and estuarine waters. Projects such as dredging to increase flushing along tidal waters, oyster reseeded programs, and properly constructed artificial reefs will be supported.

Policy 9.4.B.3: Shellfishing Waters: The Town supports and promotes the activities of the State's Shellfish Management Program. The Town promotes improvements in estuarine water quality through its sewer system, implementation of its stormwater management ordinance, and through CAMA's permitting regulations.

Policy 9.4.B.4: Restrictions on Menhaden Fishing: The Town supports the efforts of many coastal communities to restrict operation of Menhaden fishing activities to an area outside one nautical mile of the Holden Beach coastline and to ban gill net fishing throughout the year.

Policy 9.4.B.5: Support for N.C. Division of Marine Fisheries: The Town supports the N.C. Division of Marine Fisheries' efforts to develop regulations and policies that help protect ocean and estuarine water quality.

Objective 9.4.C: Improving Water Quality: Reduce pollutant loadings in stormwater generated within the Town of Holden Beach.

Policy 9.4.C.1: Sewage Treatment: The Town will continue to improve its wastewater treatment within the incorporated area as a means of protecting and improving surface water quality.

Policy 9.4.C.2: Surface Water Quality: The Town shall continue to seek improved stormwater runoff and take actions that protect and enhance the water quality of the estuarine and ocean system.

Recommended Action 9.4.C.2.a: The Town will work to implement the Lockwood Folly Roundtable Strategies identified by Brunswick County in partnership with the North Carolina Coastal Federation and North Carolina Ecosystem Enhancement Program.

Policy 9.4.C.3: Stormwater Management: The Town will continue to implement its stormwater management ordinance to ensure that all new commercial and residential development treats stormwater onsite using appropriate BMPs.

Policy 9.4.C.4: Reduction of Existing Stormwater Discharges: The Town shall continue to utilize structural and non-structural BMPs designed to reduce the quantity and increase the quality of existing stormwater discharges.

Recommended Action 9.4.C.4.a: When state roads are repaired or resurfaced, the Town shall require the Department of Transportation (DOT) to use infiltration systems and other structural or nonstructural BMPs necessary to treat stormwater generated from road surfaces. When town roads are repaired or resurfaced, the Town shall seek state funding to assist with its efforts to treat stormwater generated by road surfaces using infiltration devices and other structural and nonstructural BMPs.

Recommended Action 9.4.C.4.b: The town shall continue its efforts to educate homeowners about actions they can take to reduce stormwater runoff from their property.

Policy 9.4.C.5: Stormwater Retrofits for Existing Development: Where appropriate, the Town shall use economic incentives to encourage existing residential and commercial development to retrofit properties and install structural or nonstructural BMPs that reduce stormwater runoff.

Policy 9.4.C.6: Stormwater Discharges From Municipal Sources: Where practicable, the Town shall eliminate stormwater discharges resulting from municipal activities. Where elimination is not possible, the Town shall mitigate the sources of stormwater discharges to the maximum extent practicable.

Recommended Action 9.4.C.7: The staff of the Public Works Department shall expand its efforts to identify and eliminate stormwater discharges resulting from the Town's municipal activities.

Hazard Mitigation

Goal 9.5: Protect public health and safety from the damaging effects of storm surges, wave action, flooding, high winds, and erosion associated with hurricanes, severe weather, and other hazards.

Objective 9.5.A: Protect Against Damage from Hurricanes, Severe Weather or Other Hazards: The Town will be proactive in its efforts to minimize damage and threats to public health and safety associated with hurricanes, severe weather, and other hazards and work to implement the *Holden Beach Hazard Mitigation Plan*.

Policy 9.5.A.1: Development in Hazardous Areas: The Town shall use a variety of methods, including CAMA setback requirements and the Flood Prevention Ordinance, to discourage high-density uses and large structures within the 100-year floodplain, erosion-prone areas, and other locations susceptible to hurricane and flooding hazards.

Policy 9.5.A.2: Flooding and Storm Surge: As a participant in the National Flood Insurance Program, the Town supports hazard mitigation and participates in the regular phase of the insurance program. The Town also supports continued enforcement of the CAMA and 404 wetlands development permit processes in areas potentially susceptible to flooding.

Policy 9.5.A.3: Flood Insurance: The Town shall take actions necessary to reduce the cost of flood insurance to property owners by maintaining or improving its status pursuant to the Community Rating System (CRS).

Recommended Action 9.5.A.3.a: In order to help lower the costs of flood insurance the Town should consider whether adding a freeboard requirement will help lower flood insurance costs for residents.

Policy 9.5.A.4: Wave Action and Shoreline Erosion: The Town supports the CAMA development permit process for estuarine shoreline areas and the requisite development standards which encourage both shoreline stabilization and facilitation of proper drainage.

Policy 9.5.A.5: High Winds: The Town supports enforcement of the N.C. State Building Code. The Town will continue to enforce the State Building Code on wind resistant construction with design standards of 135 mph wind loads.

Policy 9.5.A.6: Relocation of Structures: Structures may be moved off property subject to erosion and relocated elsewhere so long as that movement meets the requirements of town ordinances and building codes.

Policy 9.5.A.7: Lockwoods Folly Inlet: The Town strongly supports the efforts of the U.S. Army Corps of Engineers (COE) to stabilize the Lockwoods Folly Inlet, and to develop an engineering plan to nourish a large percentage of beach areas on the island.

Policy 9.5.A.8: Evacuation Plans: The Town will provide for an orderly and timely evacuation of Town property owners and visitors during a declared emergency by following established procedures set forth by the Holden Beach Evacuation Plan and by the Brunswick County Emergency Management Agency.

Recommended Action 9.5.A.8.a: The Town shall build an emergency operations center on land it owns on the mainland. The emergency operations center will be used in the event the Island has to be evacuated or the bridge is closed due to high winds.

Policy 9.5.A.9: Evacuation Shelters: Ensure that all evacuation shelters are well-publicized, accessible, and meet national standards for public safety and supplies.

Policy 9.5.A.10: Land Acquisition: The town supports the acquisition of property that is unsuitable for development due to coastal hazards when such acquisition serves a useful public purpose such as access to the beach or sound. Acquisition of appropriate properties is also encouraged by federal and state agencies.

Recommended Action 9.5.A.10.a: The Town shall investigate outside funding sources for land acquisition and shall encourage gifts and donations for tax credits as a mitigation measure for future storm events.

Policy 9.5.A.11: Minimize Potential Fire Damage: The Town will continue its efforts to reduce the risk of damage from urban fires as a result of future development.

Policy 9.5.A.12: Beach Nourishment: The Town supports all beach nourishment programs. Nourishment activities must be done in an environmentally sensitive fashion and with respect to impacts on surrounding properties.

Recommended Action 9.5.A.12.a: The Town should continue to work with the COE to obtain approval for a 50-year plan of work to stabilize shoreline and inlet areas through techniques such as periodic beach nourishment of eroded areas.

Recommended Action 9.5.A.12.b: The Town in cooperation with the County should develop a strategy for the Town to become financially self sufficient so that regular beach nourishment projects can still be funded in the event that federal and state funding for beach nourishment projects is reduced.

Policy 9.5.A.13: Bulldozing: The practice of bulldozing on the beach shall be discouraged in non-emergency situations.

Policy 9.5.A.14: Hurricane Preparedness Plan: The Town shall update its Hurricane Preparedness Plan on an annual basis each spring in concert with county and state emergency management officials, and with input from Town residents. The plan shall encompass pre-storm and immediate post storm activities and policies of the town. Issues addressed in the Hurricane Preparedness Plan should include:

- Criteria for issuing building permits in a post storm setting
- Orderly issuance of building permits in a post-storm setting
- Sequence of restoration for public utilities and services
- Public infrastructure repair and replacement
- Beach re-entry
- Debris pick-up
- Damage assessment
- Evacuation procedures
- Recovery Task Force membership and duties
- Public health and safety issues

Policy 9.5.A.15: Public Education: Ensure that the public is aware of the risks of different types of natural hazards in order to reduce their personal exposure to natural hazards.

Recommended Action 9.5.A.15.a: The Planning Department shall implement a public education program designed to help inform the public about their exposure to natural hazards and actions they can take to mitigate potential damage to public health, safety, and property from natural disasters. This includes, but is not limited to:

- Ensure local libraries maintain documents about flood insurance, flood protection, floodplain management, and natural and beneficial functions of floodplains. Many documents are available free of charge from the Federal Emergency Management Agency (FEMA);
- Encourage builders, developers and architects to become familiar with the NFIP's land use and building standards by attending annual workshops presented by the NC Division of Emergency Management (DEM);
- Provide local real estate agents with handouts advising potential buyers to investigate potential flood hazards for the property they are considering purchasing;

- Advertise the availability of flood insurance on an annual basis; and,
- Post hazard related information on the Town's website and distribute appropriate educational materials.

Objective 9.5.B: Post-Storm Recovery: In the period following a hurricane, severe weather event, or other disaster, the Town will work as quickly as possible to restore essential services related to public health, safety and welfare.

Policy 9.5.B.1: Post Disaster Recovery: The Town will follow the Hurricane Preparedness Plan for Holden Beach in coordination with the Brunswick County Emergency Services Agency.

Policy 9.5.B.2: Redevelopment of Developed Areas: Homes and other structures may be redeveloped (rebuilt) on the same property as a result of coastal storms or other reasons, so long as they are not damaged beyond 50% of their value. If damages exceed 50% of value, then redevelopment on the same property must meet town and state requirements pertaining to hazard setback. It is the Town's policy that density allowances for redevelopment areas conform to existing Town building and zoning requirements, the Future Land Use Map designations contained in Appendix D, and related provisions of the *Holden Beach Hazard Mitigation Plan*.

Policy 9.5.B.3: Removal of Damaged Structures: Homes damaged as a result of erosion or coastal storms may be considered a public nuisance and may be subject to removal at property owner expense.

Policy 9.5.B.4: Mutual Aid: The Town shall maintain established mutual aide agreements and where necessary develop new agreements to assist with post-storm event clean-up, damage assessment, and reconstruction activities.

Policy 9.5.B.5: Staging Schedule for Reconstruction and Repair: The staging schedule for the re-establishment of essential services and the reconstruction and repair of properties damaged in a storm event depends on the severity of the storm and the damage inflicted. The Town will work to restore essential services related to public health, safety and welfare first. Properties suffering minor damage will be issued permits as expeditiously as possible. Properties suffering major damage will generally be allowed to implement temporary protective measures designed to protect their property from further damage or to correct public safety problems.

Policy 9.5.B.6: Public Infrastructure Repair and Replacement: The Town shall maintain assessments of current infrastructure usage and need for expansion, repair, or replacement. Following major storm events, the Town will assess damage to public infrastructure at the earliest possible time. Damage that affects public health and safety will be corrected as soon as practicable. Damage to existing infrastructure will also be evaluated for potential opportunities for repair or expansion consistent with existing capital improvement and repair needs. Long

term repair or replacement of infrastructure will be prioritized based on resources available, impact on the integrity of the infrastructure, mitigation of future hazard situations, the Town's capital improvement program, and its *Hazard Mitigation Plan*.

Policy 9.5.B.7: Electrical Outages: The Town shall work to reduce the frequency of electrical outages and length of time such outages last after hurricanes and severe storm events.

Policy 9.5.B.8: Post-Storm Hazard Mitigation: Develop specific and timely recommendations for implementing hazard mitigation measures contained in the *Holden Beach Hazard Mitigation Plan* following a state or federally declared natural disaster.

Recommended Action 9.5.B.8.a: In the event that the President declares Holden Beach a disaster area, the Planning Department shall apply for funding from the Hazard Mitigation Grant Program (HMGP) for one of the top priorities listed in the Town's *Hazard Mitigation Plan*.

Definitions of Terms Used in Policies and Recommendations

Create: Bring about the desired goal, usually with Town staff and planning board involved at all levels from planning to implementation. It may involve the Town's financial assistance.

Continue: Follow past and present procedures to maintain desired goal, usually with Town staff involved at all levels from planning to implementation.

Encourage: To stimulate or foster a particular condition through direct or indirect action, the private sector, or through Town regulation, staff recommendations and decisions.

Enhance: Improve existing conditions by increasing the quantity or quality of desired features or current regulations and decisions towards a desired state through the use of policies and Town staff at all levels of planning. This could include financial support.

Identify: Catalog and confirm resource or desired item(s) through the use of Town staff and actions.

Implement: Actions that lead to the accomplishment of the plan's policies and recommended actions.

Maintain: Keep in an existing state or good condition the desired state of affairs through the use of Town policies, codes, boards, staff actions, and Town finances, if needed.

Prevent: Stop the described event through the use of appropriate Town policies, codes, boards, staff actions, and Town finances, if needed.

Promote: Advance the desired state through the use of Town policies, codes, boards, and staff actively involved in all aspects of planning. This may include financial support.

Protect: Guard against a deterioration of the desired state through the use of Town policies, regulations, staff, and if needed, financial assistance.

Provide: Take the lead role in supplying the needed financial and staff support to achieve the desired goal. The Town is typically involved in all aspects from planning to implementation to maintenance.

Shall: An officially adopted course or method of action that is construed to be mandatory. Exceptions should be rare.

Should: An officially adopted course or method of action intended to be followed in order to implement the plan's goals and objectives. Though not as mandatory as "shall", it is still an obligatory course of action unless clear reasons can be identified that an exception is warranted.

Strengthen: Improve and reinforce the desired goal through the use of Town policies, staff, and if necessary, financial assistance.

Sustain: Uphold the desired state through Town policies, decisions, financial resources, and staff action to achieve the desired goal.

Work: Cooperate and act in a manner through the use of Town staff, actions, and policies to create the desired goal.

Section 1

Introduction

1.0 Introduction

Coastal areas of the United States have experienced tremendous population growth and development since the 1960s. In response, the United States Congress passed the 1972 Coastal Zone Management Act (CZMA), as amended. The State of North Carolina established itself as a leader amongst the states by enacting the 1974 Coastal Area Management Act (CAMA). The overall objective of CAMA is to insure the orderly balanced use and preservation of our coastal resources on behalf of the people of North Carolina and the nation (NC PL 113-102A b4). Of particular importance, the Act:

- Defined North Carolina's Coastal Area to include its twenty coastal counties.
- Created the Coastal Resource Commission (CRC), a fifteen member body appointed by the Governor to create policy and pass rules governing development activity in the Coastal Area.
- Created the Coastal Resource Advisory Council (CRAC), a forty-five member advisory body that advises the CRC and works as a liaison between the CRC and local governments.
- Created the Division of Coastal Management (DCM), the division that carries out the policies of the CRC and CAMA.

An essential feature of CAMA is the requirement that each coastal county prepare a land use plan that is updated every five years. The Town of Holden Beach recognizes the benefit of land use planning and has chosen to create its own land use plan rather than be folded into Brunswick County's plan. At nearly every Town Council and Planning Board meeting, decisions are made concerning zoning, variances, location of buildings, and allocation of funds for projects. Holden Beach's Land Use Plan provides guidance to local decision-makers to achieve the long-term vision for the community as articulated in previous plans. This allows local decision makers to be proactive rather than reactive and helps maintain Holden Beach as one of the finest family oriented beaches on the East Coast of the United States. This plan builds on the previous land use plans prepared by Holden Beach in 1980, 1985, 1990 and 1997. It encompasses all geographic areas in the community (there is no extraterritorial jurisdiction). It also considers issues pertaining to future land use and development and natural resource protection. The plan is long range in nature and looks beyond current issues to address potential future land use and environmental issues over the next ten to 15 years.

This plan, *The Town of Holden Beach 2007 CAMA Land Use Plan: Core Plan*, was prepared in accordance with newly promulgated guidance by DCM entitled *Technical Manual for Land Use Planning*. The planning process analyzed data on the economy, population, land use, land suitability, and natural systems of Holden Beach. The planning effort also updated the Town's Geographic Information System (GIS) and developed a series of maps contained in Appendix A. Finally, the policies contained in Holden Beach's *Land Use Plan 1997 Update* were analyzed in light of the Division of Coastal Management's (DCM's) new guidance on preparation of local land use plans and the data contained in this report. This analysis is presented in a series of tables contained in Appendix B. Appendix C contains the environmental composite and land suitability analysis maps required pursuant to DCM's new land use planning guidelines.

1.0.A Organization of the Report

The 2007 CAMA Land Use Plan is organized into a series of sections. Section 2 addresses the community's aspirations and concerns. This section also identifies existing and emerging conditions and summarizes the issues discussed at a public workshop held June 22, 2006. Section 3 focuses on describing the Town of Holden Beach's population, housing, and economy to identify trends that potentially influence land use or impact natural resources. This section also presents a profile of the community and its key demographic characteristics as well as estimates of its projected year round and seasonal populations. Section 4 contains the natural systems analysis. It describes the Areas of Environmental Concern (AECs) found within and adjacent to Holden Beach. The section also describes other important natural features and flood zones. Section 5 analyzes existing land use and development while Section 6 analyzes the community facilities and Town services. Section 7 examines the Town's infrastructure carrying capacity and its adequacy to serve the year round population and the influx of summer residents and visitors. Section 8 contains a land suitability analysis required by DCM. Section 9 describes the plan for the future and the plan's goals, objectives, policies, and recommended actions. Section 10 describes the tools for managing development and the current development management program. It also summarizes some of the planned implementation efforts while the action plan and implementation schedule is described in greater detail in Appendix E. Finally, Section 11 contains the required policy analysis, which examines the consistency of the land use plan's policies and recommended actions and the future land use map contained in Appendix D. It also examines the consistency of the policies with the DCM's benchmarks for the management tools. A more detailed version of the required policy analysis is contained in Appendix F.

1.0.B How to Use This Plan

Holden Beach's CAMA Land Use Plan serves a variety of functions and the plan for the future contains a broad range of:

- ***Goals:*** Desired ends toward which policies and programs of the Land Use Plan are directed. Many of the goals reflect requirements set forth in the Division of Coastal Management's (DCM's) Coastal Resource Commission (CRC) guidelines;
- ***Objectives:*** More specific and measurable than the general goals and in some cases a goal has multiple objectives;
- ***Policies:*** A consistent set of principles or guidelines for making a variety of local decisions designed to accomplish the goals and objectives. These policies guide decisions by the Board of Commissioners, its appointed boards, and staff.
- ***Recommended Actions:*** Specific actions that can be taken to implement and advance the plan's policies. Many of these recommended actions are non-regulatory in nature and will be addressed through the Town's capital improvement program (CIP) or through subsequent planning efforts.

Collectively, the goals, objectives, policies, and recommended actions provide a long range planning function but they also help guide day to day operations. The daily functions relate primarily to the decisions and actions of elected and appointed officials and the Town's administrative staff.

For the Board of Commissioners, the CAMA Land Use Plan contains Town policies and provides a guide when making decisions regarding future land use and development, public access, protecting the environment, mitigating natural and manmade hazards, or ensuring that the Town's infrastructure and services are adequate to serve its year round population and the influx of seasonal visitors. While the CAMA Land Use Plan's policies do not have the same status as a local zoning ordinance, except in matters related to development or land uses within Areas of Environmental Concern (AECs), the policies and recommended actions and the future land use map contained in Appendix D help guide decisions on future ordinances and zoning decisions. Moreover, G.S. 160A-382, G.S. 160A-383, G.S. 160A-341, and G.S. 160A-342 require statements of consistency with comprehensive plans or any other locally adopted plan(s) before adopting or rejecting any local code, ordinance, or zoning changes or amendments. Amendments to this plan will be initiated and approved by the Board of Commissioners and will require CRC's approval in accordance with the guidelines for land use plan amendments.

In addition to guiding development decisions, the Board of Commissioners will use the CAMA Land Use Plan's policies and recommended actions when making decisions on the Town's capital improvement program (CIP) and its annual operating budgets. The Board of Commissioners will also review the implementation strategy and make periodic adjustments based on budgetary considerations, emerging issues, problems or community needs, or to coordinate with future planning efforts and ongoing projects. All changes to the CAMA Land Use Plan's policies and recommended actions and this implementation strategy will be

forwarded to the DENR's Division of Coastal Management (DCM) for its subsequent approval.

Other Town boards and committees will also use the CAMA Land Use Plan. The Town's Planning and Zoning Board will use the plan and its policies to determine the consistency of project plans and development proposals with community goals and objectives. Its policies and recommendations will also guide decisions on whether to grant or deny requests for such things as ordinance amendments, conditional use permits, variance requests, or the approval of project plans. Other standing committees such as the Shoreline Protection, Sewer, Emergency Preparedness, and Public Area Improvement committees will also find policies and recommended actions that will guide future decision making.

The Town's administrative staff will also use the plan's policies and recommendations in a variety of ways. Staff in the Planning and Inspections Department will use the policies and recommendations when reviewing site plans and development proposals. Various Town departments will use the policies and recommended actions to guide proposals for development projects and plans for public services and facilities. Many of the plan's policies and recommended actions also guide ongoing operations and programs within other Town departments as well, particularly the Public Utilities Department and its efforts to manage the town's infrastructure and address problems associated with stormwater runoff. Accordingly, Town staff will use the implementation strategy to guide budget preparation, the development of the CIP, and make reference to the plan when applying for various sources of federal, state, and county grant funds.

The Town's CAMA Land Use Plan will also be used by other federal and state officials, in particular DENR's DCM. An important use of Holden Beach's CAMA Land Use Plan is for consistency determinations by the DCM for major permits issued pursuant to CAMA regulations. Other state and federal agencies will also use the plan to determine the consistency of their projects and programs with the policies contained in this plan.

The CAMA Land Use Plan will also be of use to a variety of community members. The plan is a useful tool for developers and property owners because it provides guidance on the types of land use and development that are desired within the community. The plan's policies and recommendations will also help developers to craft proposals that are consistent with the Town's goals and objectives, thereby increasing the likelihood that these projects will be approved. The plan also provides information that will help owners and developers to better understand the capabilities and limitations of their property. The plan also provides community members with information to reference when supporting or opposing projects within the community.

Section 2

Community Aspirations & Concerns

2.0 Introduction

This section of the land use plan identifies the community's aspiration and concerns. This process took place in a series of steps. First, a series of existing and emerging conditions were identified by examining a wide range of data sources including:

- *Land Use Plan 1997 Update;*
- Discussions with Town staff;
- Input from the public; and,
- Analysis of data contained in subsequent sections of this report.

The product of this analysis was the identification of a series of existing and emerging conditions warranting further investigation during Phase II of the planning process. These conditions can be categorized into five broad categories:

- Population Housing and Economy
- Water Quality and Environmental Conditions
- Infrastructure Carrying Capacity
- Public Access
- Hazard Mitigation

Each of the conditions described in Table 2.1 has the potential to influence future land use and development decisions and could impact other environmental and quality of life concerns.

Next, a public workshop was held June 22, 2006. After a short presentation, the public was asked to identify issues and concerns for the steering committee to consider during the planning process. When participants entered the workshop, they were also given an index card and asked to identify problems. This ensured that we had a record of their concerns even if they were afraid or unwilling to speak up in a public forum. Attendees were then given an opportunity to rank their priority problems. The results of the public workshop were then combined with comments received by phone and by email from residents who were unable to attend the public workshop. This produced a master list of issues that became the basis for discussion at subsequent land use plan steering committee meetings.

Table 2.1 Existing and Emerging Conditions

<p>Population, Housing, & Economy</p>	<ul style="list-style-type: none"> ▪ Permanent population is relatively steady ▪ Impacts on the community as development continues ▪ A possible decline in the number of rental properties ▪ Development of marginal lands impacts the environment ▪ Island is beginning to get built out ▪ Increasing property values ▪ Building to maximum size allowed under zoning ▪ Need to maintain height and density controls as land values continue to increase ▪ No heavy industry and limited commercial activity on the Island ▪ Small tourist oriented businesses are seen as appropriate but it is unclear whether additional commercial development should be encouraged
<p>Water Quality & Environmental Conditions</p>	<ul style="list-style-type: none"> ▪ Preserve dunes in order to protect from storm damage ▪ Protect remaining habitat and open space where possible ▪ Need to maintain/improve water quality of beaches and ICWW ▪ Problems with storm drainage in some neighborhoods ▪ Need to address nonpoint pollution from impervious surfaces ▪ Impacts of recreational users on creeks and sensitive aquatic and riparian habitat ▪ Protect greenspace where possible
<p>Infrastructure Carrying Capacity</p>	<ul style="list-style-type: none"> ▪ Heavy traffic congestion in summer months ▪ Improved traffic safety during summer months ▪ Not enough parking spaces at some access points ▪ Need to encourage more pedestrian and bike traffic. ▪ Impacts on traffic due to future development on the mainland
<p>Public Access</p>	<ul style="list-style-type: none"> ▪ Need to maintain visual access to water. ▪ Public access is not equal along the island ▪ Need more facilities like restrooms, bike racks, and showers ▪ Need more access sites on the ICWW ▪ Congested waters and possible user conflicts in ICWW (e.g., boaters, kayakers, jet skis, wake boards, etc.) ▪ Better management of parking and possibly more parking needed near boat ramp ▪ Improvements to existing boat ramp and possibly a new ramp ▪ Need for some additional recreational facilities to serve residents and visitors alike ▪ Preserving access to the beach and parking for property owners
<p>Hazard Mitigation</p>	<ul style="list-style-type: none"> ▪ Beach erosion ▪ Need to have regular beach nourishment and funding to support it

Table 2.2: Planning Issues and Concerns

<p>Land Development</p>	<ul style="list-style-type: none"> ▪ Maintain housing density and lot sizes ▪ Restrict high-rise and multi-family development ▪ Keep existing height requirements ▪ Determine the appropriate balance between residential and commercial development ▪ Determine how to respond to large-scale development proposals on the mainland side of the ICWW
<p>Infrastructure Carrying Capacity</p>	<ul style="list-style-type: none"> ▪ Improving traffic flow onto the Island ▪ Examining the impact that future growth may have on traffic ▪ Address the flooding problems on Ocean Blvd. ▪ Explore the feasibility of installing a traffic light at the base of the bridge to improve traffic flow in the summer months ▪ Using bike paths or other steps to encourage more pedestrian traffic
<p>Public Access</p>	<ul style="list-style-type: none"> ▪ Identify possible ways to expand facilities (bathrooms, showers, etc.) and services for beachgoers at some access sites or other locations ▪ Determine if additional access sites are warranted ▪ Determine if additional parking is needed for beachgoers ▪ Improving boat ramp or additional launching facilities for boaters ▪ Improving parking associated with the boat ramp ▪ Improving public access along the ICWW and identifying possible enhancements such as a fishing or crabbing pier ▪ Address the issue of building clubhouses and shuttle services for off island beachgoers ▪ Possible uses of the 40-acre site owned by the town on the ICWW
<p>Natural Hazards</p>	<ul style="list-style-type: none"> ▪ Protecting and preserving current building setbacks and restrictions to prevent further encroachment in hazard areas ▪ Continuing to protect dunes and preserve their ability to minimize potential storm damage ▪ Nourishing the beach on a regular basis to minimize impacts that beach erosion has on property owners ▪ Ensure that the town takes the proper steps to be prepared in the event of a major storm
<p>Water Quality & Natural Resources</p>	<ul style="list-style-type: none"> ▪ Protecting and preserving water quality by addressing NPS pollution ▪ Protecting and preserving natural habitat and conservation areas when possible ▪ Improving storm drainage where possible

Over the next few months, the list of issues was refined based on discussion and analysis of the information contained in the Phase I report, as well as ongoing public input. The product of these discussions is the list of planning issues and concerns to be addressed in the land use plan update contained in Table 2.2.

During Phase II of the planning process, the steering committee turned its attention to developing the policies and recommended actions contained in Section 9. During the planning process, the policies and actions recommended in the *1997 CAMA Land Use Plan Update* were used as the starting point for discussion. They were then modified based on the results of the analysis contained in Appendix B, the issues displayed in Tables 2.1 and 2.2, discussions at steering committee meetings, and the technical analysis embodied in the Phase I Report. The draft policies were further modified based on input at a public workshop on May 22, 2007 where the public had an opportunity to provide input on the proposed policies and recommended actions.

Section 3

Population, Housing, & Economy

3.0 Introduction

The Town of Holden Beach is widely recognized as one of the finest family oriented beach towns on the East Coast of the United States. The residential character, the quality of the natural and man-made environment, and the beautiful sandy beaches, clear water, and small town atmosphere create a high quality of life for residents and visitors alike. This section of the land use plan identifies important community characteristics and demographic trends that warrant consideration when formulating policies and recommendations included in the plan for the future. The analysis draws primarily on data drawn from the 2000 Census and U.S. Census Bureau projections, Holden Beach land use records, and other regional data sources.

In the discussion that follows, comparisons are drawn with the state of North Carolina, Brunswick County and other barrier beach communities summarized in Table 3.1 to help interpret these data.

3.1 Permanent Population Estimates

The population of a municipality with a large influx of seasonal residents requires a careful analysis of the population because there are many distinct categories of residents including:

- Property owners and non-property owners
- Residents and non-residents
- Registered voters and non-registered voters
- Business owners and non-business owners

The Division of Coastal Management (DCM) guidelines require input from all groups of potentially affected residents and members of the public. This section of the land use plan focuses on the population and demographic characteristics of the year-round population of Holden Beach. Since the Bureau of the Census and other State agencies collect these data, there is much more precision in this information than there is in the seasonal population estimates presented later in this section of the report.

Table 3.1: Comparison of Population Characteristics of Selected North Carolina Beach Communities

Local Government	Median Age	Percent Housing Units Occupied All Year	Percent in Labor Force 16 & Over	Median Household Income	Median Family Income	Per Capita Income	Percent of Total Housing in 1-Unit Detached	Median Value of Owner Occupied Housing
Southern Shores	51.4	49.2 %	51.3 %	\$61,676	\$68,250	\$35,933	97.4 %	\$221,500
Kitty Hawk	40.6	48.3 %	69.9 %	\$42,813	\$48,676	\$22,960	67.8 %	\$144,600
Kill Devil Hills	36.7	48.8 %	76.6 %	\$39,713	\$44,681	\$20,679	82.9 %	\$104,500
Nags Head	42.7	27.4 %	67.0 %	\$53,095	\$61,302	\$30,157	83.3 %	\$143,900
Atlantic Beach	48.7	20.5 %	63.3 %	\$38,313	\$52,411	\$31,339	30.8 %	\$207,800
Pine Knoll Shores	61.8	37.9 %	36.8 %	\$53,800	\$60,662	\$34,618	47.7 %	\$220,500

Caswell Beach	59.9	32.7 %	39.9 %	\$57,083	\$63,750	\$41,731	43.7 %	\$242,300
Oak Island	49.2	46.2 %	56.1 %	\$40,496	\$48,775	\$23,964	83.5 %	\$119,400
Holden Beach	55.4	18.4 %	48.8 %	\$59,583	\$70,000	\$35,114	84.7 %	\$247,300
Ocean Isle Beach	53.4	8.3 %	49.6 %	\$67,639	\$65,625	\$42,605	69.3 %	\$340,700
Sunset Beach	60.2	30.5 %	37.8 %	\$47,356	\$57,019	\$36,181	51.8 %	\$219,600
Brunswick County	42.2	59.2 %	57.7 %	\$35,888	\$42,037	\$19,857	55.7 %	\$127,400
North Carolina	35.3	88.9 %	65.7 %	\$39,184	\$46,335	\$20,307	64.4 %	\$108,300
NC Beach Municipal Average	50.3	31.44 %	56.75 %	\$50,357	\$57,108	\$32,026	59.48 %	\$249,145
Holden Beach Rank	7th highest	4th lowest	4th lowest	4th highest	2nd highest	8th highest	3rd highest	6th highest

Source : US Census Bureau - 2000 Census of Population and Housing

The Population Division of the U. S. Census Bureau estimates the 2007 year-round population of Holden Beach to be **850** persons [Table 3.2]. According to the Bureau of the Census, the 2000 population was 787 persons while in 1990 it was 642 persons. This suggests that the ten-year growth rate from 1990 to 2000 was 25.7 percent. Conversely, between 2000 and 2007 the population grew by about **8** percent. This equates to an annualized growth rate of **just under three** percent. It is unclear if this represents an actual

Table 3.2: Population

Year	Holden Beach	Percent of County Pop.	Brunswick County
1980	241	0.67%	35,777
1990	642	1.26%	50,985
2000	787	1.08%	73,143
2007*	850	0.86%	99,214

Figure 3.1: Population Growth in Holden Beach and Brunswick County (1980 – 2007)

growth in population over the last seven years or whether it is the product of the procedures the U.S. Census uses to estimate population change for small communities in the years between census periods where no sampling is done. Instead, population estimates are based on assumptions drawn from historic trends and sampling data from Brunswick County. These estimates are further complicated by the fact that there are high percentages of seasonal residents.

3.1.A Year Round Population Trends

Figure 3.1 examines population growth in Holden Beach and Brunswick County from 1980 to 2007 (note that the population data are plotted on separate axes). It is readily apparent that while Brunswick County's population continues to increase steadily, Holden Beach's greatest period of growth was from 1980 to 1990; the population has increased at a slower rate since this time.

Table 3.3 shows that from 1980 to 1990, Holden Beach's growth rate was faster than Brunswick County. Between 1990 and 2000, Holden Beach had a 22.6 percent increase in population, while Brunswick County increased by 43.5 percent. Between 2000 and 2007, the population growth rate in Holden Beach was estimated at about 8 percent, while Brunswick County's was estimated to have increased by about 35.6 percent.

It is clear that Brunswick County is in the early stages of a period of steady population growth as areas near downtown Wilmington, Shallotte, and North Myrtle Beach continue to grow. Retirement, seasonal population, a growing regional economy, and proposals for large public projects including the outer loop, the new bridge across the Cape Fear River, the extension of Interstate 20, a new international port, and the upgrade of the 74/76 corridor to an interstate, will have a profound impact on population growth and development in Brunswick County. While most of the population growth will not occur in barrier beach communities due to limits on developable land and existing limits on density, the population growth will have impacts on the island, many of which are discussed in subsequent chapters of this report.

Given the rapid population growth in Brunswick County, the scope of proposed large-scale infrastructure projects, and the uncertain impacts of a retiring baby boom population, it is difficult to predict the future population of Holden Beach. For example, there is a great potential to increase the year-round population in Holden Beach because it currently has the fourth lowest year round occupancy rate of North Carolina municipal beaches. It is possible that this occupancy rate could change as population increases in Shallotte and Bolivia and more residents choose to live in Holden Beach and commute to jobs elsewhere. Similarly, as the baby boomer population reaches retirement, the portion of the population that owns seasonal housing on Holden Beach may choose to retire on the Island, or baby boomers may purchase property on the Island and retire there. This could increase the year-round population of Holden Beach. Any annexation of land on the inland side of the ICWW would also change the population demographics in the community.

Conversely, the continued increase in home prices on the Island is likely to cause other demographic changes. As home values in Holden Beach increase, there may be an incentive for some year-round residents to sell their properties for a profit. It may also become harder for year-round residents to afford to live in Holden Beach if the home values go up faster than in other areas of Brunswick County. Those residents on fixed-incomes will be particularly affected as taxes increase during re-evaluations. The future tax rate in Brunswick County may also increase to pay for services requested by new citizens elsewhere

Table 3.3: Percent Population Growth (1980 – 2007)

in the County. Thus, some existing year-round residents may sell their homes to seasonal residents. It could also lead to the conversion of rental properties to seasonal homes. Accordingly, it is difficult to predict future year round population with much certainty since it will depend more on the percentage of year round residents than it will on new construction.

3.1.B Permanent Population Projections

When preparing a land use plan, it is useful to include a projection of future population so that local decision makers can plan for growth. Typically, population projections for beach communities are presented as an extrapolation from the overall countywide growth trends and historic patterns over the past several decades. However, it is unlikely that Holden Beach’s population will grow anywhere near as fast as the population in Brunswick County. Moreover, it is not even clear that the permanent population has actually grown at all since the 2007 population estimate is not based on any sampling data and the estimated increase is only 63 people or about 30 households.

Further complicating any population forecast is the fact that Holden Beach is currently the North Carolina barrier beach community with the fourth lowest percentage of housing units that are occupied year-round (18.4 percent) [Table 3.1]. The percentage of housing units that are occupied year-round could increase due to a range of factors that are difficult to predict such as population and housing trends in neighboring communities, changes in property

Figure 3.3: Projections of Future Permanent Population Increases

values (positive or negative), and the growing retirement of the baby boom population. Any of these situations could increase the year round population (i.e., the percentage of occupied housing units) positively or negatively in significant ways. For example, if the percentage of housing units occupied year-round in Holden Beach increased from the fourth lowest percentage (18.4 percent) to the average for North Carolina municipal beaches (31.44%) then based on current average household size (2.08 people), this would translate into a year round population of about 1,341, an increase of 554 people (70.4 percent increase from 2000).

While it is unclear what a reasonable estimate of future population growth should be, Figure 3.3 illustrates three different scenarios for future population growth. The first assumes an annualized growth rate of just one percent. This is slightly less than the U.S. Bureau of Census estimate of about 1.69 percent annualized growth between 2000 and 2007. This would yield a population in 2025 of 1,009 (increase of 222 people or 28 percent increase between 2000 and 2025). At the current household size of 2.08, this would require approximately 107 additional households or just 11.8 percent of the 910 undeveloped parcels (assuming just one housing unit per parcel even though many parcels can build multiple units under current zoning requirements) or 6.4 percent of the 1,683 vacant housing units in 2000. The middle estimate assumes a 3 percent annualized population growth rate, slightly less than two times the U.S. Bureau of Census estimate for the 2000 to 2007 period (1.69 percent). This would produce a population in 2025 of 1,648 people (109 percent increase). At the current household size this would require 414 households or 45.5 percent of the undeveloped parcels or just 24.6 percent of the vacant housing units. The final project assumes an unrealistic annualized growth rate of 5 percent. This would produce a 2025 population of 1,878 people (239 percent increase). The 903 new households would occupy nearly 99 percent of the vacant parcels but only 53.7 percent of the vacant housing stock.

Given these estimates and existing height and density restrictions, there is every reason to believe that Holden Beach can accommodate this development because even under the unrealistic 5 percent annualized population growth estimate, all of the population can easily be accommodated by the current vacant housing stock that is used for seasonal rentals. Accordingly, there is adequate infrastructure (waters, sewer, roads, etc.) to support projected population increases under any of the three scenarios.

3.2 Key Population Demographics

In order to better understand the population of Holden Beach, it is useful to examine several of the key population, economic, and housing demographics and compare these with Brunswick County and other NC barrier beach communities [Table 3.1].

3.2.A Age of the Population

The *median age* of residents of the Town of Holden Beach is 55.4 years. This is comparable to the average among NC beach communities, which is 50.3 years. Of the 20 barrier beach communities, Holden Beach has the seventh highest median age. The barrier beach municipality with the highest median age is Pine Knoll Shores (61.8) and the lowest is Kill Devil Hills (36.7).

In both 1990 and 2000, on a percentage basis, Holden Beach had fewer school age children than Brunswick County [Table 3.5]. This may be due to the high cost of housing on Holden Beach and the economics of young families. In both 1990 and 2000, there were lower percentages of young adults aged 18 to 24 in Holden Beach than in Brunswick County. In 1990, the age group ranging from 25-54 was similar in Holden Beach and Brunswick County on a percentage basis. In 2000, Holden Beach saw a slight decrease in this age group, and had a slightly lower percentage than Brunswick County. In 1990 and 2000, the percentage of people aged 55 and over in Holden Beach was slightly higher than Brunswick County [Table 3.5]. However, while Holden Beach has a median age similar to that of other barrier beach communities, it appears to be experiencing a slight aging of its overall population. This trend is to be expected given the aging baby boomer population, and that Holden Beach attracts wealthy retirees.

3.2.B Racial Composition

Table 3.6 demonstrates that less than one percent of Holden Beach's population is black, and less than one percent is non-white. This stands in contrast to Brunswick County where 14.4 percent of the population is black, and 3.3 percent of the population is non-white. Comparing the 1990 and 2000 racial compositions, Holden Beach has become slightly more diverse, but still lags far behind Brunswick County [Table 3.6].

Table 3.5: Persons by Age (1990 – 2000)

Age Group	Holden Beach 1990	Percent Total	Holden Beach 2000	Percent Total	Brunswick County 1990	Percent Total	Brunswick County 2000	Percent Total

3.2.C Educational Attainment

Residents of Holden Beach are generally better educated than residents in Brunswick County [Table 3.7]. Approximately 96.4 percent of all adults in Holden Beach are high school graduates compared to 78.3 percent in Brunswick County. Forty-six percent of residents have a bachelor's degree or additional advanced degrees compared to only 16.1 percent of County residents.

3.2.D Housing Stock

Tables 3.8 and 3.9 and Figures 3.3 and 3.4 examine the changes in the housing stock for Holden Beach and Brunswick County between 1990 and 2000. Due to formatting in Census data, some small areas of mainland Brunswick County are included in the figures for Holden Beach. This explains the presence of mobile homes in these statistics even though there are no mobile homes within the Town's corporate limits. Compared to Brunswick County (6.94 percent), a larger percentage of the housing stock on Holden Beach is multi-family development (10.72 percent); Holden Beach also has a larger percentage of single-family homes (89.28 percent) than Brunswick County (56.95 percent) when looking at the 2000 U.S. Census data. Brunswick County has a much larger percentage of mobile homes (35.89 percent) as compared to Holden Beach (0 percent) [Table 3.9].

The number of single-family homes in Brunswick County increased by 44.93 percent from 1990 to 2000; a slightly smaller increase was observed in Holden Beach, as a 37.14 percent increase in single-family homes was recorded during the same time period [Table 3.8]. These similar growth patterns are likely to diverge as the amount of vacant land suitable for development in Holden Beach decreases. There are approximately 910 undeveloped lots suitable for development left in Holden Beach.

Within Holden Beach, the majority of the total housing units are classified as *single-family unit/detached housing* (84.73 percent). This is the third highest percentage of any NC barrier beach community. The NC barrier beach with the highest percentage of single family/detached homes is Southern Shores (97.4 percent). The lowest percentage of single-family homes is in Indian Beach (2.7 percent) and the second lowest is North Topsail Beach (25.7 percent). In Brunswick County, 55.7 percent of housing is in single family/detached units while in North Carolina it is 64.4 percent.

Multi-family structures containing two to four units accounted for 10.03 percent of all housing units in Holden Beach in 2000 compared to only 3.25 percent in the County. The percentage of multi-family structures containing two to four units in Holden Beach has decreased from 15.02 to 10.03 percent from 1990 to 2000, while the percentage of multi-family structures containing two to four units in the County decreased slightly from 3.84 to 3.25 percent. The number of multi-family structures containing two to four units in Holden Beach has actually decreased by 15.98 percent from 1990 to 2000, while the number of

Source: United States Census of Population and Housing 2000

Figure 3.6: Age of Structures in Holden Beach by Percentage

multi-family structures containing two to four units in the County increased by 15.94 percent over the same period of time.

Structures containing five or more housing units accounted for only 0.18 percent of housing in Holden Beach in 1990. The percentage increased slightly to 0.69 percent in 2000. Comparatively, the same type of units increased slightly during this period in Brunswick County from 3.33 to 3.69 percent. The number of multi-family structures containing five or more housing units has increased from only three structures in 1990 to 14 structures in 2000.

3.2.D.1 Age of Structures: The last inventory of housing age in Holden Beach was completed during the 2000 U.S. Census. Twenty-nine percent of housing in Holden Beach has been built since 1990. Only 31.9 percent of the housing in Holden Beach was built before 1980. The trend to notice here is that development within the municipal boundaries for Holden Beach is relatively new. Future development is expected to be both redevelopment and new development, until the vacant, buildable lots are depleted.

3.2.D.2 Occupancy: In Holden Beach, only 18.4 percent of the total housing units were occupied year round. An occupied unit is defined as a unit where a person or group of persons is living at the time the Census is conducted. The occupants must have no other normal place of residence for the unit to be counted as occupied. Similarly, if the occupants are only temporarily absent (i.e., on vacation) the unit is counted as occupied. Holden Beach has the fourth lowest occupancy rate among NC barrier beach communities. The highest percentage is Carolina Beach (56.2 percent) while the lowest is Indian Beach (4.1 percent). This statistic characterizes Holden Beach as a seasonal community, with population spiking during summer months and approximately 81.6 percent of the housing standing empty during the winter months. By way of contrast, in North Carolina the percentage of housing units occupied year round is 88.9 percent. In Brunswick County, the figure is 59.2 percent.

In Holden Beach, owner occupied housing accounts for 15.5 percent of all units in 1990 and 16.1 percent in 2000 [Table 3.11]. As shown in Table 3.12, the number of occupied units in Holden Beach increased by 24.67 percent from 1990 to 2000 while it increased by 51.67 percent in the County. From 1990 to 2000, the number of owner occupied units also increased (31.87 percent) while during the same period the County's owner occupied units increased by 52.91 percent. Renters occupied 3.3 percent of all housing at Holden Beach in 1990 and 2.3 percent in 2000. During this same period, renter occupied housing decreased by 9.43 percent at Holden Beach, while in the County renter occupied housing increased by 46.19 percent. The increased housing values and the growth of seasonal, recreational, and occasional housing units, and vacant housing units, helps explain the low occupancy rate. The trends in the Holden Beach housing occupancy between 1990 and 2000 are generally reflective of the population trends during this same time period.

Table 3.11: Percent of Owner vs. Renter Occupied Housing (1990 – 2000)

*Seasonal: held for occupation during summer

*Occasional Use: Unoccupied but not for rent or for sale

3.2.D.3 Vacant and Seasonal Housing: Given the large influx of seasonal residents, it is useful to understand the vacant and seasonal housing available on Holden Beach. As indicated in Table 3.13, 81.3 percent of all housing at Holden Beach was vacant in 1990. Of this, 54.6 percent was for seasonal, recreational or occasional use, which is defined as vacant but not for rent or sale. In 2000, the percentage of vacant housing increased to 81.6 percent with 52.9 percent used for seasonal, recreational or occasional purposes. This translates into a 23 percent increase in the housing used for seasonal, recreational or occasional purposes during the 1990 to 2000 time frame. During the same period, there was a 26.97 percent increase in total housing units [Table 3.14]. The percentage of vacant housing units increased by 27.5 percent from 1990 to 2000; from 1,320 units to 1,683 units.

The vacancy rates are obviously much higher in Holden Beach than in Brunswick County, due to the large number of seasonal properties and the influx of seasonal residents, many of whom rent properties for some period of time. For example, Brunswick County as a whole had a relatively low vacancy rate during this time period. In 1990, 45.9 percent of all units were vacant, with 34.6 percent being used for recreational purposes. In 2000, 40.8 percent of all housing was vacant in Brunswick County, with 30.2 percent being used for recreational purposes [Table 3.13]. However, the vacancy rate for non-seasonal housing in Holden Beach is much higher than in the county as a whole and has increased at a slightly higher rate than the county vacancy rate; 27.5 percent and 23.16 percent, respectively.

3.2.D.4 Development and Redevelopment Activity: Unfortunately, the most recent U.S. Census data on housing is the 2000 Census. Thus, it is hard to know what the current trends are in terms of the changes in the number of housing units. The only source of data is the Town’s records of building permits. While some people receiving permits will end up not building the permitted activity, they provide some indication of the current pace of development. Table 3.15 reports on the building permits issued from 2000 until the end of

Table 3.14: Percent Change in Vacant and Seasonal Housing (1990 – 2000)

Housing Units	Holden Beach 1990	Holden Beach 2000	Percent Change	Brunswick County 1990	Brunswick County 2000	Percent Change

Figure 3.8: Percent Change in Vacant and Seasonal Housing (1990 – 2000)

2005. There were 272 newly erected structures in Holden Beach during this time period. Table 3.16 looks at all buildings that were remodeled or repaired between 2000 and 2005. Between 2000 and 2005, approximately 95 percent of the new construction [Table 3.15] within Holden Beach was single-family residential type.

3.3 Housing Value

One measure of a community's vitality is the value of its housing stock. Since Holden Beach is a barrier beach community, it is not surprising to find that the value of owner occupied units is generally much higher at Holden Beach than in the County. Sixty-seven percent of owner occupied housing at Holden Beach is valued at \$200,000 or greater. In comparison, only 21.8 percent of housing is valued above \$200,000 in Brunswick County. Not surprisingly, the cost of rent is also much higher at Holden Beach than in the County. In Holden Beach, 91.1 percent of rent is above \$500 while in Brunswick County only 57.9 percent of rent is above \$500, among those who pay rent.

The *median value of owner occupied housing* in the Town of Holden Beach is \$247,300. This is the sixth highest value amongst NC barrier beach communities. The NC Barrier Island Beach municipal average is \$249,145. By way of contrast, Brunswick County's median value of owner occupied housing is \$127,400 while in North Carolina it is \$108,300. The highest median value for owner occupied housing is at Indian Beach (\$625,000); the lowest median value of owner occupied housing is in Kill Devil Hills (\$104,500).

The value of property in NC barrier beach communities has increased significantly since the 2000 Census. In an effort to obtain a more realistic value for owner occupied housing in NC barrier beach communities, contact was made with the various Boards of Realtors along the NC coast. Not all Boards would supply the requested information on 2005 home sales prices; however, among those that did, an average increase of 160 percent was seen between the median value of owner occupied housing in 2000, and the 2005 average home sales price. The 2005 average home sales prices were obtained from the Brunswick County Board of Realtors; the Carteret County Association of Realtors provided similar data for Carteret County beaches. For Holden Beach, the median value of owner occupied housing in 2000 was \$247,300; the 2005 average home sales price for Holden Beach was \$683,352; this is an increase of 176 percent. For Brunswick County, the median value of owner occupied housing in 2000 was \$127,400; the 2005 average home sales price for Brunswick County was \$304,659; this is an increase of 139 percent.

3.4 Income

Given the value of its housing stock, it should not be surprising to find that Holden Beach is an affluent community with approximately 59.6 percent of the population making more than \$50,000 per year. The U.S. Bureau of the Census gathered the latest information on the income in Holden Beach in 2000, but the income information was gathered from the previous year. Consequently, the latest information available is for the calendar year 1999 [Table 3.19 & 3.20.]

Figure 3.9: Percentage of Owner Occupied Housing at Specified Values (2000)

Table 3.18: Contract Rent for Specified Renter Occupied Housing Units (2000)

Contract/Rent	Holden Beach 2000	Percent Total	Brunswick County 2000	Percent Total
Gross Rent				
Less than \$200	0	0.0 %	131	2.4 %
\$200-\$299	0	0.0 %	195	3.6 %

\$1,500 or more	7	14.9 %	59	1.1 %
No Cash Rent	2	4.3 %	763	14.2 %
Total	47	100.0 %	5,391	100.0 %

Source: United States Census of Population and Housing 2000

Figure 3.10: Percentage of Renters Paying Specified Rent Values (2000)

The *median household income* in Holden Beach is \$59,583 making it the fourth highest amongst NC barrier beach communities. This is substantially higher than Brunswick County (\$35,888). The highest median household income among NC barrier beach communities is in Ocean Isle Beach (\$67,639) and the lowest is found in Carolina Beach (\$37,662). The *median family income* in Holden Beach is \$70,000, making it the second highest of all NC barrier beach communities and is substantially higher than Brunswick County (\$42,037) and North Carolina (\$46,335). The highest median family income is in Wrightsville Beach (\$71,641). By way of contrast, the lowest median family income is in Kill Devil Hills (\$44,681).

The *per capita income* in Holden Beach is \$35,144, making it the eighth highest among NC barrier beach communities. This is substantially higher than Brunswick County (\$19,875) and North Carolina (\$20,307). The highest per capita income among NC barrier beach communities is at Bald Head Island (\$45,585) while the lowest is Kill Devil Hills (\$20,679).

The important conclusion to draw from these data is that regardless of how you measure income in Holden Beach, the trends over the last decade are towards a growth in income with median household income rising by 35.42 percent, median family income increasing by 44.16 percent, and per capita rising 46.31 percent.

3.4.A Low and Fixed Income Populations

Given the high rent and home values, it should not be surprising to learn that there is very little of what the U.S. government refers to as “poverty” in Holden Beach. However, because the Census includes areas within the Holden Beach mainland, there are 12 families and 36 individuals or 4.4 percent and 4.6 percent of the population defined as living in poverty, respectively. The average amount of public assistance income for this population was \$4,240. By way of contrast, in Holden Beach there are 90 households earning in excess of \$100,000, approximately 25.3 percent of all households. Moreover, the percentage of persons living in poverty in Holden Beach (4.4 percent) is lower than the percentages found in the State (9.0 percent) or Brunswick County (9.5 percent).

The number of households in Holden Beach reporting Social Security income is 171 with a mean social security income per household of \$14,282. The number of Holden Beach households reporting retirement income was 147 with a mean retirement income of \$27,798. By way of contrast, North Carolina’s mean retirement income was \$16,831. Thus, there is a significant population of retired individuals in Holden Beach, many of which may be on fixed incomes. However, these retirees are more affluent than those found elsewhere in the County or the State.

3.5 Local Economy

A vibrant economy is essential to assure a community’s continued prosperity. Holden Beach is a seasonal community with only 18.4 percent of housing occupied year round. During the summer months, the Holden Beach population more than doubles as tourists and vacationers as well as summer residents flood the island. Accordingly, Holden Beach is dominated by a service-based economy. No traditional industry is found on the island. Many of the year-round residents work in the Brunswick County area. Approximately 87.8 percent of all persons employed who live in Holden Beach drive to work alone while 2.6 percent car pool. Many of the service jobs related to tourism on Holden Beach are occupied by non-Holden Beach residents seeking temporary employment during summer months or by local students from area high schools and colleges.

3.5.A Employment

The *percentage of persons in the labor force* (16 and over) at Holden Beach is 48.8 percent making Holden Beach the fourth lowest among NC barrier beaches [Table 3.22]. This is likely due to the slightly higher median age in Holden Beach. This is also lower than the percentage of persons in Brunswick County in the workforce (57.7 percent), and lower than the percentage of the total North Carolina population in the work force (65.7 percent). Examining Table 3.23 and Figure 3.10, it appears that slightly more Holden Beach residents work in the sectors sales and office than is found in Brunswick County; approximately 53.2 percent of Holden Beach residents are employed in management, professional and related

Table 3.22: Employment Status (2000)

Construction, Extraction, and Maintenance	22	7.0 %	19.0 %
Production, Transportation, and Material Moving	10	3.2 %	13.5 %

Source: United States Census of Population and Housing 2000

occupations, compared to only 23.5 percent of Brunswick County. This is consistent with the observation that a significant percentage of the Holden Beach population has an income above \$100,000 per year, which is also likely due to its well educated population.

Table 3.24 and Figure 3.11 summarize employment patterns of permanent residents in Holden Beach age 16 and over. Employment patterns are similar to those found in Brunswick County; however, a few differences deserve attention. Construction employs only 10.2 percent of Holden Beach residents, but 16.6 percent of Brunswick County residents. Manufacturing employs only 2.2 percent of Holden Beach residents, but 8.2 percent of Brunswick County residents. Transportation, warehousing, and utilities, employs only 1.9 percent of Holden Beach residents, but 6.3 percent of Brunswick County residents. Finance and real estate employs 18.8 percent of Holden Beach residents, and only 6.0 percent of Brunswick County residents. Professional scientific, management, administrative, and waste management services employs 14.3 percent of Holden Beach residents, and only 7.6 percent of Brunswick County residents. The larger number of residents employed in finance, real estate and professional industries in Holden Beach also reflect the more educated population and higher median income. The class of worker statistics for Holden Beach and Brunswick County are very similar for 2000 [Table 3.25].

Table 3.24: Employed Persons 16 and Over (2000)

Industry	Holden Beach 2000	Percent Total	Brunswick County 2000	Percent Total

3.5.B Unemployment

Unemployment tends to be a lagging indicator in that it follows the business cycle. Overall, unemployment rates for Brunswick County generally declined between December 2004 and May 2005, and have held relatively steady since that time. The Brunswick County unemployment rates are generally lower than those in Columbus County, and the State. Unemployment rates in Pender County are similar to Brunswick County; unemployment rates in New Hanover County are generally lower than those in Brunswick County.

Table 3.26: Unemployment Rates

Area Unemployment Rates - 2005	December 2005	September 2005	May 2005	December 2004
Brunswick County	4.4%	4.4%	4.4%	5.5%
New Hanover County	3.5%	3.8%	3.9%	4.1%
Columbus County	6.1%	6.6%	5.9%	6.5%

2003	\$272.58
2004	\$313.65

Source: North Carolina Department of Commerce

3.5.C Retail Sales

Another measure of a community's economic vitality is its retail sales. According to the North Carolina Department of Revenue, the gross retail sales in Brunswick County rose by 12.03 percent between 2003 - 2004 and 2004 - 2005 (most recent data available). They rose from \$1.02 billion to \$1.14 billion. Statewide, sales rose 9.6 percent to \$153.6 billion.

Figure 3.13: Tourism Revenues in Brunswick County

3.5.D Summary of Community Economic Activity

Holden Beach's economy generally reflects the trends that occur in Brunswick County and the larger four-county region (Brunswick, New Hanover, Columbus, and Pender). Therefore, it is expected that as the regional economy improves or declines, so will Holden Beach's. Holden Beach is also heavily dependent on the tourism industry. In general, if this industry is doing well, the Town's economy is doing well. Thus, the local economy is affected by larger Statewide and national fluctuations in the economy that influence tourism. As noted in Table 3.27 and on Figure 3.11, the county tourism has been steadily increasing since 1990; the same trend appears to hold on the Island. As described in Section IV, the local economy can also be influenced by events outside of human control (weather, hurricanes, etc.).

3.6 Future Population Estimates

Given the large influx of summer tourists and the corresponding impacts on the Town's infrastructure, services, and natural resources, it is important to have good estimates of the seasonal population. The following distinctions are useful to consider:

- **Permanent population:** year-round residents who declare Holden Beach as their primary residence on their census form and other government documents. This includes people who both own and rent residential property on a year round basis.
- **Seasonal population:** people who are temporary residents of Holden Beach who either rent or own property but declare another location as their primary residence. This includes people who own or rent property and reside at Holden Beach for the summer season or perhaps visit only on weekends. It also includes

the additional population occupying housing units rented on a weekly or monthly basis. Given the transitory nature of this population, it is likely to vary over the course of the summer and during any given week with lower numbers on weekdays and higher numbers on weekend days.

Related to seasonal population is the *peak seasonal population*. This figure is the largest and is the combination of the permanent and seasonal residents plus the additional visitors, guests, and tourists that visit the Island during a peak summer *weekend day* rather than a typical weekday.

While it is important for planning purposes to know these numbers, they are difficult to estimate with any precision, and require making assumptions based upon experience and an understanding of the underlying population demographics, seasonal tourism industry, and the habits of beach goers. In making these estimates, it is also important to use a variety of techniques whenever possible to help evaluate the reasonableness of the assumptions used by any one technique.

One of the most frequently used techniques is to simply base the estimate on the number of housing units by determining what a typical occupancy rate might be and how many people per housing unit occupy a unit on average. According to the 2000 Census and the number of building permits issued for residential construction between 2000 and 2005, as determined by the Holden Beach Department of Planning and Parks, there were approximately 2,323 (2,062 + 261) housing units in Holden Beach in 2005. If we assume the same occupancy rate for 2005 as the U.S. Bureau of Census found in 2000 (18.4 percent), there are 428 housing units occupied by permanent residents in 2005. This equates to an average of two persons per unit. Using the same methodology, there were 1,230 (1,091+139) seasonal and recreational housing units, and vacant housing accounted for an additional 667 (592+75) units. For the purposes of this analysis, vacant housing is treated similar to seasonal and recreational housing in terms of the assumptions made about the number of persons per unit, however, slightly different occupancy rates are used in the calculations [Table 3.28].

Table 3.28 summarizes the seasonal population projections and it includes both a high and a low estimate. The high estimates use many of the standard estimates of the number of persons per unit used by other barrier beach communities, however, only a 95 percent occupancy rate was used in calculating seasonal and vacant housing [See Table 3.28]. Since the assumptions made in other barrier beach communities may be unrealistic given the higher rental costs and home values in Holden Beach, a low estimate was also calculated using more conservative estimates of the average number of people per unit and occupancy rates.

The high and low estimates make several assumptions. First, to account for occasional visitors staying with year round residents, the high estimate assumes that there is an additional person per unit (3.00). The low estimate drops this estimate to .25 persons per unit (2.25). In both cases, a 100 percent occupancy rate is assumed. Second, the high estimate uses the standard number used for the number of occupants in a vacation cottage (6.5 persons per unit) and assumes a 95 percent occupancy rate for seasonal and vacant housing units. The low estimate drops the average number of people per unit to 4.5 per unit and assumes an

Table 3.28: High and Low Seasonal Population Estimates

Housing Units	Low ¹		High ²	
	Persons/unit	Total	Persons/unit	Total
Permanently Occupied Housing (428)	2.25	963	3.00	1,284
Seasonal or Recreational Housing (1,230)	4.5	4,705	6.5	7,596
Vacant Housing (667)	4.5	2,252	6.5	4,119
Total		7,920		12,999

¹For the low estimate, the following assumptions were used to calculate the total number of persons: .25 guests per permanent housing unit on average; 85 percent occupancy rate for seasonal recreational housing; and 75 percent occupancy rate for vacant housing. Since there are no hotel/motel rooms present on Holden Beach, these units were not used in calculating the seasonal population estimate.

²For the high estimate, the following assumptions were used to calculate the total number of persons: 1 guest per permanent housing unit on average; 95 percent occupancy rate for seasonal recreational housing; and, 95 percent occupancy for vacant housing.

85 percent occupancy rate for seasonal housing and a 75 percent occupancy rate for vacant housing. The calculations are fairly simple and involve using the following equations:

$$(\# \text{ units}) \times (\text{Occupancy rate}) \times (\# \text{ of people per unit}) = \# \text{ of people}$$

These calculations produce a high estimate of 12,999 and a low estimate of 7,920 people with a mid-range estimate of around 10,460. Thus, while the high estimates may typify a peak summer weekend (e.g., July 4th), the low estimate may better reflect an average summer weekend. In either case, these numbers reflect the population on weekends as compared to a weekday where the number of people per unit and the occupancy rates will be substantially lower.

These figures do not include people who may travel to the island during the day. This additional strain on the Town's infrastructure is difficult to estimate. However, data from the Wrightsville Beach 2003 Survey of Beachgoers provide information that allows us to make some informed assumptions about these travel behaviors if we assume that the behavior of daily beachgoers in this community is comparable to that in Holden Beach. The average carload of people traveling to the beach is unlikely to be much larger than four people and is probably closer to three people. The typical length of stay at the beach is about five hours. Since people tend to arrive at the beach after 11 AM, only a limited turnover in the parking spaces is likely to occur by beachgoers. People also travel to the Island for shopping and to frequent restaurants.

It is hard to estimate these numbers with any precision because you run the risk of double counting since some of these people have already been counted in the estimates of the seasonal population. What is known is that there are approximately 224 public parking spaces on the Island. This number does not include the additional public parking spaces on side streets, a number that is presently unknown. If we assume an average of three people

per car and that all of the spaces turn over 1.5 times, an additional 1,008 people may travel to the beach by automobile in any given weekend day in addition to those that park on side streets, in driveways of homeowners they know, and in private parking lots (e.g., those associated with businesses).

3.6.A Alternative Ways of Estimating Peak Population

It is also useful to look at other ways of estimating peak population. Given its geographic configuration with only one entry point at the Holden Beach Bridge over the Intracoastal Waterway, it might be possible to estimate changes in seasonal population by looking at changes in the traffic counts at the bridge. Unfortunately, the Department of Transportation (DOT) does not regularly take traffic counts on the Holden Beach bridge. Portable Traffic Count Stations (PTC) on primary routes are generally counted once a year by DOT. These counts are analyzed and factored using other information including seasonal adjustments to calculate Average Annual Daily Traffic (AADT). A few stations are selected periodically to count at different intervals throughout the year in order to obtain seasonal traffic.

A PTC Station is located on NC 130, just south of the intersection with SR1120; although vehicles travelling past this PTC do have opportunities to turn off NC 130, prior to crossing the bridge, the traffic patterns in the vicinity of PTC Station 900031 may be used to estimate general traffic trends on the island. Seasonal traffic counts were obtained from PTC Station 900031 for six days for a week in February 2006; for five days for a week in May 2006; and for five days for a week in July 2006. The lowest total traffic count was on a Sunday in February. This count showed 3,074 vehicle trips. The highest total traffic count was on a Saturday in July. This count showed 15,247 vehicle trips. By way of comparison, the average daily traffic or AADT on Highway 130, leading to the Holden Beach Bridge at PTC Station 900031 during 2005 was 7,400.

During the 2006 seasonal counts the highest total count observed was 15,247 vehicle trips on Saturday in July. Subtracting the total trips observed on Saturday in February (3,357), 11,890 additional car trips were observed on the Island in the summer compared to the winter. This indicates that there is 4.5 times more traffic in the vicinity of the Holden Beach Bridge during the summer compared to the winter. If one assumes that the travel patterns of year round residents are similar to seasonal residents, this might suggest an average summer population of around 3,758 (2004 population = 835 x 4.5). However, since the summer traffic counts include people visiting the beach, this likely overestimates the average seasonal population.

It is also possible to estimate seasonal population by comparing water consumption and wastewater discharges during summer and winter months using the figures provided later in Section VII. Holden Beach reads residential water usage quarterly; therefore, collected water usage data during 2005 has been divided by three to get the average monthly usage. The lowest months for average daily use of water were October, November and December, with 4,048,680 gallons of water used per month. The highest months for average daily use were April, May and June, with 18,343,433 gallons used per month. Accordingly, average daily water use is 4.53 times greater during summer months. If we assume that water use patterns

among seasonal residents during summer months are similar to permanent residents in winter months, then the average seasonal population would be approximately 3,566. This population estimate is very similar to the one obtained using the traffic count data. However, irrigation usage is included in these water usage counts. Since 30 percent or more of summer water usage could be associated with irrigation and other outdoor uses, the population estimate based on water usage is likely to be a high estimate.

Using the water usage data as a population estimation technique, the average seasonal population appears to be approximately 3,566. Since the water consumption numbers are based on average daily use, it is important to remember that the population for five weekdays could be much lower than the two weekend days. Using the following algebraic formula, it is possible to estimate various peak seasonal populations based on different assumptions about the summer weekday populations:

$$\begin{aligned}2x + 5y &= 3,566 \times 7 \\2x &= 24,962 - 5y \\x &= 12,481 - 5/2y\end{aligned}$$

Where

x = population on a weekend day

y = population on a weekday

Using this formula, a population of 3,000 on a summer weekday equates to 4,981 on a weekend day. Similarly, a population of 1,500 on a summer weekday equates to 8,731 on a weekend day. These estimates are substantially lower than the estimates of the peak seasonal population described in the previous section which seems to indicate that the vacant and seasonal housing units may not be occupied at the assumed rate, or by the assumed number of persons.

Section 4

Natural Systems

4.0 Introduction

Protecting and enhancing Holden Beach's natural systems is critical to the quality of life of residents and visitors. Previous land use plans for the Town demonstrate a strong commitment to protecting its beautiful and abundant natural resources. Accordingly, any residential, commercial, or other development activities permitted by the Town of Holden Beach shall be compatible with current regulations, development patterns, Areas of Environmental Concern (AEC), wetlands requirements, and soil suitability, and measures must be taken to mitigate any potential environmental degradation. This section of the land use plan describes and analyzes the natural features and environmental conditions within the jurisdiction of the Town of Holden Beach.

One of the basic purposes of North Carolina's Coastal Area Management Act (CAMA) is to establish a management program capable of rational and coordinated management of coastal resources. Development of local land use plans and the designation and regulation of AECs provide the foundation for North Carolina's coastal resource management program. In combination, these mechanisms allow state and local governments to preserve and enhance the state's coastal resources. State guidelines have been adopted to ensure uniformity and consistency in land use plans and in the regulation of AECs; local governments, however, have significant flexibility when developing policies and taking actions to protect them. Accordingly, an important component of this plan is to identify those AECs present within the Town's jurisdiction.

4.1 Areas of Environmental Concern

The *State Guidelines for Area of Environmental Concern* (15A NCAC 7H, or regulations governing development for AECs) require that local land use plans give special attention to the protection of appropriate AECs. CAMA charges the Coastal Resources Commission (CRC) with the responsibility for identifying the areas—water and land—in which uncontrolled or incompatible development might result in irreversible damage. CAMA further instructs the CRC to determine what development activities are appropriate in such areas, and local governments are required to give special attention to these areas when developing land use plans. An AEC is an area of natural importance designated by the CRC. An AEC may be easily destroyed by erosion or flooding. It may also have environmental,

social, economic or aesthetic values worthy of protection. AECs have also been designated to protect them from uncontrolled development that causes irreversible damage to property, public health, or the environment.

To limit detrimental impacts on AECs, CAMA established a permitting program. The intent of the permitting program is not to stop development, but rather to ensure the compatibility of development with continued productivity and value of critical land, waters and natural resources. Responsibility for the permitting program is shared between the CRC and local governments. Local governments permit “Minor” development activities while “Major” development activities require permits from the CRC (DCM personnel are the staff representatives of the CRC). This permitting process is discussed in Section V.

The CRC established four categories of AECs:

- Estuarine and Ocean Systems
- Ocean Hazard Systems
- Public Water Supplies
- Natural and Cultural Resource Areas

Two categories of AECs not present within the jurisdiction of the Town of Holden Beach are public water supplies and natural and cultural resources areas. The two categories found within the Town’s jurisdiction are *Estuarine and Ocean Systems*, and *Ocean Hazard Systems*. As a result, shoreline erosion is an important issue for residents in the Town of Holden Beach. According to a study conducted by the NC Division of Coastal Management, the long-term average annual erosion rate within the Town of Holden Beach is 2 feet per year.

4.1.A Estuarine and Ocean System

The *estuarine and ocean system AEC* is a broad category that includes the Town’s sounds, marshes, and the surrounding shorelines. The system includes the following components:

- Estuarine waters;
- Estuarine shorelines;
- Coastal wetlands; and,
- Public trust areas.

4.1.A.1 Estuarine Water: Estuarine waters include all waters of the Atlantic Ocean with the boundary of North Carolina and all waters of the bays, sounds, rivers, and tributaries seaward of the dividing line between coastal fishing waters and inland fishing waters (*GS 113A-113(b)(2)*). Holden Beach’s estuarine waters include the Intracoastal Waterway (ICWW), Lockwood Folly Inlet, and Shallotte River. Estuaries are extremely productive natural systems [See Coastal Wetlands Areas and Protected Lands Map in Appendix A].

Estuarine waters in and around Holden Beach provide important habitat for a diverse range of shellfish, birds and other forms of marine wildlife. Important habitat features of an

estuarine system include its mud and sand flats, eel grass beds, salt marshes, submerged vegetation flats, and clam and oyster beds. They provide nursery areas and serve as habitat for a variety of marine and benthic species. Generally speaking, development activities which are water dependent and require water access and cannot function elsewhere (e.g., simple access structures, structures to prevent erosion, boat docks, marinas, wharves and mooring piling) may be allowed within this AEC.

4.1.A.2 Estuarine Shoreline: The estuarine shoreline is the non-ocean shoreline, extending from the normal high water level or normal water level along the estuarine waters, estuaries, sounds, bays, fresh and brackish waters, and public areas (15NCAC 7H.0209). For non-Outstanding Resource Waters, the estuarine shoreline is defined as 75-foot landward from mean high water line (MHWL) [See Estuarine Waters and Closed Shellfish Areas Map in Appendix A]. For Outstanding Resource Waters (ORW) the distance is 575 feet; there are, however, no ORW waters within the town of Holden Beach's planning jurisdiction. CAMA permits control development within the shoreline areas. Generally, development in this area may not weaken natural barriers to erosion, must have limited hard surfaces, and must take steps to prevent pollution of the estuary by sedimentation and runoff.

4.1.A.3 Coastal Wetlands: The U.S. Army Corps of Engineers (COE) defines wetlands as those areas inundated and saturated by surface or ground water at a frequency and duration to support, and that under normal circumstances support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands have significant values that support the unique lifestyle and quality of life enjoyed by Holden Beach residents and visitors. These values include:

- **Water Storage:** wetlands are able to store heavy rain, surface runoff, and flood waters, and thereby reduce downstream flooding;
- **Shoreline Stabilization:** ground cover and roots of wetland plants help hold soils in place and prevent sedimentation and nutrient transport;
- **Water Quality:** wetlands plants can enhance water quality by removing pollutants from surface water runoff;
- **Wildlife and Aquatic Habitat:** the variety of plants, hydrologic and soil conditions associated with wetlands provide abundant food and cover for animal populations and support a number of endangered species and other rare plants and animals; and,
- **Recreation and Education:** the rich array of plants and animals supported by wetlands provide significant consumptive and non-consumptive use values such as hunting, fishing, bird watching, kayaking, etc.

CAMA defines coastal wetlands as any salt marsh or other marsh subject to regular or occasional flooding by tides and contains some, but not necessarily all of the following marsh plant species: Cord Grass, Black Needlerush, Glasswort, Salt Grass, Sea Lavender, Bulrush, Saw Grass, Cat-tail, Salt Meadow Grass, and Salt Reed Grass. This definition does not include flooding by tides associated with hurricanes, tropical storms, or severe weather events (15A NCAC 07H.0206).

Primary and secondary nursery areas are not present in the Town of Holden Beach. However, there is a fish nursery present across the Intracoastal Waterway from Holden Beach's west end [See Significant Natural Heritage and Fish Nursery Areas Map in Appendix A].

Holden Beach has coastal wetlands of the brackish saltwater variety. There are 820 acres of wetlands within Town limits, of which 370 acres are coastal wetlands or salt water marsh [See NC CREWS Exceptional and Substantial Wetlands Map and the Coastal Wetland Areas and Protected Lands Map in Appendix A]. Coastal wetlands are considered to be unsuitable for all development activities and other land uses that alter their natural functions.

4.1.A.4 Public Trust Areas: Public trust areas include coastal waters and the submerged tidal lands below the MHWL. The water and submerged tidal lands are held in trust for the public to use through such activities as fishing, swimming, and boating. These areas will often overlap with estuarine waters, but they also include many inland fishing waters. As general guidance, the following lands and waters are considered to be public trust areas:

- All waters of the Atlantic Ocean and the lands underneath, from the MHWL seaward to the state's official boundary three miles offshore;
- All tidally influenced waters below and associated submerged lands below the MHWL;
- All navigable natural water bodies and the lands underneath from the normal high water line seaward (Navigable waters include anything you can float a canoe in). This does not include privately owned lakes where the public does not have access rights;
- All water in artificially created water bodies that have significant public fishing resources and are accessible to the public from other waters; and,
- All waters in artificially created water bodies where the public has acquired rights by prescription, custom, usage, dedication or any other means (CAMA Handbook for development in coastal North Carolina).

Accordingly, the Town of Holden Beach's public trust waters include all estuarine waters, their tributaries, and the Atlantic Ocean.

Since the submerged tidal waters are held in trust for the public, the state's policy is to ensure the maintenance of public access to these waters. Accordingly, development, structures, and land uses that interfere with public's rights to access and use of these waters is inconsistent with state policy. Conversely, navigation channels, piers, marinas, and bulkheads to control erosion are examples of uses that are frequently considered to enhance the public's use of these public trust areas.

An issue of growing concern in Holden Beach is the growth in user conflicts associated with impacts of recreational use on marine habitat. Holden Beach is inhabited by endangered sea turtles, as well as, threatened shore birds. The impacts of recreational users such as beachgoers, fishermen, and swimmers may disrupt the activities of these marine animals. The

town is concerned with the delicate balance between protecting animals and allowing the public beach accesses.

A second issue concerns zoning for private land versus setting land aside for conservation. Land that is zoned for private use and development is more profitable in the short term whereas land zoned for conservation will improve the quality of life on the island for citizens, as well as, the environment.

4.1.B Ocean Hazard System

Ocean Hazard AECs are areas where potential erosion and the adverse impact of sand, wind, and water make uncontrolled or incompatible development unreasonable and hazardous to life and property. The Ocean Hazard category at Holden Beach includes four areas:

- Ocean erodible area
- High hazard flood area
- Inlet hazard area
- Unvegetated beach area

Development and land use in each area require a minor or major CAMA development permit. These areas are also addressed through the implementation of the *Holden Beach Hazard Mitigation Plan*.

4.1.B.1 Ocean Erodible Area: Ocean erodible areas are located along the beach strand where there is significant risk of excessive beach erosion and significant shoreline fluctuation due to natural processes such as hurricanes and tropical storms (15 NCAC 07H.0304). There are 205 acres of oceanfront property on Holden Beach. The seaward boundary of this area is the mean low water line (MLWL). The landward boundary is described as follows:

- A distance landward of the recession line described in (1) above to the recession line that would be generated by a storm having a one-percent chance of being equaled or exceeded in any given year (i.e., 100-year storm event).

The ocean erodible area is defined on a lot-by-lot basis due to the significant variation in the first line of stable vegetation; the most restrictive method for determining the setback distance and the recession line is always used (15 NCAC 7H.0304).

4.1.B.2 High Hazard Area: The ocean hazard system AEC also covers lands subject to flooding, high waves, and heavy water currents during a major storm. The *high hazard flood area* is defined as the area subject to high velocity waters including, but not limited to, hurricane washover in a storm having a one percent chance of being equaled or exceeded in any given year. This area is identified as coastal flood with velocity hazard or “V zones” on Federal Flood Insurance Rate Maps. “V zones” are determined by an engineering analysis of expected flood levels during a storm, expected wave and current patterns, and the existing topography of the land. The high hazard flood area is land expected to experience washover

and high velocity waters during a 100-year storm event. This AEC often overlaps with the ocean erodible and inlet hazard AECs. The interior of Holden Beach along the sound are in the “A zone” this includes land on both sides of the bridge. “A zones” are subject to flooding and washover, but not wave action during a 100-year storm event. The entire Town of Holden Beach lies within the 100-year flood zone [See the Special Flood Hazard Areas Map in Appendix A]. Development in A and V zones is subject to the same setbacks described in the ocean erodible areas.

4.1.B.3 Inlet Hazard Area: The inlet hazard area AEC covers the land adjacent to the Shallotte River located on the western end of the island and Lockwood Folly Inlet, located at the eastern end of Holden Beach. The *Inlet Hazard Area* extends inland a sufficient distance to encompass the area where the state reasonably expects the inlet to migrate in the future (15 NCAC 7H .0304). The Shallotte River *Inlet Hazard Area* includes 47 acres on the western end. The Lockwood Folly *Inlet Hazard Area* includes 40 acres on the eastern end.

4.1.B.4 Unvegetated Beach Area: The final ocean hazard system AEC is the unvegetated beach area. This is defined as land within the ocean hazard system where no stable natural vegetation is present. This area is subject to rapid and unpredictable landform change from wind and wave action.

4.2 Soil Characteristics

Three soil types are located within the jurisdictional boundaries of Holden Beach. Newhan Fine Sand consists of gently sloping, excessively drained sands located mostly on dunes, beaches and along coastal waterways. Almost the entire barrier island portion of Holden Beach consists of Newhan Fine Sand; this soil type makes up 1,050 acres on the island. Corolla Fine Sand makes up 165 acres on Holden Beach. Corolla Fine Sand is a soil type that is nearly level and is poorly drained to moderately well drained. Surface runoff is slow with rapid permeability and a high seepage rate. Duckston Soil makes up 25 acres of Holden Beach. This soil type is a fine sand grain that is nearly level but poorly drained. This soil is found in areas that join the marshes in the coastal area. Surface runoff is very slow with extremely rapid permeability. The water table is one to two feet below the surface, fluctuating with the tide and is subject to occasional flooding.

All three soil types found on Holden Beach have limited development potential for onsite sewage disposal systems (OSDS) due to poor filtration or being wet with poor filter. However, these soil conditions are of limited importance because Holden Beach is served by a central sewer system.

4.3 Water Quality

Surface water should contain a balanced amount of nutrients and have normal fluctuations in salinity and temperature. It should also have plenty of oxygen and little suspended sediment so that marine life can breathe and receive enough sunlight to grow. Monitoring changes in

North Carolina's water quality is important. Data collected helps scientists evaluate changing water quality conditions. Factors affecting water quality include:

- **Nutrients:** While essential for plants and animals, they can be harmful if there is an overabundance;
- **Sediments:** Can cloud the water and hamper the growth or even kill aquatic plants;
- **Water temperature:** Changes in normal water temperatures can affect when animal and plants feed, reproduce, and migrate;
- **Salinity:** Changes in salinity can adversely affect a wide range of marine life;
- **Dissolved oxygen:** Is essential for animals living within the estuary. Reduced levels of dissolved oxygen (e.g., due to an algae bloom or eutrophic conditions) can adversely affect marine life; and,
- **Contaminants and other pollutants:** There are a variety of contaminants and pollutants that can adversely affect the growth, survival, and reproduction of marine and benthic organisms.

As a strategy for the management of North Carolina's waters, DENR's Division of Water Quality (DWQ) assigns classifications to water bodies. The primary classifications are:

- **SC** : unacceptable quality.
- **SB**: suitable for marine fish, shellfish, and wildlife habitat. Not suitable for commercial shellfish harvesting. Suitable for swimming, fishing, recreation and all other legitimate uses including navigation.
- **SA**: suitable for marine fish, shellfish and wildlife habitat, shell fish harvesting for direct human consumption, recreation and all other legitimate uses including navigation.

Additional water quality classifications include:

- **High Quality Waters (HQW):** Waters are ranked as high quality based on biological, chemical or physical characteristics through division monitoring or special studies.
- **Outstanding Resource Waters (ORW):** Unique and special surface waters of the state that are of exceptional state or national ecological or recreational significance that require special protection to retain existing uses.
- **Swamp Waters (SW):** Waters that are located so as to generally have low velocities.
- **Nutrient Sensitive Waters (NSW):** Waters that experience or are subject to excessive bloom of microscopic or macroscopic vegetation.

These designations highlight important characteristics of water bodies that should be protected through local land use plans.

Table 4.1 Receiving Streams Adjacent to Holden Beach

Receiving Stream Name	Stream Segment	Water Quality Classification	Use Support Rating	Water Quality Issues
Shallotte River	From source to NC Highway 130	C, SW, HQW	Supporting Aquatic life	Good-fair benthic rating; these are freshwaters
Shallotte River	From NC Highway 130 to US Highway 17	SC	No data	
Shallotte River	From US Highway 17 to mouth of the Mill Pond	SC, HQW	No data	
Shallotte River	From mouth of the Mill Pond to Intracoastal Waterway	SA, HQW	Impaired for shellfish harvesting	Waters are classified as SA but are impaired to shellfish harvesting due to Department of Environmental Health (DEH) shellfish ratings.
Intracoastal Waterway	From the Cape Fear River Basin Buoy to the North Carolina-South Carolina state line	SA, HQW	Impaired for shellfish harvesting	Waters are classified as SA but are impaired to shellfish harvesting due to Department of Environmental Health (DEH) shellfish ratings.
Lockwood Folly River	From source to Intracoastal Waterway	SA, HQW	Impaired for shellfish harvesting	Waters are classified as SA but are impaired to shellfish harvesting due to Department of Environmental Health (DEH) shellfish ratings.

Source: Cape Fear Council of Governments GIS
2003 Lumber River Basinwide Water Quality Plan, DWQ

The water quality of surface waters within the planning jurisdiction of the Town of Holden Beach generally do not support their intended uses. All waters within the town of Holden Beach are classified as SA waters; however, these waters have been classified as impaired for shellfish harvesting based on the most recent Lumber River Basinwide Water Quality Plan prepared by DWQ in 2003.

The Intracoastal Waterway, as well as the canals present on the island are classified as SA HQW Waters. Additional marsh areas are classified as SA waters. Land areas along the canals are developed with residential construction; consequently, the waters in the canals, as well as, the outlying areas of the Intracoastal feeding into the canals are closed to shellfishing. An additional area just west of the Holden Beach bridge, in the Intracoastal Waterway adjacent to the mainland is also closed to shellfishing [See Estuarine Waters and Closed Shellfish Areas Map in Appendix A]. DWQ will begin to prepare a new Lumber River Basinwide Water Quality Plan in 2007.

4.4 Shellfishing & Primary Nursery Areas

As noted in the previous section and summarized in Table 4.1, there are a number of waters in and adjacent to the Town of Holden Beach that are closed to shellfishing. These areas are illustrated graphically on the Estuarine Waters and Closed Shellfish Areas Map contained in Appendix A. These closures are due primarily to stormwater runoff and other nonpoint sources of pollution, both from within the Town of Holden Beach and surrounding areas in the County located within the watershed.

Salt marshes and estuaries along the North Carolina coast serve as nursery grounds for 90 percent of fish species. North Carolina was the first state to protect these fragile ecosystems. The nursery system in North Carolina contains three categories:

- Primary nursery areas;
- Secondary nursery areas; and,
- Special secondary nursery areas.

There are not any categories of fish nurseries present in Holden Beach [See Significant Natural Heritage and Fish Nursery Areas Map in Appendix A]. Primary nursery areas are generally located in the upper portions of creeks and bays. These areas are usually shallow with soft muddy bottoms and are surrounded by marshes and wetlands. Low salinity levels and abundance of food make these areas ideal for young fish and shellfish. To protect juveniles, many commercial fishing activities are prohibited in primary nursery areas including the use of trawl nets, seine nets, dredges, or any mechanical devices used to harvest clams and oysters. Violators face substantial penalties. In North Carolina, 80,144 acres are designated as primary nursery areas.

Secondary nursery areas are located in the lower portions of creek and bays. Young fish and shellfish (primarily blue crabs and shrimp) move into these waters as they grow and develop. Trawling is not allowed in secondary nursery areas. There are 35,502 acres of secondary nursery areas in North Carolina, none of which are located in Holden Beach. *Special secondary nursery areas* are located adjacent to secondary nursery areas but are closer to open waters of sounds and the ocean. When juvenile species are abundant, these waters are closed to trawling for a majority of the year. In North Carolina, 31,362 acres are designated as special secondary nursery areas.

4.5 Hazards

The Town of Holden Beach is located along the southern coast of Brunswick County. It is a barrier island bordered by the Atlantic Ocean and the ICWW. Due to its geographic location, the town is susceptible to a variety of natural and manmade hazards such as flooding, hurricanes, nor'easters, severe thunderstorms, tornadoes, tsunamis, and urban fires. These hazards are described in the following sections and discussed in greater detail in the *Holden Beach Hazard Mitigation Plan*.

4.5.A Flood Hazard Areas

The 100-year flood plain is the accepted benchmark for defining flood hazard areas. All of Holden Beach lies within the 100-year flood plain [See Special Flood Hazard Areas Map in Appendix A]. The flood plain in Holden Beach includes:

- **AE zones:** Special flood hazard areas inundated by the 100-year flood (one percent chance of a hundred year flood event); base flood elevations are determined;
- **VE zones:** Special flood hazard areas inundated by the 100-year flood (one percent chance of a hundred year flood event); coastal floods with velocity hazards (wave action); base flood elevations are determined.

The interior of the island, from Heron Landing to Sand Dollar Road on the sound side, is in the A zone, subject to washover and flooding. There are portions of the western end of the island starting at Seaside going west that are in the A zone. The eastern end of Holden Beach has land in the A zone starting at Sandspur and going east along the sound side. This constitutes about 762 parcels, 21 percent of which have structures. Development in these areas is subject to the same setbacks described in the ocean erodible area. However, the setback is doubled for multi-family residential and non-residential structures of more than 5,000 square feet. “V zones” are determined by an engineering analysis of expected flood levels during a storm, expected wave and current patterns, and the existing topography of the land. Generally, development is discouraged in these areas because the land is subject to flooding, high waves and heavy water currents during a major storm. There are approximately 2,675 parcels located within the VE zone on Holden Beach, 76 percent of which have structures. V zones are prevalent along the Atlantic Ocean side of the entire island [See Special Flood Hazard Areas Map].

4.5.A.1 FEMA Flood Insurance: According to the Federal Emergency Management Agency (FEMA), there are 4,406,664 flood insurance policies in force. Flood insurance is available in 19,859 participating communities nationwide including Holden Beach where 1,990 policies are in force valued at \$446,189,100. Since 1978, there have been over 2,023 documented losses with payments exceeding \$11,138,855.

One way to help minimize these losses and lower flood insurance premiums is to participate in the National Flood Insurance Program's (NFIP) Community Rating System (CRS). The CRS is a voluntary incentive program that recognizes and encourages community floodplain management activities that exceed the minimum NFIP requirements. As a result, flood insurance premiums are discounted to reflect the reduced flood risk resulting from the community actions meeting the three goals of the CRS: (1) reduce flood losses; (2) facilitate accurate insurance rating; and (3) promote the awareness of flood insurance. For CRS participating communities, flood insurance premiums are discounted in increments of five percent. A class 1 community receives a 45 percent premium discount while a Class 9 community gets a five percent discount (a Class 10 is not participating in the CRS and receives no discount). The CRS classifications for local communities are based on 18

Table 4.2: Parcels Located in the Flood Zone

Zone	Parcels (lots) that Intersect Flood Zone	Parcels (lots) with Structures (%)
AE	762	21
VE	2,675	76

Source: Cape Fear Council of Governments GIS

Table 4.3: Flood Insurance Policies

	Number of Policies	Insurance in Force
Holden Beach	1,990	\$446,189,100
North Carolina	117,904	\$22,627,525,500

<http://www.fema.gov/business/nfip/statistics/pcstat.shtm>

Table 4.4: Loss Statistics for Holden Beach and Brunswick County, North Carolina (1978 - 2006)

	Total Losses	Total Payment
Holden Beach	2,023	\$11,138,855.06
Wilmington	218	\$2,876,473.44
Brunswick County	347	\$3,666,015.06
North Carolina	59,482	\$721,200,311.85

http://bsa.nfipstat.com/reports/1040_200602.htm

creditable activities, organized under four categories: (i) public information; (ii) mapping and regulations; (iii) flood damage reduction; and, (iv) flood preparedness. There are 994 communities receiving flood insurance premium discounts based on their implementation of local mitigation, outreach, and educational activities that go beyond minimum NFIP requirements. While premium discounts are one benefit of participating in the CRS, the real benefit is that these activities help save lives and reduce property damage. Holden Beach has received a rating of 8 in the CRS; this translates into a ten percent premium discount.

4.5.B Hurricanes

One of the main flooding threats is from hurricanes. A hurricane is a cyclonic storm that originates in tropical ocean waters. As a hurricane develops, barometric pressure at its center falls while its winds increase. Winds at or exceeding 39 miles per hour result in a named tropical storm that is closely monitored by the National Oceanic and Atmospheric

Table 4.5: Hurricanes and the Saffir-Simpson Scale

Category	Wind Speed (Mph)	Wind Damage	Storm Surge
1	74 – 96	Damage to shrubs, trees, foliage, and unanchored mobile homes. Some damage to poorly constructed signs.	Storm surge three to five ft above normal. Low lying roads inundated. Minor pier damage.
2	97 – 111	Considerable damage to shrubs, trees, and foliage. Some trees blown down. Major damage to exposed mobile homes. Excessive damage to poorly constructed signs. Some roof and building damage.	Storm surge six to eight ft above normal. Low lying roads inundated. Low lying escape routes cut by rising water two to four hours before storm’s arrival. Considerable pier damage. Marinas flooded. Evacuation of some shoreline and low lying areas required.
3	112 – 131	Foliage torn from trees. Large trees blown down. All constructed signs blown down. Some damage to roofing materials and buildings. Some window and door damage. Some structural damage to small buildings.	Storm surge five to 12 ft above normal. Serious flooding at coast, and many smaller structures near the coast destroyed. Larger structures near the coast damaged by battering waves and floating debris.
4	132 – 155	Shrubs and trees blown down. All signs down. Extensive damage to roofs, windows, and doors. Complete failure of roofs on many small structures. Complete destruction of mobile homes.	Storm surge 13 to 18 ft above normal. Major damage to lower floors of structures near the shore due to flooding and battering by waves and floating debris. Major beach erosion.
5	155+	Considerable damage to roofs of buildings. Severe and extensive damage to windows and doors. Complete failure of roofs on many structures. Extensive shattering of glass in windows and doors. Some complete building failure. Small buildings overturned or blown away.	Storm surge possibly greater than 18 ft above normal. Major damage to lower levels of all structures less than 15 ft above mean sea level.

Administration’s (NOAA’s) National Hurricane Center [Table 4.5]. When winds exceed 74 miles per hour, it becomes a hurricane.

Hurricanes are judged by their power according to the Saffir-Simpson Scale. This measure of the power of a hurricane classifies hurricanes according to a sliding scale from one to five (with category five storms as the most severe) [Table 4.5]. Since hurricanes derive their strength from warm ocean waters, they generally deteriorate in intensity when they make

Table 4.6: Approximate Impact of Various Storm Levels (Acres Impacted)

Storm Level	Additional Land Impacted (Acres)	Total Land Impacted (Acres)
1-2	1224 acres	1224
3	13 acres	1237
4-5	3 acres	1240

Source: Cape Fear Council of Governments GIS

landfall. The forward momentum at the time of landfall can range from just a few miles per hour to upwards of 40 miles per hour. The forward motion, combined with the counterclockwise surface flow, make the front right quadrant of the hurricane the most dangerous in terms of damaging winds and storm surge.

4.5.B.1 Storm Surge Areas: Since Holden Beach is located entirely within the 100-year floodplain, it is particularly vulnerable to storm surges and corresponding erosion, wave action, flooding, high winds, and beach washover associated with hurricanes. Storm surge is water pushed toward the shore by the force of winds swirling around the hurricane or low-pressure meteorological system. The advancing surge combines with the normal tides to create the hurricane storm tide otherwise known as the storm surge. As a result, the MHWL can rise by 15 feet or more. The rise in water level causes severe flooding in coastal areas, particularly when a storm surge coincides with high tide. Wind and wave action is then superimposed on this storm surge water level.

Wind is a major determinant in the classification of a hurricane. Any tropical storm with sustained winds of 74 mph is classified as a hurricane. Hurricanes are judged by their power according to the Saffir-Simpson scale. This measure of the power of a hurricane classifies hurricanes according to a sliding scale from one to five (with category five storms as the most severe).

The speed and strength of the storm is important in determining the impact of the storm surge. Waves and currents associated with the storm surge may cause extensive damage. Water weighs approximately 1,700 pounds per cubic yard; periods of prolonged wave action can demolish any structure not specifically designed to withstand such forces. Table 4.6 shows the acreage of land impacted by storm surge for a fast moving hurricane at various storm levels. The areas subject to storm surges are depicted graphically on the Map of Storm Surge Inundation From a Fast Moving Hurricane in Appendix A.

Table 4.7: Fujita-Pearson Tornado Scale

F-Scale	Damage	Winds (Mph)	Path Length (mi)	Mean Width (mi)
F 0	Light	40 – 72	<1	<0.01
F 1	Moderate	73 – 112	1 – 3.1	0.01 – 0.03
F 2	Considerable	113 – 157	3.2 – 9.9	0.04 – 0.09
F 3	Severe	158 – 206	10 – 31	0.1 – 0.31
F 4	Devastating	207 – 260	32 – 99	0.32 – 0.99
F 5	Incredible	261 – 318	>100	>1
EF-Scale	Damage	Winds (Mph)		
EF0	Light	65-85		
EF1	Moderate	86-110		
EF2	Considerable	111-135		
EF3	Severe	136-165		
EF4	Devastating	166-200		
EF5	Incredible	>200		

4.5.C *Nor'Easters*

Another type of storm event with the potential for damage and severe beach erosion is what is known as a nor'easter. Unlike hurricanes, these storms are extra-tropical, deriving their strength from horizontal gradients in temperature. Although nor'easters are more diffuse and less intense than hurricanes, they occur more frequently, cover much larger stretches of shoreline, and can last much longer. As a result, they can occur more frequently than hurricanes and while their damage is less, they can cause coastal flooding, wind damage, and severe beach erosion. A number of nor'easters have impacted North Carolina in recent decades, including the nor'easter in March 1983 that brought widespread flooding and beach erosion. Another severe nor'easter hit the Outer Banks on Halloween 1991 and caused substantial beach erosion.

4.5.D *Severe Thunderstorms*

Thunderstorms are common throughout North Carolina and can occur in all months. Thunderstorms are the result of atmospheric instability and convection due to temperature differentials. Severe thunderstorms can contain tremendous amounts of energy and can bring lightning, damaging wind gusts, hail, and wind shears. Severe thunderstorms can damage trees and cause extensive property damage and power outages. They can also be associated with tornadoes.

4.5.E Tornadoes

The national weather service defines a tornado as a violently rotating column of air in contact with the ground and extending from the base of a thunderstorm. The Fujita-Pearson Tornado Scale rates tornadoes based on path, length, width, and intensity [Table 4.7]. Historical tornado activity in the Holden Beach area is below the North Carolina state average. It is 33 percent smaller than the overall U.S. average. On August 17, 1965, an F 3 tornado 27 miles away from the Holden Beach city center injured 46 people and caused between \$50,000 and \$500,000 in property damage. On October 9, 1950, an F 3 tornado 27.8 miles away from the Holden Beach city center injured three people and caused between \$50,000 and \$500,000 in property damage. Although tornadoes can occur throughout the year, most occur during the spring months of March (13 percent), April (11 percent), May (22 percent), and June (14 percent).

The Enhanced Fujita Scale, or EF Scale has been implemented in place of the now-obsolete Fujita scale, it is used starting February 1, 2007. The scale has been revised to reflect better examinations of tornado damage surveys, so as to align wind speeds more closely with associated storm damage. The new scale takes into account how most structures are designed. New “EF” categories associated with the Enhanced Fujita Scale are listed in Table 4.7.

4.5.F Urban Fires

Urban fires are a manmade hazard. They occur in populated areas and usually involve buildings, structures, or outside areas. The potential for the spread of urban fires depends upon surface and fuel characteristics, recent climatic conditions, and current meteorological conditions, particularly wind. The likelihood of an urban fire in Holden Beach is not much different than other towns. However, the likelihood of an urban fire spreading rapidly is high given the limited set backs and the large number of structures with wooden patio style sun decks, which can act as fuel to spread urban fires. Other combustible materials such as landscaping materials, stairs, lattices, AC mounting structures, fences, and cars located in setbacks can further increase the likelihood of a fire spreading to adjacent structures. Moreover, if a fire starts to spread, the fact that many houses are located on dead end streets that are not easily accessible can hinder or delay rescue and firefighting efforts.

4.6 Non-coastal Wetlands

Within the planning jurisdiction of the Town of Holden Beach, there is also one acre of non-coastal wetlands located in the corporate limits. This freshwater wetland is located west of Sand Dollar Road. These non-coastal wetlands are classified as exceptional significance, not high potential risk [See NC CREWS Exceptional and Substantial in Appendix A].

4.7 Water Supply and Wellhead Protection Areas

The DCM maps show two watersheds in the vicinity of Holden Beach. One of the watershed areas is located starting at the NC 130 bridge going west to the Shallotte River Inlet. The other watershed area is located from the NC 130 bridge going east to the Lockwood Folly Inlet. The drinking water for the town of Holden Beach is supplied by the Brunswick County water system.

4.8 Environmentally Fragile Areas

Fragile areas are defined as sensitive areas that are easily destroyed by inappropriate or poorly planned development. Fragile areas include: AECs; coastal wetlands; non-coastal wetlands; sand dunes; ocean beaches and shorelines; estuarine waters; estuarine shorelines; public trust waters; complex natural areas; prime wildlife habitats; areas that sustain remnant species; areas with unique geologic formations; natural areas identified by the North Carolina Natural Heritage Program; and archeological and historical resources, as well as, other sensitive areas not currently protected under existing rules. Given its location, almost all of Holden Beach is located within or adjacent to fragile areas. Many of these areas have previously been discussed. This section describes natural heritage areas and the areas containing endangered species.

4.8.A *Natural Heritage Areas*

The North Carolina Natural Heritage Program inventories, catalogues, and facilitates protection of the rarest and most outstanding elements of the natural diversity of our state. This includes plants and animals that are rare, or natural communities that merit special consideration as land use decisions are made. The information generated by this program supports informed evaluations of the trade-offs between biological diversity and development projects before plans are finalized. The information also facilitates the establishment of priorities for protecting North Carolina's most significant natural areas.

There are no significant natural heritage areas identified within the planning jurisdiction of Holden Beach [See the Significant Natural Heritage and Fish Nursery Areas Map in Appendix A].

4.8.B *Areas Containing Endangered Species*

Endangered species describe plant or animal species in danger of extinction within the foreseeable future throughout a significant portion of its range. The term "threatened species" is used when a plant or animal is deemed likely to become endangered within the foreseeable future throughout all or a significant portion of its range. Areas that contain, or are likely to contain, endangered species in the Town of Holden Beach include the dry sand areas of the oceanfront beach, dunes, and the marshes along the estuarine shoreline.

Table 4.8: Environmental Composite Map Layers

Layer	Class I	Class II	Class III
Coastal Wetlands			X
Exceptional or Substantial Non-Coastal Wetlands			X
Beneficial Non-Coastal Wetlands		X	
Estuarine Waters			X
Soils with Slight or Moderate Septic Limitations	X		
Soils with Severe Septic Limitations (not included due to sewer system)			
Flood Zones		X	
Storm Surge Areas		X	
HQW/ORW Watersheds		X	
Water Supply Watersheds		X	
Significant Natural Heritage Areas		X	
Protected Lands			X

Endangered animals identified on Holden Beach include: various types of birds including the piping plover, a variety of sea turtles, and other transitory wildlife. In order to help preserve endangered wildlife, turtle nesting areas are marked each year in order to protect the nests. Holden Beach is considered a bird sanctuary. It is important to keep in close contact with state and local agencies charged with protecting endangered species and sightings of rare and endangered plants and animals should be reported.

4.9 Composite Map of Environmental Conditions

Under the updated CAMA planning guidelines, there is a requirement for the preparation of an Environmental Composite Map. This map works in conjunction with the Land Suitability Analysis (LSA) described in Section 8 and Map [Appendix C] to help determine the Future Land Use Map contained in Appendix D. The Environmental Composite Map is contained in Appendix C. It shows the extent and overlap of the environmental and natural features described in this section. Using the limitations and opportunities that features have to guide development decisions, the map shows the location of the following three categories of land:

- **Class I:** Land containing only minimal hazards and limitations that may be addressed by commonly accepted land planning and development practices. Class I land will generally support the more intensive land uses and types of development.
- **Class II:** Land containing development hazards and limitations that may be addressed by methods such as restrictions on types of land uses; special site planning; or the provision of public services. Land in this class will generally support only the less intensive uses, such as low density residential, without significant investment in services.

Table 4.9: Environmental Composite Class Acreages Summary

Class	Acre	% of Total
Class I	0	0.0%
Class II	948	84,3%
Class III	176	15.7%
TOTAL	1,124	100.0%

- **Class III:** Land containing serious hazards for development or lands where the impact of development may cause serious damage to functions of natural systems. Land in this class will generally support very low intensity uses such as conservation and open space.

The Environmental Composite map was prepared using GIS applications and data from state and local sources. The computer model divides the planning jurisdiction into one-acre grid cells. An overlay analysis was performed using map layers assigned to the classes indicated in Table 4.8. For any given one-acre cell, the computed value of the cell is determined by the highest class located within the cell. For example, if a cell contains coastal wetlands (Class III) and is in a storm surge area (class II) it is indicated as Class III on the map. If the cell has no land the containing Class III or Class II characteristics, it is classified as Class I land.

The class acreage is summarized in Table 4.9. As illustrated on the Environmental Composite Map in Appendix C, there are no Class I lands within Holden Beach. Much of the developed land area contained within the corporate limits of the Town of Holden Beach is Class II, moderately suitable for development. However, these areas have been developed and are Class I in nature. Areas along the oceanfront and marshlands along the Intracoastal Waterway are considered Class III lands, least suitable for development.

Section 5

Land Use and Development

5.0 Introduction

The Town of Holden Beach developed in a manner similar to that of other North Carolina barrier beach communities of comparable size. There is an accessible commercial area in the center of Town, and the remainder of the community is stretched out to the east and the west in a linear grid with residential development occurring on relatively small lots. A unique feature of the Holden Beach landscape are the man-made “finger” canals on the western portion of the island, that run from the Intracoastal Waterway, perpendicular to the Atlantic Ocean. The Town limits of Holden Beach end at the Intracoastal Waterway; no mainland properties fall within the Town’s jurisdiction. Holden Beach remains a relatively small community with a large influx of summer visitors. Accordingly, land use conflicts are limited primarily to issues related to the influx of tourists (e.g., traffic, litter, lighting and noise). The amount of commercial activity in the Town remains limited and there are no industrial or manufacturing uses.

The Town of Holden Beach has experienced relatively steady development in recent years and a few large tracts of land on the island are still undeveloped. Between January 1, 2000, and December 31, 2005, 272 permits for new construction were issued within the Town limits of Holden Beach. It is expected that the few large tracts of vacant land on the island will be developed within the next five years.

Accordingly, there is a need for the Town Council, Planning Board, and citizens to develop a consensus about the direction that future growth and redevelopment should take. This section of the land use plan describes current land use in the Town of Holden Beach. This information provides the foundation used to develop policies and recommendations contained in the plan for the future (Section 9).

Table 5.1: Land Usage in Holden Beach (2006)

	Acres*	Lots*	Percent Total (Acreage)	Acres per person**
Church	1.25	1	0.15	0.001
Civic Club, Lodge, Hall	3	3	0.37	0.004
Commercial	10.25	31	1.27	0.012
Common Area	22	2	2.72	0.026
Municipal	1	4	0.12	0.001
Residential	477	2,277	58.96	0.571
State Owned	29.25	2	3.62	0.035
Utilities Commercial	0.25	2	0.03	0.000
Vacant Land	265	910	32.76	0.317
Total "Usable" Land	809	3,232	100	0.967
Un-buildable (due to location on eroded or un-vegetated beach)	26	156		
Marsh/spoil	654	110		
Grand Total	1,489	3,498		

Source: Scott Logel, Cape Fear Council of Governments

* Land Use Acres and Lots were calculated using GIS to sum parcel areas based on land use codes.

**Acres per person calculated using the 2004 population estimate of 835 residents, as predicted by the U.S. Census Bureau; "un-buildable" acres were not included in the calculation.

5.1 Existing Land Use

The total land area within the Town of Holden Beach municipal boundary is 1,489 acres. This includes 26 acres considered to be "un-buildable" due to their location on an eroded or un-vegetated beach, and 654 are marshland or spoil. Thus, there are 809 acres of "usable" land within the Town of Holden Beach municipal boundary. Within the Town of Holden Beach there are 3,498 separate parcels of land (i.e., lots). Due to erosion and the existence of wetlands or "spoil" areas, there are 3,232 "usable" parcels of land. The number of total parcels in any type of land use is 3,322. The number of acres in the parcels being used is 544. There are approximately 910 vacant lots within the Town.

Table 5.1 shows various categories of existing land use within the Town of Holden Beach. This information is displayed graphically on the Existing Land Use Map located in Appendix A. The largest categories of developed land are residential (58.96 percent) and vacant (32.76 percent); these uses make up over 90 percent of the total land use within the Town of Holden Beach.

According to the North Carolina Department of Cultural Resources, State Historic Preservation Office, there has been no systematic survey conducted within the planning area so it is possible that some historic sites exist within the Town's planning area.

5.1.A Current Zoning Regulations

Zoning regulations allow the local government to segregate land uses that are thought to be incompatible. Only buildings or structures determined to be in conformity with the existing zoning regulations for their district are permitted to be constructed. The following sections describe the current zoning regulations for the Town of Holden Beach. An estimate of the vacant land remaining within each zoning district is also provided. A map of the Current Zoning Districts is included in Appendix A.

5.1.A.1 C Conservation District: The C district is established as a district in which the principal use of land is the effective long-term management and protection of significant, limited, or irreplaceable areas. Management is needed due to the natural, cultural, recreational, scenic, or natural productive values of local, regional, state, and national concern. Several large tracts of land on the western and central portions of the island comprise the C zoning district. The boundaries of this zoning district are located on the zoning map in Appendix A. Within the C zoning district, there are approximately 33 acres of vacant, usable land. Areas included within this district are depicted on the zoning map included in Appendix A, and include coastal wetlands, public trust waters, estuarine waters, ocean hazard and inlet hazard areas seaward of the first line of stable vegetation, and the Corps of Engineers A.I.W.W. right-of-way. Other large homogenous tracts of marshland within the Town are also classified as Conservation.

The intent of the Conservation class is to perpetuate the natural, productive, scenic, cultural, and recreational features of the coastal zone. Development activities within the Conservation category AEC's must be consistent with the regulations governing development. Suitable uses would include piers, docks, and gazebos, but no permanent commercial structures or habitable dwellings of any type.

5.1.A.2 R Rural District: The R district is established as a district in which the principal use of land is for single-family dwellings. Several large tracts of land in the central portion of the island comprise the R zoning district. The boundaries of this zoning district are located on the zoning map in Appendix A. Within the R zoning district, there is approximately one acre of vacant, usable land.

There is a maximum of 2.5 units per acre based on the area not defined as coastal wetlands. The minimum required lot area for this district is 6,000 square feet. Maximum building height is set at 35 feet from ground level. The lot coverage of the main structure shall not exceed 30 percent of the platted lot. All impervious structures outside of the main structure shall not exceed 30 percent of the buildable land less the area of the main structure.

Table 5.2: Dimensional Table of Conforming Uses for Zoning District R-1

	Lot (ft ²)	Lot Width (ft)	Front Yard (ft)	Side Yard (ft)	Rear Yard (ft)	Maximum Height (ft)
Single-family	5,000	50	25	5	20	35
Two-family	7,500	50	25	5	20	35

Table 5.3: Dimensional Table of Conforming Uses for Zoning District R-2

	Lot (ft ²)	Lot Width (ft)	Front Yard (ft)	Side Yard (ft)	Rear Yard (ft)	Maximum Height (ft)
Single-family	5,000	50	25	5	20	35
Two-family	7,500	50	25	5	20	35
Multi-family	7,500 for first two-family units, plus 2,000 for each additional family dwelling unit	50	25	5	20	35

5.1.A.3 RS Rural Special Use District: The RS district is established as a district in which the use of land is the Corps of Engineers spoil activities. Several large tracts of land in the central portion of the island comprise the RS zoning district. The boundaries of this zoning district are located on the zoning map in Appendix A. Within the RS zoning district, there are approximately 28 acres of vacant, usable land. Water dependent structures or uses, such as utility easements, docks (covered and uncovered), boatlifts, dolphins, boat ramps, dredging apparatus, bridge and approachments, revetments, bulkheads, culverts, groins, navigational aids, mooring pilings, navigational channels, simple access channels and drainage ditches, are permitted provided all town requirements are met.

5.1.A.4 R-1 Residential District: The R-1 district is established as a district in which the principal use of land is for one- and two-family dwellings. The majority of the property along the Holden Beach oceanfront, and a large portion of the property along the Intracoastal Waterway lie within the R-1 zoning district. The boundaries of this zoning district are located on the zoning map in Appendix A. Within the R-1 zoning district, there are 183 acres of vacant, usable land. The regulations of this district permit intensive development provided the necessary public and/or community water and sewer systems are available. Churches and cemeteries and public and private schools are also permitted uses within the R-1 zoning district. Some of the specific zoning requirements are contained in Table 5.2.

5.1.A.5 R-2 Residential District: The R-2 district is established as a district in which the principal use of land is for multi-family dwellings. Several areas of land in Holden Beach lie within the R-2 zoning district; these areas are scattered along the oceanfront, and lie within larger blocks on the eastern and western portions of the island. The boundaries of this zoning

Table 5.4: Dimensional Table of Conforming Uses for Zoning District C-1

Front Yard (ft)	Side Yard (ft)	Rear Yard (ft)	Maximum Height (ft)
25	5	5 * if the commercial use abuts a residential district, the rear yard requirement is 20	35

district are located on the zoning map in Appendix A. Within the R-2 zoning district, there are 11 acres of vacant, usable land. Some of the specific zoning requirements are contained in Table 5.3.

5.1.A.6 C-1 Commercial District: The Commercial District is established as the district in which a variety of sales and service facilities may be provided to the general public. The C-1 district lies in the vicinity of the Holden Beach Bridge, and in several blocks along the oceanfront. The boundaries of this zoning district are located on the zoning map in Appendix A. Within the C-1 zoning district, there are 9 acres of vacant, usable land. The specific intent is to encourage the construction of and the continued use of land and buildings for commercial and service uses; and to permit a wide range of uses within the Districts with standards prescribed so as to reduce adverse effects from locating enterprises near one another. Businesses, financial, governmental, medical, and professional offices, and agencies are permitted in this district; stores, services, and recreational businesses are also permitted. One-family, two-family, and multi-family dwellings are permitted uses. Some of the specific zoning requirements are contained in Table 5.4.

5.1.B Access to Public Trust Waters

Holden Beach recognizes that the public has certain established rights to certain land and water areas. In Holden Beach, the Intracoastal Waterway, Lockwood Folly Inlet, Shallotte Inlet, ocean beaches, and the Atlantic Ocean adjacent to the beaches are all Public Trust Areas. These areas support recreational uses such as swimming, boating, water skiing, sports fishing, and commercial fishing. These public areas also support valuable commercial and recreational fisheries, tourism, and are of significant aesthetic value. Appropriate uses include those which protect public rights for navigation and recreation.

Maintaining public access to public trust waters is a high priority for the Town of Holden Beach, and CAMA public beach accesses have been established along the shoreline of the Atlantic Ocean. The locations of these public access points are shown on the Existing Land Use Map in Appendix A.

5.1.C Land Use Conflicts

The land use conflicts that exist in the Town of Holden Beach are similar to those in other coastal communities. Land use conflicts are limited primarily to issues related to the influx of tourists (e.g., traffic, litter, lighting and noise). Conflicts also exist where residential development has occurred in flood hazard areas, although current zoning regulations have been established to reduce the impacts of flooding on residential areas. *(There has been some discussion regarding development in flood hazard areas as a “conflict”; however, the DCM Technical Guidance does refer to this situation as an example of a land use conflict.)*

5.2 Projection of Future Land Needs

When preparing a land use plan, it is often useful to consider how much land is likely to be needed to accommodate future development. As noted in Table 5.1, there are 2,277 residential parcels totaling 477 acres or about 59 percent of the buildable area in the Town. This equates to an average residential density of about .21 acres per unit (or about 4.77 units per acre). There are 910 vacant parcels of varying size that total 265 acres or 32.8 percent of the usable (i.e., buildable) land in the Town of Holden Beach. If all of this land were developed at a density of .25 residential units per acre, this would equate to 1,060 residential units. Since .25 acres per residence is less dense than what current zoning allows or the current density on the Island, it is clear that there is a large amount of buildable land left on the Island.

While it is unclear what a reasonable estimate of future population growth should be, Figure 3.3 illustrates three different scenarios for future population growth (See Section 3.1.B). The first assumes an annualized growth rate of just one percent, which is less than the 1.69 percent annualized rate the U.S. Census estimates for the 2000 to 2007 timeframe. This would yield a population in 2025 of 1,009 (increase of 222 people or 28 percent increase between 2000 and 2025). At the current household size of 2.08, this would require approximately 107 additional households or just 11.8 percent of the 910 undeveloped parcels (assuming just one housing unit per parcel even though many parcels can build multiple units under current zoning requirements) or 6.4 percent of the 1,683 vacant housing units in 2000. The middle estimate assumes a 3 percent annualized population growth rate, slightly less than two times the U.S. Bureau of Census estimate for the 2000 to 2007 period (1.69 percent). This would produce a population in 2025 of 1,648 people (109 percent increase). At the current household size this would require 414 households or 45.5 percent of the undeveloped parcels or just 24.6 percent of the vacant housing units. The final project assumes an unrealistic annualized growth rate of 5 percent. This would produce a 2025 population of 1,878 people (239 percent increase). The 903 new households would occupy nearly 99 percent of the vacant parcels but only 53.7 percent of the vacant housing stock. However, if one assumes that undeveloped parcels are occupied at a density of .25 units per acre on average, which is less than current zoning allows and the current average, under the extreme 5 percent annualized growth rate, the 903 households would occupy about 85 percent of the remaining buildable land. Thus, vacant land currently zoned as buildable is more than adequate to accommodate projected year round population growth under all three scenarios

even if none of these future households occupies one of the 1,683 vacant housing units in 2000.

Among all North Carolina barrier beaches, Holden Beach has the fourth lowest percentage of housing units that are occupied year-round (18.4 percent) [Table 3.1]. Thus, the construction of seasonal and rental homes, which are referred to as vacant housing units above, is likely to have a bigger impact on future land use. Unfortunately, the only good estimates of these changes are from the decennial censuses. Between 1990 and 2000 the total number of housing units increased from 1,320 to 1,683 or 27.5 percent [See Table 3.12 and 3.13]. While it is unlikely that this growth rate could be sustained until 2020, if one makes the conservative assumption that development continues at this pace, by 2020 1,053 additional housing units would be constructed. If these were built at the prevailing density of .21 units per acre, this development would occupy 221.13 (about 83.4.5 percent) of the remaining 265 acres of buildable vacant land.

Thus, the land zoned for future development on the Future Land Use Map [See Appendix D] should be adequate to accommodate future development activities. The Future Land Use Map in Appendix D contains the following designations that correspond to the following zoning districts:

- Commercial (with Residential): HB-C-1 (See Table 5.4, Section 5.1.A.6)
- Residential single-family (lower density): HB-R (See Section 5.1.A.2)
- Residential single-family and two family: HB-R-1 (See Table 5.2, See Section 5.1.A.4)
- Residential single-family/two-family/multi-family: HB-R-2 (See Table 5.3, See Section 5.1.A.5)
- Water dependent uses: HB-RS (See Section 5.1.A.3)
- Conservation: HB-C (See Section 5.1.A.1)

Each of the sections and associated tables describes the zoning district that corresponds to the future land use designations in greater detail.

Section 6

Community Facilities & Town Services

6.0 Introduction

The Town of Holden Beach has a Council-Manager form of government. The Board of Commissioners or Town Council consists of a Mayor and five commissioners elected at large every two years. The Board of Commissioners is the governing body of the Town with the Mayor the presiding officer. The Mayor serves as a voting member of the Board of Commissioners only in the case of a tie. The Town Administrator is appointed by the Board of Commissioners and administers the daily operations of the Town, as well as being responsible for implementing and explaining the policies of the Board of Commissioners.

Town departments include Town Administration, Planning & Inspections, Public Utilities, and Police. At the current time, no anticipated changes in the size or scope of the local government are planned. The following sections analyze community facilities and town services in order to identify potential issues warranting consideration in the plan for the future contained in Section 9.

6.1 General Administration

The General Administration Department is located in Town Hall and is responsible for a variety of services including preparation of agendas, correspondence and reports for the Mayor and Board of Commissioners; preparation and oversight of the annual budget; preparation of financial reports; investment of Town funds; preparation and processing of utility bills; and payments; and processing of accounts payable. This department is also responsible for maintaining financial and historical records for the Town and personnel records for Town employees.

6.2 Fire Protection & Emergency Medical Services

The Tri-Beach Fire Department provides services to the Town of Holden Beach. This is a combination station whose membership includes approximately 35 Volunteers, and 8 paid staff. The department is located at 854 Sabbath Home Road, in Supply, North Carolina. Equipment housed at the Supply fire station includes two ladder trucks, which help to service the taller buildings located in the Town of Holden Beach.. The fire insurance rating for Holden Beach is a Class 8. This translates to a 10 percent discount for insurance premiums.

The Tri-Beach Fire Department responds to approximately 350 calls per year. Once dispatched by the County's 911 center, the Fire Department's response time within Town limits is normally less than 8 minutes. During the summer months, however, responses can be delayed due to heavy traffic conditions.

Coastline Rescue and Brunswick County EMT currently provide on-call emergency medical services to Holden Beach.

Fire Department and emergency medical service resources are adequate to meet present needs. However, as the population of Holden Beach and surrounding areas increases, and the number of subdivisions increases, the Tri-Beach Fire Department seeks to move from a volunteer staff to a paid staff. Additionally, the Department seeks to expand their facilities and has recently purchased property near Ocean Harbor to construct an additional station.

6.3 Police Department

Holden Beach provides policing services for all the corporate limits through one police chief and nine full-time police officers. The department size was recently increased and two full time police officers were added (up from seven officers, three years ago). Once the two new officers are fully trained, this will allow for two officers to be on patrol on the island at all times. The Police Department tries to avoid hiring additional officers during the peak season, although civilian "beach ambassadors" are hired during the busy months to serve as points of contact for public information and to assist officers with beach patrol.

The Holden Beach Police Department has a mutual aid agreement with the Shallotte and Sunset Beach Police Departments and the Brunswick County Sheriff Department. A property identification program is available. The Brunswick County 911 system is utilized, and there is an emergency call box for the police located at the Town Hall.

Two large festivals are held on Holden Beach during the year, and the frequent turnover of visitors in summer months (due to the many rental properties on the island) creates challenges for the Police Department. Typical issues that require the services of the Holden Beach police force include drug seizures, robbery and theft, and parking issues.

Future demand for services is expected to increase; it is estimated that an additional two officers would be required to bring the number of officers to the staffing level of adjacent

beach communities. The Police Department will need to increase personnel staffing and equipment to meet the ever-increasing demands for services and increasing workloads. These demands can be attributed to the large influx of summer visitors, the growth of the Shallotte area's population and the tri-county area's population increase.

6.4 Planning Department

Holden Beach provides both Planning and Inspections for its residents. The function of the Planning Department is to ensure desirable growth within the Town's jurisdiction and to regulate zoning and various code enforcement functions. The Planning Department issues zoning permits and zoning violations. The purpose of the Inspections Department is to provide minimum standards for the protection of life, limb, health, property, and environment, and for the safety and welfare of the consumer, general public, and the owners and occupants of residential and commercial buildings by providing residents and contractors with inspections consistent with the North Carolina Building Codes. The Inspections Department performs Building, Electrical, Mechanical, Plumbing and Fire Inspections. An online building permit application and a zoning permit application are available on the Town's website.

6.5 Public Utilities Department

Holden Beach provides both water and sewer services to its residents. In 1999, the Town added a second water line across the Intracoastal Waterway to Seagull Drive in an effort to provide adequate water pressure during peak seasonal usage. The Town has also recently expanded the water meter size for the supply line that runs under the Holden Beach Bridge in an effort to ensure adequate water flow during times of peak demand.

The Town has recently completed the construction of the wastewater collection system in March 2006. Mandatory connection to this system is required for all properties by May 31, 2007

Future demands for water and wastewater services are discussed in Section VII, where a more in-depth discussion of the public utilities is provided.

Table 6.1: School Capacity and Enrollment

School	Fall 2006 enrollment	Capacity	Percent Occupied
Union Elementary (K-5)	653	726	89.9
Virginia Williamson Elementary (K-5)	572	590	96.9
South Brunswick Middle School (6-8)	907	789	115.0
South Brunswick High School (9-12)	1,050	1,075	97.7

Source: Draft Brunswick County CAMA Core Land Use Plan – 5/23/06

6.6 Schools

There are relatively few school-age children in Holden Beach, and they attend schools in the Shallotte area. According to the 2000 U.S. Census, there were 72 children in Holden Beach who were ages five through 17. This comprises nine percent of the 2000 year-round population. By and large, Holden Beach residents consist of middle-age adults and retirees and this trend is likely to continue. Growth in Holden Beach should have little impact upon the Brunswick County School System. Table 6.1 shows the 2005-2006 school membership and the design capacity for the schools that Holden Beach residents attend. While growth in Holden Beach itself has probably had little direct impact upon the school system, the growth of the Shallotte Township as a whole has impacted the schools. The schools in the area are close to, or over, their intended design capacity. The Brunswick County School System is in the process of constructing a new K-8 facility on Stanley Road; this facility will likely be used by students from Holden Beach.

Section 7

Infrastructure Carrying Capacity

7.0 Introduction

Another important consideration in developing a land use plan for any barrier beach community is ensuring that the infrastructure's carrying capacity is adequate to serve the population and the influx of seasonal residents and visitors frequenting the Island. Approximately one-third of the buildable land within the Town of Holden Beach is vacant, thus, it is important to consider if existing infrastructure is adequate to handle projected population increases and the influx of seasonal residents and visitors. The following sections review important aspects of Holden Beach's infrastructure and some of the services provided by its Public Works Department. Section 9 contains the policies and recommended actions needed to ensure that the Town continues to have adequate infrastructure to serve its population.

7.1 Public and Private Water Supply Systems

At present, the Town of Holden Beach's municipal water system provides service to the entire island area. There are 2,368 connections to the municipal water system.

The Town of Holden Beach purchases water from Brunswick County to meet the needs of the population. There are multiple communities that rely on Brunswick County for their water supply; wholesale users of the Brunswick County water system are listed in Table 7.1. As growth in Brunswick County continues, the County has developed a water system master plan in an effort to ensure that the existing water supply will meet future demand needs. Brunswick County has anticipated that Holden Beach will require additional water in the future, at the rate sufficient to provide services for an additional 50 housing units per year. Based upon Brunswick County calculations [Table 7.1], Holden Beach will require 0.130 MGD on an average day in 2010, and 0.145 MGD on an average day in 2015. Additional wholesale users of the Brunswick County water supply system will increase from 4.692 MGD at present, to 7.379 MGD in 2010, and 8.714 MGD in 2015.

There are some issues associated with Brunswick County's calculation of Holden Beach's water supply needs. First, if growth occurs at a rate greater than 50 units/year, Brunswick County may be underestimating Holden Beach's future water supply needs. Second, Brunswick County has assumed that Holden Beach's total current average day demand is

Table 7.1 : Summary of Brunswick County Wholesale User Demand

Wholesale User	Anticipated Development Housing Units	Total Current Avg. Day Demand (MGD)	Year 2010 Avg. Day Demand (MGD)	Year 2015 Avg. Day Demand (MGD)
Bald Head Island	50/year	0.190	0.215	0.240
Boiling Spring Lakes	5-8% /year	0.144	0.359	0.500
Caswell Beach	60 units	0.148	0.164	0.187
Holden Beach	50/year	0.117	0.130	.0145
North Brunswick SD	1000/year	1.203	2.903	3.103
Northwest City	Sandy Cr + 330 homes	0.058	0.090	0.180
Oak Island	4% growth/year	0.990	1.188	1.387

0.117 MGD. In the Holden Beach Water Supply Report to the Division of Water Resources, dated July 31, 2003, the average annual daily water use for 2002 was reported at 0.329 MGD. Brunswick County water is supplied by the Cape Fear River (above lock and dam #1), and groundwater from the Castle Hayne aquifer. The Northwest Water Treatment Plant in Leland treats the water from the Cape Fear Fiver, and is capable of treating 24 million gallons per day. The second water treatment plant is the 211 Water Treatment Plant (capable of seven million gallons per day), located in Southport. This treatment plant treats groundwater from 15 different wells that pull from the Castle Hayne Aquifer, approximately 175 feet below the ground surface.

Water comes across the Intercoastal Waterway to the island at two separate locations: under the Holden Beach Bridge, and at Seagull Drive. There are approximately 20 miles of water distribution system lines within the municipal boundary. A 300,000 gallon storage tank is located on the island, and it stores water for usage by those within the Town. Hydrants within the Town system are flushed on a monthly basis; a valve exercise program is in place for the system and valves are exercised annually. Antennae for cell phone towers are located on top of the Town's storage tank; these antennae provide an additional source of rental income for the Town.

2020	295.285	0.809
2030	331.785	0.909
2040	368.650	1.010
2050	379.235	1.039

Source: Holden Beach Surface Water Supply Plan

It should also be noted that the Town of Holden Beach's water supply system is aging. The Town will need to prepare financially for the replacement of the existing water supply system infrastructure.

Water supply plans are useful because they analyze water use and project future demand. The last local water supply plan prepared for the Town of Holden Beach was submitted to DENR on July 31, 2003. This plan reports on municipal water services for 2002. The total water use reported for 2002 was 120.115 million gallons (MG). The average daily water use in 2002 was 0.329 MG. Monthly water usage reporting forms for 2005 were also reviewed to look at recent water usage history. Based upon the 2005 data, the largest average daily use was in July at 0.869 million gallons per day (MGD) and the maximum daily use in Holden Beach was in May, at 1.192 MGD [Table 7.3]. In a resort community such as Holden Beach, the system flows are subject to unusual peaks that occur seasonally. Therefore, while it is not necessary or practical to meet the State criteria on peak days, the system must be able to handle those flows for short periods without running out of water. To accommodate these periods, good engineering practice dictates that the well field should be able to meet peak daily flow in 24 hours pumping time with the largest well out of service.

As demonstrated by Table 7.4, the water supply system is more than capable of meeting projected service area demand based on current population projections. The biggest long-term issue is whether the population growth in Brunswick County and its use of the same aquifer system could ultimately impact Holden Beach's water supply.

7.2 Public and Private Wastewater Systems

The Town of Holden Beach has recently installed a municipal sewer system; this system became operable in May 2006. Connection to the public sewer system is required for all residents and businesses within the Town by May 31, 2007. Given that the sewer system for the Town of Holden Beach is new, it is expected that the sewer system has adequate capacity to serve expected growth over the next ten to 15 years. The Town's sewer system is displayed graphically on the Community Facilities (Sewer System) Map located in Appendix A.

7.3 Stormwater System

Two types of stormwater systems exist within the Town of Holden Beach; systems owned and operated by the Department of Transportation (DOT), and private systems. The DOT has some catch basins into french drains, and along the Causeway the DOT uses a curb and gutter system. New developments within the Town are required to install a stormwater system by use of swales or catch basins into an underdrain system.

7.4 Solid Waste Disposal and Recycling

The Town of Holden Beach makes every feasible effort to minimize the generation of waste and to recycle waste for which viable markets exist and to use recycled materials where feasible. The Town contracts with Waste Industries for solid waste disposal. The Town also contracts with Waste Industries for additional curb side pick-ups and beach strand pick-ups. A recycling center is located across from Town Hall on Rothschild Street; this center is operated by Brunswick County.

Curb side pick-up occurs on Tuesday and Saturday during June, July, August and September; and on Tuesdays only October through May. This modified collection schedule seeks to serve the peak seasonal population.

All Construction and Demolition (C&D) materials and yard debris is taken to Brunswick County Landfill, near Supply, N.C., for disposal. The solid waste debris is taken to a landfill in Sampson County for disposal. County facilities are adequate to meet current and future needs under the current waste disposal scenario. It should be noted that sufficient solid waste disposal facilities are not available within the County limits; however, this is a factor which Ocean Isle Beach has little control over.

7.5 Parking Facilities

With increasing numbers of visitors, there is a high demand for public parking spaces during summer months. However, according to Table 7.6 the number of marked spaces available for parking in public parking lots has increased from 194 spaces in 1995, to 202 spaces in 2000, to 224 spaces in 2005. These figures do not include the public parking available on side streets. These figures are unknown at the present time.

Table 7.6: Marked Parking Spaces

Location	1995	2000	2005
Non-metered public parking spaces*	194	202	224
Metered parking spaces	0	0	0
Total Marked Parking	194	202	224

Source: Holden Beach Public Works Department

*These figures do not include the number of spaces available on side streets. These figures are not known at present

Table 7.7: Level of Service Capacity (2005)

	2005 AADT	Level of Service "D"	Percent Usage
NC 130 between SR 1120 & the ICWW	7,400	12,500	59.2
SR 1116 between NC 130 & west end of island	4,200	11,500	36.5
SR 1116 between NC 130 & east end of island	2,700	11,500	23.5

Source : NCDOT Traffic Survey Unit

7.6 Transportation System

The Holden Beach Bridge is the only means of ingress or egress to the Town of Holden Beach from the Mainland. Accordingly, traffic at the bridge during summer months is common as is traffic congestion at major intersections on and adjacent to the Island. The road system is displayed graphically on the Transportation Systems and Public Access Facilities Map located in Appendix A. The Holden Beach Bridge and Roadway design capacity are discussed in the following sections.

7.6.A Holden Beach Bridge

The Holden Beach Bridge is the one point of entry and exit for the island; this bridge is maintained by the NCDOT. Based upon information provided by the DOT Bridge Maintenance Unit, the Holden Beach Bridge was constructed of pre-stressed concrete in 1985. The Holden Beach Bridge was designed for seven percent of traffic to be trucks, and for 40 mph speeds. The 1985 average daily traffic (AADT) for the Holden Beach Bridge was 2000 vehicles. The design year AADT (which was set at 2005) was estimated in 1985 at 3,300 vehicles. Based upon the AADT that was measured just a few miles north of the bridge (at PTC Station 900031), the 2004 AADT was 10,000. It seems that the bridge

designer had underestimated the amount of traffic that the Holden Beach Bridge would receive. Although the design year AADT is set at a point 20 years from the date when the bridge was constructed, the design life for the bridge project is typically 50 years or more, depending upon budget constraints.

The DOT Bridge Maintenance Unit inspects the bridge every two years; the most recent inspection was conducted on February 20, 2006. Currently there are no scheduled bridge repairs or improvements.

7.6.B Traffic Counts and Roadway Design Capacity

Like other facilities, roads are in highest demand during the summer months. Table 7.7 shows the 2005 average daily traffic (AADT) as compared to the Level of Service “D”, which the DOT considers the threshold for congestion. According to DOT, the Level of Service “D” borders on unstable flow. Density at Level “D” begins to deteriorate somewhat more quickly with increasing flow. Small increases in flow at this Level can cause substantial deterioration in service. Freedom to maneuver is severely limited, and minor incidents can cause substantial queuing. At the limit of Level of Service “D”, vehicles are spaced at about 165 ft., or nine car lengths.

As indicated in Table 7.7, the AADT numbers for 2005 are substantially lower than the Level of Service “D” for the measured roads on Holden Beach, and none of the island roads are currently experiencing capacity deficiencies when compared to average annual traffic. If the land use in these areas doesn’t change dramatically to accommodate large multi-dwelling unit buildings, i.e. high rise condominiums, then we should not predict major capacity deficiencies in the near future. It should be noted that the AADT reflect an *average* traffic count for the measured point; this traffic count could be substantially higher during the summer months. It also should be noted that as the population of Brunswick County continues to grow, additional capacity deficiencies may occur in the future. Traffic congestion during certain peak periods will most likely continue to occur, particularly during the summer months. The periodic congestion is likely to remain a fact of life for residents and visitors because there are no easy or inexpensive solutions to the problem given inherent limitations associated with the bridge. Nevertheless, further study of roadway, traffic, and parking issues is warranted.

Section 8

Land Suitability Analysis

8.0 Introduction

One of the DCM requirements (NCAC 15A 7B. 0702 (5)) and its newly promulgated *Technical Manual for Land Use Planning* is to perform a land suitability analysis (LSA) using data disseminated by state agencies, Brunswick County, and information from Holden Beach's GIS. The overall purpose of the analysis is to provide the Land Use Plan Steering Committee (LUPSC) with information on the best and least suited areas for development in order to guide the formation of policies and recommendations for managing future growth and development contained in the next section of this plan. The analysis applies to undeveloped land subject to future development or redevelopment.

8.1 Land Suitability Analysis

The LSA uses GIS applications and data from state and local sources to classify undeveloped land with a rating based on its suitability for development. The computer model divides the planning jurisdiction into one-acre grid cells. Each grid cell is measured for suitability based on the totality of factors affecting the cell. Many factors on or adjacent to undeveloped land affect the degree to which it is suitable for development. For example, whether the site has access to water and sewer infrastructure (positive factor), or has coastal wetland located on the parcel (negative factor). Final ratings fall into one of four categories: least suitable for development; low suitability; medium suitability, and highly suited for development.

The first step of the analysis was to complete the mapping of the factors used in the LSA to display their extent and applicability within the jurisdiction. These factors are identified on various maps located in Appendix A. The next step is mandated by the state. The CRC and the DCM defined criteria in which the presence or proximity of a prescribed set of factors are determined to impact the suitability of land for development, and automatically assigned a suitability ranking to factors based on the following criteria. Areas within:

- *Beneficial Non-Coastal Wetlands* have low suitability;
- *Storm Surge Areas* have low suitability;
- *100-year Flood Zones* have low suitability;
- *HQW/ORW Watersheds* have low suitability;
- 500 feet of a *Significant Natural Heritage Areas* has low suitability;

- A half-mile of **Primary Roads** has high suitability, within a half-mile to a mile have medium suitability, and areas greater than a mile outside of primary roads have low suitability;
- A half mile of **Developed Land** has high suitability, areas within a half-mile to a mile have medium suitability, and areas greater than one mile away from developed land have low suitability;
- A quarter-mile of **Water Pipes** has high suitability, areas within a quarter mile to half-mile of water pipes have medium suitability, and areas greater than a half-mile from water pipes have low suitability;
- A quarter-mile of **Sewer Pipes** has high suitability, areas within a quarter-mile to a half-mile have medium suitability, areas greater than a half-mile from water pipes have low suitability;
- **Coastal Wetlands** are *least* suitable;
- **Exceptional and Substantial Non-Coastal Wetlands** are *least* suitable;
- **Protected Lands** are *least* suitable; and,
- **Estuaries Waters** are *least* suitable.

For example, one criteria states that land within 500 feet of a wastewater treatment plant should receive a ‘low’ suitability ranking, while land within a half mile or less of water infrastructure is ‘highly’ suited for development. The overall suitability rating score for each acre of undeveloped land will be the composite of the suitability ratings for each factor. In a sense, it is an *average* of all of the individual ratings.

The Town of Holden Beach and its LUPSC also have an opportunity to provide input to the land suitability analysis by providing an importance weighting, or ranking, for each factor. Although the CRC and DCM decided on criteria that establish the suitability levels for each factor, the Town is allowed to decide on the relative importance of each factor in the overall analysis. This is done by ranking the factors as follows: 1 for important (lowest); 2 for very important; and 3 for highest importance (highest). The LUPSC followed the State’s recommended guidelines with respect to the rankings.

8.2 Implications of the Land Suitability Analysis

The results of the Land Suitability Analysis are displayed graphically in Appendix C. Unfortunately, the results of the land suitability analysis have little practical affect for the Town and the LUPSC as it formulates policies and recommendations for future development. The results of the land suitability analysis are best used for evaluating sizable tracts of undeveloped land in larger municipalities or at the county level. The LSA also has problems when applied to long, thin barrier beach municipalities such as Holden Beach due to the scale and dynamic nature of the data used. Although the Town of Holden Beach may still undergo significant development, only 28 percent of the island lots remain vacant. Accordingly, the results of the analysis will most likely have limited applicability with respect to guiding future development decisions. Nevertheless, the Land Suitability Analysis Map found in Appendix C is a useful planning tool that provides some indication of the areas within town limits that are best suited for land development.

Section 9

Plan for the Future

9.0 Introduction

The policies and recommended actions described in this section of the land use plan address the issues raised in the previous sections of this plan as well as the issues identified at a Public Workshop held June 22, 2006. The policies and recommended actions also reflect issues identified during the steering committee meetings that led to the preparation of the *Phase I Report on Land Use and Future Development: Final Report*, which was approved by the Board of Commissioners on May 8, 2007.

When the steering committee turned its attention to preparing policies for the revised land use plan in January 2007, the policies from the 1997 Land Use Plan were used as a starting point for discussions. In most cases, the policies described in the following sections extend or refine policies from the 1997 Land Use Plan. In other cases, the policies and recommendations address issues that arose since the adoption of the 1997 Land Use Plan. The steering committee also made an attempt to incorporate policies from other recent plans into this document. Finally, some policies and recommended actions were included to address requirements contained in the revised guidance developed by North Carolina's Division of Coastal Management (DCM) developed pursuant to the Coastal Area Management Act (CAMA). A public workshop on the draft policies was held on May 22, 2007 to get public input on the proposed policies and recommended actions. The policies and recommended actions were then modified as necessary by the Land Use Plan Steering Committee based on the input at the public workshop. The end result of this process was the following set of goals, objectives, policies, and recommended actions. An asterisk (*) indicates that the policy or recommended action exceeds minimum DCM LUP guidelines.

9.1 Land Use and Development

Goal 9.1: Adopt and apply local policies that balance protection of the natural resources and fragile areas with economic development.

Objective 9.1.A: Manage growth and development while protecting the environment to ensure that the Town remains an inclusive, wholesome family community that maintains its residential character, natural resources, and its recreational amenities.

Policy 9.1.A.1: New Development: All new development and redevelopment will adhere to the Town’s building and development regulations and to the density requirements set forth in the Zoning Ordinance.

Policy 9.1.A.2: Height Limits: The Town shall limit building height to 35 feet.

Policy 9.1.A.3: Aesthetics: The Town will work with developers to ensure that development is done in a manner that is consistent with existing aesthetic and architectural characteristics.

Policy 9.1.A.4: Commercial Development: The Town does not support increasing the size of the commercial zone and will limit new commercial development to the existing commercial zone. The Town supports the location of tourism related establishments in commercial zones such as restaurants and retail shops.

Policy 9.1.A.5: Beach Clubhouses: Beach clubhouses that provide services to visitors shall only be permitted in existing commercial zones. They are prohibited in all other areas.

Policy 9.1.A.6: Mixed Use: The Town supports the concept of appropriately sized proposals for mixed use development in existing commercial zones in order to revitalize these areas and preserve the economic viability of existing commercial property on the Island. The height of mixed use projects is limited to 35 feet.

Recommended Action 9.1.A.6.a: The Town shall review its ordinances and determine whether changes are needed to facilitate proposals for mixed use development projects in commercial zones.

Policy 9.1.A.7: Development Impacts on Conservation Zones: New development and redevelopment shall not be permitted which would act to degrade the quality of natural and scenic resources at Holden Beach. The Town will enforce state and local regulations involving development in or adjacent to conservation zones.

Recommended Action 9.1.A.7.a: The Town shall work with other public and nongovernmental organizations (e.g., Nature Conservancy) to preserve existing green space and acquire or otherwise protect conservation areas, and other sensitive natural areas to ensure their long-term protection.

Recommended Action 9.1.A.7.b: The Town shall work with willing land owners and encourage them to gift lands to the Town that can be used for public access, recreation, or conservation purposes.

Policy 9.1.A.8: Development of Sound and Estuarine Areas: All estuarine islands and spoil islands are subject to the conservation (C district) provisions of the Town’s zoning ordinance.

Policy 9.1.A.9: Industrial Impacts: The Town will prohibit any form of industry other than those associated with tourism.

Policy 9.1.A.10: Marinas: The Town will prohibit the development of new marinas on the island. The Town will not allow upland excavation for marina basins.

Policy 9.1.A.11: Dry Stack Storage: The Town will not approve the dry stack storage of boats on the Island.

Policy 9.1.A.12: Tourism: The Town will support and promote tourism as an essential economic activity having direct positive impact of future development.

Recommended Action 9.1.A.12.a: The Town will take several steps to promote tourism including:

- Supporting local Chambers of Commerce;
- Use a portion of the occupancy tax revenue to support the efforts of the Tourism Development Authority (TDA) to grow the tourism market; and,
- Supporting advertising campaigns designed to attract visitors.

Policy 9.1.A.13: Future Development on the Mainland: The Town shall work with the County and other local jurisdictions to minimize the density of development in inland areas along the ICWW, tributaries that drain to the ICWW, and the road corridors that lead to the bridge to Holden Beach.

Recommended Action 9.1.A.13.a: The Town should form an ad hoc committee to explore whether the establishment of an extraterritorial jurisdiction could improve the Town’s ability to limit the density of development along the ICWW and the road corridors leading to the Island. The committee will also educate the public about the consequences of an ETJ and the fact that residents in these areas do not get to vote and that there is no obligation to ever annex these properties. The purpose of establishing the ETJ would solely be for limiting the development likely to occur on the mainland adjacent to Holden Beach.

Policy 9.1.A.14: Public Participation: The Town will assure that all segments of the population in the planning area are informed about land use decisions and have an opportunity to participate in planning and decision making processes.

Recommended Action 9.1.A.14.a: The Town will continue to utilize standing committees and boards to involve the public in planning decisions whenever practicable.

Recommended Action 9.1.A.14.b: The Town will continue to utilize the Town's website, cable access channel, and other methods to keep citizens informed of planning and land use decisions whenever practicable.

Policy 9.1.A.15: Commitment to State and Federal Programs: The Town supports state and federal programs such as CAMA, beach nourishment, erosion control, public access, highway improvements, dredging (channel maintenance and beach nourishment), and other similar programs provided the Town finds these programs to be appropriate and consistent with Town Policies.

Policy 9.1.A.16: Policy Review: The Town will routinely review the policy and implementation section of this Land Use Plan to determine whether changes to the policies and recommended actions are needed.

9.2 Infrastructure Carrying Capacity

Goal 9.2: To ensure that public infrastructure systems are appropriately sized, located, and managed to serve the Town's population while ensuring the quality and productivity of the AEC's and other fragile areas are protected and restored.

Objective 9.2.A: Ensure that the location and capacity of public infrastructure is consistent with the Town's growth and development goals.

Policy 9.1.A.1: Provision of Town Services: The Town will continue to provide a range of services to residents within the incorporated areas within the Town. Connection to water and sewer lines will be at the expense of the developer. If water or sewer facility upgrades or expansions are required for new development, the needed improvements would be at the expense of the developer.

Recommended Action: 9.1.A.1: The Town will complete the planned renovations to its Town Hall facilities in order to provide additional space for its departments to provide services to the growing year round and seasonal population on the Island.

Policy 9.2.A.2: Operation of Water Facilities: The Town shall ensure efficient, uninterrupted operation of water facilities for Town residents.

Recommended Action 9.2.A.2.a: The Town shall begin planning for the replacement of aging water lines and investigate whether other improvements in its water supply system are needed to serve a growing seasonal population.

Recommended Action 9.2.A.2.b: The Town will continue to explore the feasibility of potentially transferring the town-owned water distribution system to Brunswick County but will only do so when it results if it will improve service delivery for Town residents.

Recommended Action 9.2.A.2.c: The Town will continue to encourage homeowners to adopt practices that lead to water conservation.

Policy 9.2.A.3: Operation of Wastewater Facilities: The Town shall ensure efficient, uninterrupted operation of wastewater facilities for Town residents.

Recommended Action 9.2.A.3.a: The Town shall maintain an ordinance that requires all new development and redevelopment as well as existing development to tie into the central sewer system.

Recommended Action 9.2.A.3.b: Town officials should encourage the County to provide additional sewage treatment to residents outside of town boundaries.

Policy 9.2.A.4: Potable Water Supply: The Town supports and encourages the protection of the potable water supply well sites and river in-flow area in the planning area and in adjacent areas within Brunswick County.

Policy 9.2.A.5: Soils and Septic Tank Suitability: Growth and development requiring septic systems will not be permitted in unincorporated areas along the ICWW or along the road corridors leading to Holden Beach where septic tanks will not function. All septic tanks must be in compliance with State Health Regulations as administered by the Brunswick County Health Department. The Town will provide wastewater treatment services only to incorporated areas within the Town.

Policy 9.2.A.6: Bridge & Road Improvements: The Town supports State and Federal bridge and road improvement programs and efforts to reduce traffic congestion on the Island and along the road corridors leading to the bridge.

Recommended Action 9.2.A.6.a: Town officials will continue to work with NCDOT to help improve traffic conditions both on the island and in surrounding areas as a result of a growing seasonal population, and growing population on the mainland in areas near Holden Beach.

Recommended Action 9.2.A.6.b: Town officials will work with developers to incorporate transportation improvements into new commercial and residential development projects when applicable.

Policy 9.2.A.7: Maintaining Adequate Fire Protection: The Town will provide support to police and volunteer fire services as needed to keep pace with the demands of the growing seasonal population.

Policy 9.2.A.8: Bicycles: The Town supports the use of bicycles and street legal golf carts as a functional means of reducing automobile traffic and parking demands at the beach.

Policy 9.2.A.9: Rezoning Analysis: The Town shall conduct an analysis of infrastructure before rezoning parcels to allow for more intensive development or changing development standards to allow for higher densities and intensities. This analysis shall determine if existing infrastructure can provide adequate service to the Town as a whole in light of the proposed re-zonings or development standard changes. The infrastructure analysis shall review road capacity, water and sewer capacity, fire flow capacity, public access and other infrastructure demands related to future development.

9.3 Public Access and Recreation

Goal 9.3: Maximize public access to the beaches and public trust waters of the Town of Holden Beach and maximize recreational opportunities for residents and visitors.

Objective 9.3.A: Access for All Segments of the Community: Implement policies and recommendations that assure satisfactory access to all segments of the community including persons with disabilities and provide recreational opportunities for residents and visitors alike.

Policy 9.3.A.1: Existing Access Facilities: The Town supports public access to the oceanfront and other waterways and will maintain and improve existing public access facilities. Where possible, the Town should seek funding from federal, state, and county sources to fund these improvements.

Recommended Action 9.3.A.1.a: The Town shall continue to identify ways to improve existing access sites and improve handicapped access.

Policy 9.3.A.2: Expand Public Access Facilities: The Town will continue to work towards expanding public access to the ocean and ICWW and seek federal, state, or county funds to develop new public access and recreation facilities.

Recommended Action 9.3.A.2.a: The following are considered to be priorities for new public access facilities:

- Identify suitable locations along the ICWW for public access facilities and pocket parks. Possibilities include the ends of Ferry Road, Sandspur Street, Sand Dollar Street, Swordfish Street, and Sailfish Street.
- Identify locations along the beachfront where landowners may be willing to let the Town assume responsibility for maintaining an access site and develop these sites for use by the public.
- Explore the feasibility of using the Island near the 800 block parking lot owned by the Town as a passive recreation facility with environmental education trails.

Policy 9.3.A.3: Signage: The Town shall improve the signage of existing public access sites located along the sound.

Policy 9.3.A.4: Public Acquisition of Hazardous Areas: The Town should consider purchasing parcels located in hazard areas or rendered unbuildable by storms or other events, for the purpose of public water access and conservation of open space if funding, including State or federal funding, is available.

Policy 9.3.A.5: Public Access Parking: The Town supports the development of additional parking for public access sites. The Town also supports the establishment of “No Parking” zones along the selected road right-of-way, and public frontal dune walkways and ramps at selected points along the beach front to improve pedestrian and bicycle safety.

Recommended Action Item 9.3.A.5.a: The Town supports the development of a privately operated off-island parking area to reduce vehicle traffic and congestion on the island.

Policy 9.3.A.6: Pedestrian and Bicycle Access: The Town encourages pedestrian and bicycle access along the Island to help alleviate traffic problems and improve public access to the shoreline.

Recommended Action 9.3.A.6.a: The Town will pursue federal and state grant opportunities to construct sidewalks, walkways, and bike lanes at strategic locations on the Island.

Policy 9.3.A.7: Supporting Federal and State Programs to Expand Access: The Town is committed to county, state, and federal programs that maximize public access to the beaches and public trust waters of the Town of Holden Beach. The programs include but are not limited to the Coastal Area Management Act, the North Carolina Public Beach Access Program, Federal channel maintenance and inlet projects and beach nourishment projects.

Objective 9.3.B: Reduce User Conflicts: The Town will manage conflicting uses of its beaches and public trust waters.

Policy 9.3.B.1: Dune Protection: Public pedestrian access is limited to designated dune crossover areas in order to minimize damage to dunes and vegetation. Walking on dunes or acting in any manner that causes damage to dunes and vegetation is against state and local ordinances. The Town, through its CAMA minor permit program, may allow the construction of private crossovers over the dune structures for access to the beach at private access points.

Policy 9.4.B.2: Off-Road Vehicles: The Town will not allow off-road vehicles on the dunes or on the shoreline area, with the exception of public service or emergency vehicles and inherited commercial fishing right access.

Policy 9.3.B.3: Floating Homes: The Town will not approve floating home development on the Island.

Policy 9.3.B.4: Moorings: Commercial seafood vessel dockage along the ICWW is deemed acceptable. All moorings in that regard must conform to CAMA and State regulations.

Policy 9.3.B.5: Maintenance of Navigation Channels: Holden Beach supports the proper maintenance of channels, particularly the ICWW due to the impact of this channel on commercial and recreational fisheries and general boating.

Policy 9.3.B.6: Blocking or Impairing Navigational Channels: Projects that would directly or indirectly block or impair existing navigational channels shall be prohibited. This includes but is not limited to projects that deposit spoils below mean high water, extend piers beyond the established pier head line or any projects determined to be detrimental to navigation of the public trust waters.

Policy 9.3.B.7: Dredging to Support Commercial and Sport Fishing Facilities: In order to expand Holden Beach's sport and commercial fishing, the Town will permit private and public dredging activities which will positively affect those industries when all federal, State, and local permits are obtained.

Policy 9.3.B.8: Safe Boating: The Town shall seek to increase public awareness of safe boating rules.

Policy 9.3.B.9: Operation of Jet Skis and Personal Watercraft: The Town shall seek to ensure the responsible use of Jet Ski's and other similar personal watercraft in the public trust waters of Holden Beach.

9.4 Water Quality and Natural Environment

Goal 9.4: Maintain and where possible improve the natural environment and water quality within and adjacent to Holden Beach.

Objective 9.4.A: Protect the Natural Environment: The Town shall take actions designed to protect and where possible enhance and restore the sensitive natural resources located in and adjacent to the Town of Holden Beach.

Policy 9.4.A.1: Areas of Environmental Concern. The Town will support and enforce through its CAMA Minor Permitting capacity, the State policies and permitted uses in AECs. Acceptable uses within the individual AECs of the estuarine system shall be those requiring water access or those that cannot function elsewhere. Such uses shall be consistent with the general use standards for coastal wetlands, estuarine waters, and public trust areas stated in 15NCAC subchapter 7H.

Policy 9.4.A.2: Coastal Wetlands: Acceptable land uses in Coastal Wetlands may include utility easements, fishing piers, and docks. Examples of uses not permitted include restaurants, businesses, residences, apartments, motels, hotels, parking lots, private roads, and highways.

Policy 9.4.A.3: Estuarine Shorelines: Residential, recreational, research, educational, and commercial land uses are all appropriate types of use along the estuarine shoreline provided all standards of 15NCAC Subchapter 7H relevant to estuarine shoreline AECs are met, and the proposed use is consistent with the policies set forth in this plan.

Policy 9.4.A.4: Ocean Hazard Areas The Town supports State policies for ocean hazard areas as set forth in Chapter 15NCAC subchapter 7H of the State CAMA regulations. Suitable land uses in ocean hazard areas include ocean shoreline erosion control activities, dune establishment and stabilization. Residential, commercial and recreational land uses and parking lots for beach access are also acceptable uses in ocean hazard areas provided they meet all general and specific standards of 15NCAC: 7H.

Policy 9.4.A.5: Appropriate Land Use in Areas of Environmental Concern: The Town will conserve and manage estuarine waters, coastal wetlands, public trust areas, and shorelines, as an interrelated group of AECs, so as to safeguard and perpetuate their biological, social, economic, and aesthetic values and to ensure that development occurring within the AECs is compatible with natural characteristics so as to minimize the likelihood of significant loss of private property and public resources.

Policy 9.4.A.6: Development in Environmentally Fragile Areas: The Town will properly and effectively manage development inside or adjacent to freshwater and coastal wetlands, hazardous areas, and other environmentally fragile areas to minimize their impact in accordance with all applicable federal, state, and local regulations.

Policy 9.4.A.7: Development of Sound and Estuarine System Islands: After carefully and thoroughly reviewing proposals for development on estuarine and spoil “islands”, the Town will allow residential development only, and only if consistent with the Town’s Zoning Ordinance and Subdivision Regulations. The development of these areas will be given preliminary approval by the Town and property owners must obtain all State and federal permits before seeking final review and approval for development by the Town.

Policy 9.4.A.8: Prime Wildlife Habitats: The Town will continue to protect its prime wildlife habitats by enforcing the CAMA major and minor permitting program.

Policy 9.4.A.9: Turtle Nesting Areas: The Town shall work to protect habitat areas used for turtle nesting.

Policy 9.4.A.10: Damage to Existing Marshes by Bulkhead Installation: Maintenance and replacement of existing bulkheads will be permitted provided that it meets the requirements of the COE and CAMA.

Policy 9.4.A.11: Permanent Erosion Control Structures on Ocean Shorelines: Oceanfront bulkheads, groins, seawalls or other shoreline hardening erosion control structures are not permitted by the State of North Carolina and will not be allowed on Holden Beach. However, if allowed by the State of North Carolina, the Town may consider other innovative methods of shoreline stabilization, particularly in inlet hazard areas, provided the property owner can demonstrate the potential value of the device and provide evidence that the installation of these innovative methods will not cause erosion to adjoining property owners.

Recommended Action 9.4.A.11.a: The Town recommends that the CRC reconsider its ban on permanent erosion control structures in Inlet Hazard Areas to better protect public infrastructure, private property, and public safety. The CRC should modify its policies to make allowances for alternative stabilization methods in inlet hazard areas to avoid the repeated public expenditures and environmental disturbances associated beach nourishment, the only alternative erosion control measure permitted pursuant to CAMA regulations.

Policy 9.4.A.12: Use of Package Treatment Plants: Package treatment plants are not permitted in the incorporated area. In unincorporated areas along the ICWW and waterways that drain to coastal waterways, State-approved alternative systems are discouraged by the Town.

Policy 9.4.A.: Dredging: The Town seeks to control dredging so it does not directly or indirectly increase beach or waterway erosion on the island. In all dredging cases, spoil resulting should be located on the island so as to mitigate the effects of past erosion or to prevent additional erosion.

Policy 9.4.A.: Solid Waste Disposal & Recycling: The Town supports measures to recycle and reduce the amount of soil waste generated by residents, visitors, and businesses on the Island.

Objective 9.4.B: Support Commercial and Recreational Fisheries: The Town will work toward the protection and enhancement of North Carolina's sport and commercial fisheries industries.

Policy 9.4.B.1: Commercial and Recreational Fisheries Development: Development or any activity which will adversely affect coastal and estuarine waters will be prohibited. Those structures which support commercial and recreational fisheries will be allowed to be placed adjacent to coastal and estuarine waters if all required permits are obtained. In the design, construction and operation of water dependent structures, efforts will be made to mitigate negative effects on water quality and fish habitat, as determined by 15A NCAC 7H, Resources Commission. The developer and/or owner will bear the cost of any such mitigation.

Policy 9.4.B.2: Commercial and Residential Fisheries: The Town supports federal and state projects which increase the productivity of coastal and estuarine waters. Projects such as dredging to increase flushing along tidal waters, oyster reseeded programs, and properly constructed artificial reefs will be supported.

Policy 9.4.B.3: Shellfishing Waters: The Town supports and promotes the activities of the State's Shellfish Management Program. The Town promotes improvements in estuarine water quality through its sewer system, implementation of its stormwater management ordinance, and through CAMA's permitting regulations.

Policy 9.4.B.4: Restrictions on Menhaden Fishing: The Town supports the efforts of many coastal communities to restrict operation of Menhaden fishing activities to an area outside one nautical mile of the Holden Beach coastline and to ban gill net fishing throughout the year.

Policy 9.4.B.5: Support for N.C. Division of Marine Fisheries: The Town supports the N.C. Division of Marine Fisheries' efforts to develop regulations and policies that help protect ocean and estuarine water quality.

Objective 9.4.C: Improving Water Quality: Reduce pollutant loadings in stormwater generated within the Town of Holden Beach.

Policy 9.4.C.1: Sewage Treatment: The Town will continue to improve its wastewater treatment within the incorporated area as a means of protecting and improving surface water quality.

Policy 9.4.C.2: Surface Water Quality: The Town shall continue to seek improved stormwater runoff and take actions that protect and enhance the water quality of the estuarine and ocean system.

Recommended Action 9.4.C.2.a: The Town will work to implement the Lockwood Folly Roundtable Strategies identified by Brunswick County in partnership with the North Carolina Coastal Federation and North Carolina Ecosystem Enhancement Program.

Policy 9.4.C.3: Stormwater Management: The Town will continue to implement its stormwater management ordinance to ensure that all new commercial and residential development treats stormwater onsite using appropriate BMPs.

Policy 9.4.C.4: Reduction of Existing Stormwater Discharges: The Town shall continue to utilize structural and non-structural BMPs designed to reduce the quantity and increase the quality of existing stormwater discharges.

Recommended Action 9.4.C.4.a: When state roads are repaired or resurfaced, the Town shall require the Department of Transportation (DOT) to use infiltration systems and other structural or nonstructural BMPs necessary to treat stormwater generated from road surfaces. When town roads are repaired or resurfaced, the Town shall seek state funding to assist with its efforts to treat stormwater generated by road surfaces using infiltration devices and other structural and nonstructural BMPs.

Recommended Action 9.4.C.4.b: The town shall continue its efforts to educate homeowners about actions they can take to reduce stormwater runoff from their property.

Policy 9.4.C.5: Stormwater Retrofits for Existing Development: Where appropriate, the Town shall use economic incentives to encourage existing residential and commercial development to retrofit properties and install structural or nonstructural BMPs that reduce stormwater runoff.

Policy 9.4.C.6: Stormwater Discharges From Municipal Sources: Where practicable, the Town shall eliminate stormwater discharges resulting from municipal activities. Where elimination is not possible, the Town shall mitigate the sources of stormwater discharges to the maximum extent practicable.

Recommended Action 9.4.C.7: The staff of the Public Works Department shall expand its efforts to identify and eliminate stormwater discharges resulting from the Town's municipal activities.

9.5 Hazard Mitigation

Goal 9.5: Protect public health and safety from the damaging effects of storm surges, wave action, flooding, high winds, and erosion associated with hurricanes, severe weather, and other hazards.

Objective 9.5.A: Protect Against Damage from Hurricanes, Severe Weather or Other Hazards: The Town will be proactive in its efforts to minimize damage and threats to public health and safety associated with hurricanes, severe weather, and other hazards and work to implement the *Holden Beach Hazard Mitigation Plan*.

Policy 9.5.A.1: Development in Hazardous Areas: The Town shall use a variety of methods, including CAMA setback requirements and the Flood Prevention Ordinance, to discourage high-density uses and large structures within the 100-year floodplain, erosion-prone areas, and other locations susceptible to hurricane and flooding hazards.

Policy 9.5.A.2: Flooding and Storm Surge: As a participant in the National Flood Insurance Program, the Town supports hazard mitigation and participates in the regular phase of the insurance program. The Town also supports continued enforcement of the CAMA and 404 wetlands development permit processes in areas potentially susceptible to flooding.

Policy 9.5.A.3: Flood Insurance: The Town shall take actions necessary to reduce the cost of flood insurance to property owners by maintaining or improving its status pursuant to the Community Rating System (CRS).

Recommended Action 9.5.A.3.a: In order to help lower the costs of flood insurance the Town should consider whether adding a freeboard requirement will help lower flood insurance costs for residents.

Policy 9.5.A.4: Wave Action and Shoreline Erosion: The Town supports the CAMA development permit process for estuarine shoreline areas and the requisite development standards which encourage both shoreline stabilization and facilitation of proper drainage.

Policy 9.5.A.5: High Winds: The Town supports enforcement of the N.C. State Building Code. The Town will continue to enforce the State Building Code on wind resistant construction with design standards of 135 mph wind loads.

Policy 9.5.A.6: Relocation of Structures: Structures may be moved off property subject to erosion and relocated elsewhere so long as that movement meets the requirements of town ordinances and building codes.

Policy 9.5.A.7: Lockwoods Folly Inlet: The Town strongly supports the efforts of the U.S. Army Corps of Engineers (COE) to stabilize the Lockwoods Folly Inlet, and to develop an engineering plan to nourish a large percentage of beach areas on the island.

Policy 9.5.A.8: Evacuation Plans: The Town will provide for an orderly and timely evacuation of Town property owners and visitors during a declared emergency by following established procedures set forth by the Holden Beach Evacuation Plan and by the Brunswick County Emergency Management Agency.

Recommended Action 9.5.A.8.a: The Town shall build an emergency operations center on land it owns on the mainland. The emergency operations center will be used in the event the Island has to be evacuated or the bridge is closed due to high winds.

Policy 9.5.A.9: Evacuation Shelters: Ensure that all evacuation shelters are well-publicized, accessible, and meet national standards for public safety and supplies.

Policy 9.5.A.10: Land Acquisition: The town supports the acquisition of property that is unsuitable for development due to coastal hazards when such acquisition serves a useful public purpose such as access to the beach or sound. Acquisition of appropriate properties is also encouraged by federal and state agencies.

Recommended Action 9.5.A.10.a: The Town shall investigate outside funding sources for land acquisition and shall encourage gifts and donations for tax credits as a mitigation measure for future storm events.

Policy 9.5.A.11: Minimize Potential Fire Damage: The Town will continue its efforts to reduce the risk of damage from urban fires as a result of future development.

Policy 9.5.A.12: Beach Nourishment: The Town supports all beach nourishment programs. Nourishment activities must be done in an environmentally sensitive fashion and with respect to impacts on surrounding properties.

Recommended Action 9.5.A.12.a: The Town should continue to work with the COE to obtain approval for a 50-year plan of work to stabilize shoreline and inlet areas through techniques such as periodic beach nourishment of eroded areas.

Recommended Action 9.5.A.12.b: The Town in cooperation with the County should develop a strategy for the Town to become financially self sufficient so that regular beach nourishment projects can still be funded in the event that federal and state funding for beach nourishment projects is reduced.

Policy 9.5.A.13: Bulldozing: The practice of bulldozing on the beach shall be discouraged in non-emergency situations.

Policy 9.5.A.14: Hurricane Preparedness Plan: The Town shall update its Hurricane Preparedness Plan on an annual basis each spring in concert with county and state emergency management officials, and with input from Town residents. The plan shall encompass pre-storm and immediate post storm activities and policies of the town. Issues addressed in the Hurricane Preparedness Plan should include:

- Criteria for issuing building permits in a post storm setting
- Orderly issuance of building permits in a post-storm setting
- Sequence of restoration for public utilities and services
- Public infrastructure repair and replacement
- Beach re-entry

- Debris pick-up
- Damage assessment
- Evacuation procedures
- Recovery Task Force membership and duties
- Public health and safety issues

Policy 9.5.A.15: Public Education: Ensure that the public is aware of the risks of different types of natural hazards in order to reduce their personal exposure to natural hazards.

Recommended Action 9.5.A.15.a: The Planning Department shall implement a public education program designed to help inform the public about their exposure to natural hazards and actions they can take to mitigate potential damage to public health, safety, and property from natural disasters. This includes, but is not limited to:

- Ensure local libraries maintain documents about flood insurance, flood protection, floodplain management, and natural and beneficial functions of floodplains. Many documents are available free of charge from the Federal Emergency Management Agency (FEMA);
- Encourage builders, developers and architects to become familiar with the NFIP's land use and building standards by attending annual workshops presented by the NC Division of Emergency Management (DEM);
- Provide local real estate agents with handouts advising potential buyers to investigate potential flood hazards for the property they are considering purchasing;
- Advertise the availability of flood insurance on an annual basis; and,
- Post hazard related information on the Town's website and distribute appropriate educational materials.

Objective 9.5.B: Post-Storm Recovery: In the period following a hurricane, severe weather event, or other disaster, the Town will work as quickly as possible to restore essential services related to public health, safety and welfare.

Policy 9.5.B.1: Post Disaster Recovery: The Town will follow the Hurricane Preparedness Plan for Holden Beach in coordination with the Brunswick County Emergency Services Agency.

Policy 9.5.B.2: Redevelopment of Developed Areas: Homes and other structures may be redeveloped (rebuilt) on the same property as a result of coastal storms or other reasons, so long as they are not damaged beyond 50% of their value. If damages exceed 50% of value, then redevelopment on the same property must meet town and state requirements pertaining to hazard setback. It is the Town's policy that density allowances for redevelopment areas conform to existing Town building and zoning requirements, the Future Land Use Map designations contained in Appendix D, and related provisions of the *Holden Beach Hazard Mitigation Plan*.

Policy 9.5.B.3: Removal of Damaged Structures: Homes damaged as a result of erosion or coastal storms may be considered a public nuisance and may be subject to removal at property owner expense.

Policy 9.5.B.4: Mutual Aid: The Town shall maintain established mutual aid agreements and where necessary develop new agreements to assist with post-storm event clean-up, damage assessment, and reconstruction activities.

Policy 9.5.B.5: Staging Schedule for Reconstruction and Repair: The staging schedule for the re-establishment of essential services and the reconstruction and repair of properties damaged in a storm event depends on the severity of the storm and the damage inflicted. The Town will work to restore essential services related to public health, safety and welfare first. Properties suffering minor damage will be issued permits as expeditiously as possible. Properties suffering major damage will generally be allowed to implement temporary protective measures designed to protect their property from further damage or to correct public safety problems.

Policy 9.5.B.6: Public Infrastructure Repair and Replacement: The Town shall maintain assessments of current infrastructure usage and need for expansion, repair, or replacement. Following major storm events, the Town will assess damage to public infrastructure at the earliest possible time. Damage that affects public health and safety will be corrected as soon as practicable. Damage to existing infrastructure will also be evaluated for potential opportunities for repair or expansion consistent with existing capital improvement and repair needs. Long term repair or replacement of infrastructure will be prioritized based on resources available, impact on the integrity of the infrastructure, mitigation of future hazard situations, the Town's capital improvement program, and its *Hazard Mitigation Plan*.

Policy 9.5.B.7: Electrical Outages: The Town shall work to reduce the frequency of electrical outages and length of time such outages last after hurricanes and severe storm events.

Policy 9.5.B.8: Post-Storm Hazard Mitigation: Develop specific and timely recommendations for implementing hazard mitigation measures contained in the *Holden Beach Hazard Mitigation Plan* following a state or federally declared natural disaster.

Recommended Action 9.5.B.8.a: In the event that the President declares Holden Beach a disaster area, the Planning Department shall apply for funding from the Hazard Mitigation Grant Program (HMGP) for one of the top priorities listed in the Town's *Hazard Mitigation Plan*.

9.6 Definitions of Terms Used in Policies and Recommendations

Create: Bring about the desired goal, usually with Town staff and planning board involved at all levels from planning to implementation. It may involve the Town's financial assistance.

Continue: Follow past and present procedures to maintain desired goal, usually with Town staff involved at all levels from planning to implementation.

Encourage: To stimulate or foster a particular condition through direct or indirect action, the private sector, or through Town regulation, staff recommendations and decisions.

Enhance: Improve existing conditions by increasing the quantity or quality of desired features or current regulations and decisions towards a desired state through the use of policies and Town staff at all levels of planning. This could include financial support.

Identify: Catalog and confirm resource or desired item(s) through the use of Town staff and actions.

Implement: Actions that lead to the accomplishment of the plan’s policies and recommended actions.

Maintain: Keep in an existing state or good condition the desired state of affairs through the use of Town policies, codes, boards, staff actions, and Town finances, if needed.

Prevent: Stop the described event through the use of appropriate Town policies, codes, boards, staff actions, and Town finances, if needed.

Promote: Advance the desired state through the use of Town policies, codes, boards, and staff actively involved in all aspects of planning. This may include financial support.

Protect: Guard against a deterioration of the desired state through the use of Town policies, regulations, staff, and if needed, financial assistance.

Provide: Take the lead role in supplying the needed financial and staff support to achieve the desired goal. The Town is typically involved in all aspects from planning to implementation to maintenance.

Shall: An officially adopted course or method of action that is construed to be mandatory. Exceptions should be rare.

Should: An officially adopted course or method of action intended to be followed in order to implement the plan’s goals and objectives. Though not as mandatory as “shall”, it is still an obligatory course of action unless clear reasons can be identified that an exception is warranted.

Strengthen: Improve and reinforce the desired goal through the use of Town policies, staff, and if necessary, financial assistance.

Sustain: Uphold the desired state through Town policies, decisions, financial resources, and staff action to achieve the desired goal.

Work: Cooperate and act in a manner through the use of Town staff, actions, and policies to create the desired goal.

Section 10

Tools for Managing Development

10.0 Introduction

This section of the land use plan describes Holden Beach's strategy and action plan for implementing the policies and recommendations contained in Section 9's Plan for the Future. This section has four major parts that describe the:

- ***Role of the land use plan in local decisions:*** the role of the plan and the status of its goals, objectives, policies, and recommended actions in Holden Beach's land use and development decisions;
- ***Existing development management program:*** Holden Beach's existing policies, ordinances, codes, and regulations and how they will be coordinated and employed to implement the plan's policies and recommended actions;
- ***Additional tools:*** the other tools such as new or amended ordinances, capital improvement programs, land acquisition, or other projects recommended to implement the plan; and,
- ***Action plan and implementation schedule:*** the priority policies and recommended actions that will be taken to implement the plan with a general schedule to accomplish these actions.

Collectively, these sections describe how Holden Beach's CAMA Land Use Plan will manage future land use and development.

10.1 Role of the Land Use Plan in Local Decisions

Holden Beach's CAMA Land Use Plan serves a variety of functions and the plan for the future contains a broad range of:

- ***Goals:*** Desired ends toward which policies and programs of the Land Use Plan are directed. Many of the goals reflect requirements set forth in the Division of Coastal Management's (DCM's) Coastal Resource Commission (CRC) guidelines;
- ***Objectives:*** More specific and measurable than the general goals and in some cases a goal has multiple objectives;

- **Policies:** A consistent set of principles or guidelines for making a variety of local decisions designed to accomplish the goals and objectives. These policies guide decisions by the Board of Commissioners, its appointed boards, and staff.
- **Recommended Actions:** Specific actions that can be taken to implement and advance the plan's policies. Many of these recommended actions are non-regulatory in nature and will be addressed through the Town's capital improvement program (CIP) or through subsequent planning efforts.

Collectively, the goals, objectives, policies, and recommended actions provide a long range planning function but they also help guide day to day operations. The daily functions relate primarily to the decisions and actions of elected and appointed officials and the Town's administrative staff.

For the Board of Commissioners, the CAMA Land Use Plan contains Town policies and provides a guide when making decisions regarding future land use and development, public access, protecting the environment, mitigating natural and manmade hazards, or ensuring that the Town's infrastructure and services are adequate to serve its year round population and the influx of seasonal visitors. While the CAMA Land Use Plan's policies do not have the same status as a local zoning ordinance, except in matters related to development or land uses within Areas of Environmental Concern (AECs), the policies and recommended actions and the future land use map contained in Appendix D help guide decisions on future ordinances and zoning decisions. Moreover, G.S. 160A-382, G.S. 160A-383, G.S. 160A-341, and G.S. 160A-342 require statements of consistency with comprehensive plans or any other locally adopted plan(s) before adopting or rejecting any local code, ordinance, or zoning changes or amendments. Amendments to this plan will be initiated and approved by the Board of Commissioners and will occur in accordance with the guidelines for land use plan amendments under Subchapter 7B, Section 0.4000 of the North Carolina Administrative Code. The land use plan can be amended as whole by a single resolution or in parts by successive resolutions and is subject to special state notice and advertising requirements for land use plan amendments. Copies of the proposed amendment must be available for review at the Town Hall.

In addition to guiding development decisions, the Board of Commissioners will use the CAMA Land Use Plan's policies and recommended actions when making decisions on the Town's capital improvement program (CIP) and its annual operating budgets. The Board of Commissioners will also review the implementation strategy and make periodic adjustments based on budgetary considerations, emerging issues, problems or community needs, or to coordinate with future planning efforts and ongoing projects. All changes to the CAMA Land Use Plan's policies and recommended actions and this implementation strategy will be forwarded to the DENR's Division of Coastal Management (DCM) for its subsequent approval.

Other Town boards and committees will also use the CAMA Land Use Plan. The Town's Planning and Zoning Board will use the plan and its policies to determine the consistency of project plans and development proposals with community goals and objectives. Its policies and recommendations will also guide decisions on whether to grant or deny requests for such

things as ordinance amendments, conditional use permits, variance requests, or the approval of project plans. Other standing committees such as the Shoreline Protection, Sewer, Emergency Preparedness, and Public Area Improvement committees will also find policies and recommended actions that will guide future decision making.

The Town's administrative staff will also use the plan's policies and recommendations in a variety of ways. Staff in the Planning and Inspections Department will use the policies and recommendations when reviewing site plans and development proposals. Various Town departments will use the policies and recommended actions to guide proposals for development projects and plans for public services and facilities. Many of the plan's policies and recommended actions also guide ongoing operations and programs within other Town departments as well, particularly the Public Utilities Department and its efforts to manage the town's infrastructure and address problems associated with stormwater runoff. Accordingly, Town staff will use the implementation strategy to guide budget preparation, the development of the CIP, and make reference to the plan when applying for various sources of federal, state, and county grant funds.

The Town's CAMA Land Use Plan will also be used by other federal and state officials, in particular DENR's DCM. An important use of Holden Beach's CAMA Land Use Plan is for consistency determinations by the DCM for major permits issued pursuant to CAMA regulations. Other state and federal agencies will also use the plan to determine the consistency of their projects and programs with the policies contained in this plan.

The CAMA Land Use Plan will also be of use to a variety of community members. The plan is a useful tool for developers and property owners because it provides guidance on the types of land use and development that are desired within the community. The plan's policies and recommendations will also help developers to craft proposals that are consistent with the Town's goals and objectives, thereby increasing the likelihood that these projects will be approved. The plan also provides information that will help owners and developers to better understand the capabilities and limitations of their property. The plan also provides community members with information to reference when supporting or opposing projects within the community.

10.2 Existing Development Management Program

All land development in Holden Beach is subject to a wide range of state and local permits pursuant to a comprehensive set of state regulations and local ordinances. The County also enforces some provisions of the state building code. The following sections summarize Holden Beach's major ordinances and the regulatory provisions of the Town's development management program [Table 10.1].

Table 10.1: Holden Beach’s Development Management Program

Ongoing Plans & Policies	Land Use & Development	Infrastructure Capacity	Public Access	Hazards	Water Quality
Zoning ordinance	Creates zoning districts that regulate such things as minimum lot size, set backs, uses, height, and parking	Development is required to tie into public water and sewers. Limits density to ensure adequate sewer and water supply.			
Subdivision Regulations	Regulates subdivision and development of larger parcels	Development is required to tie into public water and sewers.			
Building code	NC Building code enforced			NC Building code enforced	
Flood Plain and Damage Prevention Ordinance	Requirements to mitigate potential flood losses that meet or exceed FEMA requirements			All new or substantially upgraded structures have to comply with ordinance	
Septic Tank Regulations	Septic tanks are required to be properly closed since municipal sewer has been installed.	Development is required to tie into public sewer lines.			Septic tank installation is prohibited.
Dune Protection			Limits access to designated dune walkovers.	Dune protection and limits access to designated dune walkovers.	
Stormwater Management Plan and Ordinance	Control stormwater within property boundaries.				Stormwater should not leave individual sites to adversely affect neighboring property or surface waters.
Hurricane Preparedness Plan				Contains policies and actions to mitigate dangers from natural and manmade hazards	

Table 10.2: Dimensional Table of Conforming Uses

Zoning	Type	Lot Area	Lot Width	Front Setbacks	Rear Setbacks	Side Setbacks	Height
R-1	Single-family	5,000	50'	25'	20'	5'	35'
	Two-family	7,500	50'	25'	20'	5'	35'
R-2	Single-family	5,000	50'	25'	20'	5'	35'
	Two-family	7,500	50'	25'	20'	5'	35'
	Multi-family	7,500 (for 1 st 2 family units) plus 2,000 (for each additional unit)	50'	25'	20'	5'	35'
C-1				25'	5' *	5'	35'

* If the Commercial use abuts a residential district, the rear yard requirement is 20'

10.2.A Holden Beach’s Land Development Regulations

The Town of Holden Beach, like other municipalities in the state, has been granted general statutory authority by the North Carolina General Statutes to enact necessary ordinances designed to protect and promote the health, safety and the general welfare of its citizens. Local plans and policies are enforced through ordinances adopted by the Board of Commissioners, which is granted this authority by the Charter ratified February 14, 1969. Below is a listing of Town Ordinances and enforcement provisions related to land use and development.

10.2.A.1 Holden Beach Zoning Code: The zoning ordinance is the most prominent land development regulatory tool used by the Town of Holden Beach. The zoning ordinance was originally adopted in 1972 and in 1985 all existing ordinances were incorporated into the Code of Ordinances. The ordinance regulates location and height of buildings, establishes minimum building lot sizes, and establishes districts in which uses related to residential, commercial, and institutional uses are either allowed or prohibited. The Future Land Use Map in Appendix D contains the following designations that correspond to the following zoning districts:

- Commercial (with Residential): HB-Commercial district (C-1) (See Table 5.4, Section 5.1.A.6)
- Residential single-family (lower density): HB-Rural district (R) (See Section 5.1.A.2)
- Residential single-family and two family: HB-Residential district (R-1) (See Table 5.2, See Section 5.1.A.4)
- Residential single-family/two-family/multi-family: HB-Residential district (R-2) (See Table 5.3, See Section 5.1.A.5)
- Water dependent uses: HB-Rural Special Use (RS) (See Section 5.1.A.3)
- Conservation: HB-Conservation (C) (See Section 5.1.A.1)

In addition to the uses allowed within each district, certain conditional uses are permitted on a case-by-case review process. These zoning districts are displayed graphically on Zoning Map contained in Appendix A. Further information on setbacks and minimum lot size within each district is summarized in Table 10.2.

10.2.A.2 Subdivision Regulations: Since 1969, the Town of Holden Beach has enforced subdivision regulations which guide the general design of newly developing areas within the Town's jurisdiction. A subdivision is the division of any parcel or tract of land into two or more lots for the purpose of development. The purpose of the subdivision regulations is to establish procedures and standards for the development and subdivision of land within the territorial jurisdiction of the Town of Holden Beach.

10.2.A.3 Building Code: The Town of Holden Beach has an active building inspections program and enforces the NC State Building Code, including the codes concerning general construction, plumbing, heating, electrical, fire, and gas, as well as the NC Uniform Residential Building Code. The Town Building Inspectors issue building permits and inspect construction to ensure strict compliance with all code enforcement.

10.2.A.4 Septic Tank Regulations: The Town has in operation a wastewater system which serves the entire incorporated Town. This wastewater system was recently completed in March 2006, and property owners within the town limits are required to connect to the public system within one year of system operation. Septic tanks are required to be properly closed within one year of system operation.

10.2.A.5 Dune Protection: Holden Beach protects its dunes by enforcing its CAMA permitting and the Building Code provisions and by forbidding vehicular traffic on the beach as regulated by the Traffic Code. Moreover, walkways are provided at each beach access and fences line these walkways which guide pedestrian traffic from disturbing the dunes.

10.2.A.6 Stormwater Management Plan and Ordinance: In 1998, Holden Beach adopted a comprehensive Stormwater Management Ordinance that was contained in a Stormwater Management Plan prepared under State DCM contract. The ordinance addresses problems associated with building and other development, especially placement of fill materials on the island. The intent of the ordinance is to control stormwater as much as possible within property boundaries, so that stormwater runoff does not adversely affect neighboring property.

10.2.B CAMA Requirements

The Coastal Area Management Act (CAMA) requires permits for development in Areas of Environmental Concern (AEC). Major permits are necessary for activities that require other state or federal permits, for projects that cover more than 20 acres, or for construction covering more than 60,000 square feet. Ten state and four federal agencies review applications for major permits before a decision is made. General permits are used for

routine projects that usually pose little or no threat to the environment. Minor permits are required for projects, such as single-family houses, that don't require major permits or general permits. The local permit officer (LPO) has the power to issue minor CAMA permits, and approve permit exemptions. Under CAMA regulations, a minor permit is to be issued within 25 days once a complete application is in hand. If the project is simple, the review process often is much shorter.

You must obtain a CAMA permit for your project if it meets all of the following conditions:

- It is in one of the 20 counties covered by CAMA.
- It is considered “development” under CAMA.
- It is in, or it affects, an AEC established by the CRC.
- It doesn't qualify for an exemption.

CAMA defines development as: “any activity in a duly designated area of environmental concern . . . involving, requiring or consisting of the construction or enlargement of a structure; excavation; dredging; filling; dumping; removal of clay, silt, sand, gravel or minerals; bulk heading; driving of pilings; clearing or alteration of land as an adjunct of construction; alteration or removal of sand dunes; alteration of the shore, bank or bottom of the Atlantic Ocean or any sound, bay, river, creek, stream, lake or canal (NCGS 113A-103(5)(a)).”

As general guidance, you are probably in an AEC if your project is:

- In, or on the shore of, navigable waters within the 20 CAMA counties;
- On a marsh or wetland;
- Within 75 feet of the normal high water line along an estuarine shoreline;
- Near the ocean beach;
- Within an ocean high hazard flood area;
- Near an inlet;
- Within 30 feet of the normal high water level of areas designated as inland fishing waters by the NC Marine Fisheries Commission and the NC Wildlife Resources Commission;
- Near a public water supply;
- Within 575 feet of an ORW defined by the Environmental Management Commission.

However, Section 103(5)(b) of CAMA exempts the following activities from permit requirements:

- Road maintenance within a public right-of-way;
- Utility maintenance on projects that already have CAMA permits;
- Energy facilities covered by other laws or NC Utilities Commission rules;
- Agricultural or forestry production that doesn't involve the excavation or filling of estuarine or navigable waters or coastal wetlands (Note: these activities are not exempt from permitting requirements under the state's Dredge and Fill Law.);

- Emergency maintenance and repairs when life and property are in danger; and,
- The construction of an accessory building usually found with an existing structure, if no filling of estuarine or navigable waters or coastal wetlands is involved.

In addition, the CRC defines certain types of minor maintenance and improvement work that do not require a CAMA permit. However, you must receive an exemption certificate before you perform this work (15A NCAC 7K). The following categories of work may qualify for an exemption:

- Additions and modifications to simple structures;
- Shoreline stabilization;
- Maintenance and expansion of existing projects;
- Emergency maintenance and repairs;
- Single-family residences;
- Accessory uses; and,
- Structural maintenance and repair.

From 2000 to 2005, it is estimated that Holden Beach's LPO issued 713 minor permits, 176 minor exemptions, and identified 18 CAMA violations. The DCM issues CAMA general permits for Holden Beach from the Wilmington Regional office of NCDENR. Based upon information obtained from the DCM, 265 general permits were issued for Holden Beach from 2000 to 2005.

10.2.C *Permitting Process*

If construction will result in a modification of a structure, increase the size of the structure, or if new development occurs the following permits may be required:

- **Zoning Permit:** Site plan and description of work to be done shall accompany a Zoning Compliance Application;
- **CAMA Permit:** If the property is located within the Ocean Hazard AEC, the 75' Estuarine AEC, or in a V-Zone then a CAMA permit shall be required; and,
- **Building Permit:** For all construction activities.

If there is no expansion in the size of an existing structure due to development, all which is required is a building and zoning permit. Construction of fences, driveways, signs and businesses require zoning permits. They also require a CAMA permit if located in an AEC.

After an individual applies for the requisite permits, the development code administrator determines whether the project is permitted by the zoning ordinance and complies with existing regulations pertaining to such things as setbacks, FAR, height, parking, flood zone regulations, and other applicable requirements. When a proposed project is located within an AEC, the LPO reviews the project to assure that it is consistent with CAMA regulations and

the land use plan's policies. Of particular concern are CAMA's requirements for buffer zones and erosion setbacks for small and large structures.

After the CAMA review, the building code enforcement officer reviews plans for compliance with building code and floodplain regulations for residential structures. If a commercial project is reviewed, building plan review includes building, flood plain, electrical, plumbing, HVAC and accessibility review to assure that all NC Building Code Regulations are met. A permit is issued only if it meets the aforementioned requirements. A majority of the time, there are meetings with the contractor, owners and architects before a permit is issued. Different fees are charged for building, plumbing, zoning, impact fees, pilings, water, and sewer. The building permit fee is based on cost of work material and labor. The other fees are a set amount.

The zoning code administrator/LPO performs a series of inspections prior to work commencing and after completion of exterior work or work taking place in or near AEC. The inspections performed by zoning code administrator/LPO include:

- Zoning for driveways, fences, buildings, and violations. Inspections are performed prior to work and after completion.
- CAMA inspections are performed before and after applications are submitted and again at the completion of the project.
- Assists the building inspector on various inspections.

The building code administrator also performs a series of inspections. After a building permit is issued, the first inspection is the foundation or piling inspection. The second inspection is a sheeting inspection. This is followed by a framing inspection. A partial elevation certificate is needed at this time. The framing inspection is done when the other trades (plumbing, electrical, etc) have passed their inspections. The next inspection is the insulation inspection. The last inspection is the final inspection. A survey, final elevation certificate, V-Zone certificate, and piling depth statement is needed for this inspection. When the all trades have successfully passed inspection and final inspection has been performed to assure that all building regulations have been met, a certificate of occupancy is issued. There can be other types of inspections as well (e.g., rafter tie, decks, steps).

Many zoning and CAMA violations are identified via citizen complaints. Others are identified by staff. Once a violation is reported, a site visit is performed to locate the violation and take pictures. A letter is then sent informing the property owner of the violation and the means of correcting the violation. When building code violation is identified, a stop work order is posted until a permit is issued. If a violation is found during construction, corrective actions must be taken for work to proceed.

10.2.D Non-regulatory Efforts to Implement CAMA Policies and Recommendations

In addition to using existing ordinances, there are a number of ongoing efforts designed to implement policies and recommendations contained in the CAMA Land Use Plan. Given its geographic location, Holden Beach maintains an aggressive hazard mitigation program that includes a combination of local ordinances (e.g., flood plain ordinance, set backs, etc.), public education, and hazard mitigation planning. The Town routinely updates its Hurricane Preparedness Plan and coordinates pre- and post-storm responses with county and state emergency management officials. These efforts have been very effective as evidenced by the Town receiving a FEMA community rating system (CRS) rating of 8.

Holden Beach also has an aggressive program to promote public access to its beaches, recreational amenities (e.g., parks, etc.), and provides a wide range of recreational activities that serve residents and visitors alike. These recreational amenities attract visitors Holden Beach on a year round basis, but the influx of visitors is most pronounced during summer months.

The Town maintains 21 marked oceanfront public access sites. The number of marked spaces available for parking in public parking lots has increased from 194 spaces in 1995, to 202 spaces in 2000, to 224 spaces in 2005. These figures do not include the public parking available on side streets. These figures are unknown at the present time. Of the 21 marked access sites, 13 are handicapped accessible to the dune crest. There are also 25 handicapped accessible parking spaces. The Town also provides selected amenities such as lighting, rest rooms, showers, picnic tables, trash barrels, and bike racks at various access sites.

However, excessive use of the beaches can present potential environmental problems. Accordingly, the Town tries to balance use of its beaches with the need to protect its dunes and sensitive habitat areas. Examples include limiting pedestrian access to designated dune crossover areas, limiting the width of beach access paths, prohibiting off road vehicles, protecting turtle nesting areas, and promoting beach cleanups. The land use plan's policies and recommendations are designed to further these ongoing efforts. The land use plan's policies and recommendations build upon and expand these ongoing efforts to manage user conflicts associated with its beaches and public trust waters.

Finally, the Town of Holden Beach has been aggressive in its efforts to protect its natural resources and address water quality problems associated with nonpoint source (NPS) pollution. The Town has recently installed a municipal wastewater treatment plant and requires that all residences connect to this system and close existing septic tanks within one year. The Town supports efforts to recycle and reduce the amount of solid waste generated by residents, visitors, and businesses.

10.3 Additional Tools

Full implementation of the policies and recommendations contained in Holden Beach's CAMA Land Use Plan will also require the expansion of the existing development management program and several new planning efforts, projects, and expenditures. The plan recommends reviewing and, where necessary, modifying several local ordinances. For example, the land use plan recommends forming an ad hoc committee to explore whether the creation of an ETJ area on the mainland in order to limit development and its impacts on Holden Beach (Recommended Action 9.1.A.13.a). The plan further recommends several new planning efforts or projects to be implemented by Town departments. Examples include:

- Review ordinances and determine whether changes are needed to facilitate proposals for mixed use development projects in commercial zones (Recommended Action 9.1.A.6.a).
- Work with other public and nongovernmental organizations (e.g., Nature Conservancy) to preserve existing green space and acquire or otherwise protect conservation areas, and other sensitive natural areas to ensure their long-term protection (Recommended Action 9.1.A.7.a).
- Work with the County and other local jurisdictions to minimize the density of development in inland areas along the ICWW, tributaries that drain to the ICWW, and the road corridors that lead to the bridge to Holden Beach (Policy 9.1.A.13).
- Begin planning for the replacement of aging water lines and investigate whether other improvements in its water supply system are needed to serve a growing seasonal population (Recommended Action 9.2.A.2.a).
- Explore the feasibility of potentially transferring the town-owned water distribution system to Brunswick County but will only do so when it results if it will improve service delivery for Town residents (Recommended Action 9.2.A.2.b).
- Town officials will continue to work with NCDOT to help improve traffic conditions both on the island and in surrounding areas as a result of a growing seasonal population, and growing population on the mainland in areas near Holden Beach (Recommended Action 9.2.A.6.a).
- Town officials will work with developers to incorporate transportation improvements into new commercial and residential development projects when applicable (Recommended Action 9.2.A.6.b).
- Identify additional locations along the ICWW that could be developed to improve public access (Recommended Action Item 9.3.A.2.a).
- Continue to work with the COE to obtain approval for a 50-year plan of work to stabilize shoreline and inlet areas through techniques such as periodic beach nourishment of eroded areas (Recommended Action 9.5.A.12.a).
- In cooperation with the County, develop a strategy for sustainable, long-term sources for funding ongoing beach nourishment projects in the event that federal and state funding is reduced (Recommended Action 9.5.A.12.b).
- Update the Town's Hurricane Preparedness Plan on an annual basis (Policy 9.5.A.14).

It also recommends a variety of actions that involve expenditures of public funds. Some of the recommended actions include:

- Use a portion of the occupancy tax revenue to support the efforts of the Tourism Development Authority (TDA) to grow the tourism market and, support advertising campaigns designed to attract visitors (Recommended Action 9.1.A.12.a).
- Complete the planned renovations to the Town's Town Hall facilities in order to provide additional space for departments to provide services to the growing year round and seasonal population on the Island (Recommended Action 9.2.A.1.a).
- Improve existing public access facilities (Recommended Action 9.3.A.1.a).
- Develop new public access facilities (Recommended Action Item 9.3.A.2.a).
- Purchase property unsuitable for development due to coastal hazards (Policy 9.3.A.4 & Policy 9.5.A.10).
- Development of a privately operated off-island parking area to reduce vehicle traffic and congestion on the island (Recommended Action 9.3.A.5.a)
- Build an emergency operations center on land it owns on the mainland. The emergency operations center will be used in the event the Island has to be evacuated or the bridge is closed due to high winds (Recommended Action 9.5.A.8.a).

Implementing these additional tools will have varying fiscal consequences. Some actions are relatively inexpensive and can be implemented using existing resources. Others have significant fiscal consequences and would have to be funded through mechanisms such as the Town's capital improvement program (CIP) or rely on the availability of federal, state, or county grant funds.

10.4 Action Plan and Implementation Schedule

In order to prioritize the implementation of these additional tools, a Public Workshop was held on May 22, 2007 where the public had an opportunity to review the draft policies and recommended actions. The steering committee then developed an action plan and implementation schedule for proposed regulatory changes, recommended planning efforts, projects, and other non-regulatory actions. Factors considered in the priority ranking were public input at the June 2006 and May 2007 Public Workshops, the discussions at steering committee meetings held throughout the planning process, deadlines in other plans, and the availability of federal, state, or local funds. The action plan is contained in Appendix E. It lists the each policy and recommended action, the responsible authority, and the management topic(s) addressed. It also lists its priority status as either ongoing or as a high priority action (years 1 – 3), medium priority (years 3 – 6 or as opportunity or resources permit), or low priority (as opportunity or resources permit). Given resource and time constraints, Holden Beach is unlikely to be able to implement more than 7 to 9 actions over a five year period. Accordingly, the number of high priority actions listed in Appendix E is limited to those considered to be of highest priority.

The action plan is important because it will be used as the basis for preparing the two-year implementation status report required by CAMA land use planning grant rules (15A NCAC 7L.0511). The current rules require the submission of an Implementation Status Report every two years for as long as the plan remains in effect. Since resources and priorities change, the work plan will be adjusted on an annual basis. This assessment will include several factors including funding availability, shifting priorities, information, and conditions that may dictate rescheduling, adding, or dropping recommended policies and actions, and necessary modifications to completion schedules.

Section 11

Required Policy Analysis

11.0 Introduction

The Division of Coastal Management's (DCM's) *Technical Manual for Land Use Planning* requires local governments to analyze the CAMA Land Use Plan's policies and recommended actions and the future land use map. Specifically, DCM requires local governments to:

- Examine the consistency of the plan with the management topics;
- Examine the consistency between the future land use map and the land use plan's requirements; and,
- Analyze the impact of the policies and recommended actions on the management topics specified in the guidance manual.

This analysis is contained in the following sections and in Appendix F.

11.1 Consistency of the Policies with Management Topics

The first analysis is designed to ensure that the plan's goals and policies are consistent with the DCM's required management topics. Management topics are the categories of local land use and development policies determined by the Coastal Resources Commission (CRC) to be essential for proper use, development, and protection of natural and manmade resources in coastal areas. The DCM guidelines identify six management topics:

- ***Land Use Compatibility***: Management of land use and development in a way that minimizes its primary and secondary impacts on natural and man-made resources;
- ***Infrastructure Carrying Capacity***: Strategies to ensure that infrastructure is available to support anticipated and planned development and that it is managed to protect AECs and other fragile areas;
- ***Public Access***: Strategies for maximizing community access to beaches and public trust areas;
- ***Water Quality***: Land use and development policies and strategies to protect quality waters and restore quality in waters that are non-supporting;

- **Natural Hazard Areas:** Policies to reduce the communities vulnerability to natural hazards; and,
- **Local Areas of Concern:** Specific policies and strategies to address local planning and development goals.

In Holden Beach, the local areas of concern have been incorporated into the other five management topics. The following sections describe the consistency of Holden Beach's CAMA Land Use Plan's goals and policies with the DCM's required management topics.

11.1.A Land Use Compatibility

The CAMA Land Use Plan's goal is to *adopt and apply local policies that balance protection of the natural resources and fragile areas with economic development* (9.1). One objective is associated with this management topic: "Manage growth and development while protecting the environment to ensure that the Town remains an inclusive, wholesome family community that maintains its residential character, natural resources, and its recreational amenities (9.1.A)." To accomplish this goal and objective, the plan contains a series of policies and recommended actions that provide a strategy for mitigating the impacts of land development on natural resources and fragile areas.

The primary strategy for mitigating impacts on natural resources and fragile areas is a development management program with local ordinances that limit density and mitigate impacts for redevelopment and new development by setting minimum lot sizes, setbacks, and height restrictions. Moreover, all new development and redevelopment is required to tie in to existing public water and sewer infrastructure to help limit impacts on natural resources. Accordingly, the CAMA Land Use Plan's policies and recommended actions are consistent with this management topic.

11.1.B Infrastructure Carrying Capacity

The CAMA Land Use Plan's goal for infrastructure carrying capacity is to *ensure that public infrastructure systems are appropriately sized, located and managed so the quality and productivity of the AECs and other fragile areas are protected and restored* (9.2). The one objective associated with this management topic is to: "ensure that the location and capacity of public infrastructure is consistent with the Town's growth and development goals (9.2.A)". Therefore, the CAMA Land Use Plan's policies and recommended actions focus primarily on addressing potential problems identified during the planning process and ensuring that the infrastructure systems are properly managed.

To that end, the CAMA Land Use Plan recommends formalizing the existing agreement with Brunswick County to ensure that the County maintains an adequate supply of water to serve the Town's growing population. This action is designed to ensure that there is efficient and uninterrupted operation of water facilities in order to minimize adverse impacts on AECs or

other fragile areas. All new development and redevelopment is also required to tie into existing public water and wastewater services to minimize adverse environmental impacts.

The Island's transportation system and its one connection to the mainland (i.e., the Holden Beach Bridge) are adequate to serve current and projected populations in the event that an evacuation is ordered. However, the CAMA Land Use Plan contains other policies and recommendations pertaining to its transportation system. The Town supports federal and state road and bridge improvement programs. The plan also recommends treating stormwater using infiltration and other structural and nonstructural BMPs to ensure that future road improvements reduce nonpoint source (NPS) pollution. Other policies and recommendations are designed to further reduce NPS runoff from existing infrastructure. The Town will also consider proposals from private entities for establishing public transportation to the mainland to reduce automobile traffic. Accordingly, the CAMA Land Use Plan's policies and recommended actions are consistent with this management topic.

11.1.C Public Access & Recreation

The CAMA Land Use Plan's goal for public access is to *maximize public access to the beaches and public trust waters of the Town of Holden Beach and maximize recreational opportunities for residents and visitors* (9.3). Two objectives are associated with meeting this management topic:

- Implement policies and recommendations that assure satisfactory access to all segments of the community including persons with disabilities and provide recreational opportunities for residents and visitors alike (9.3.A); and,
- Manage conflicting uses of beaches and public trust waters (9.3.B).

To accomplish this goal and the corresponding objectives, the plan contains a series of policies and recommended actions that provide a strategy for ensuring that there is access to all segments of the community. There are already marked public access sites along the ocean front. While this is adequate to serve the current population, and the public has access to all nourished areas, the Town of Holden Beach would like to improve public access to the ocean front and ICWW where practicable. In addition to developing new public access facilities, the CAMA Land Use Plan also focuses on improving existing access facilities.

11.1.D Water Quality & Natural Environment

The CAMA Land Use Plan's goal for water quality and the natural environment management topic is to *maintain and where possible improve the natural environment and water quality within and adjacent to Holden Beach* (9.4). Three objectives are associated with this management topic:

- The Town shall take actions designed to protect and where possible enhance and restore the sensitive natural resources located in and adjacent to the Town of Holden Beach (9.4.A);
- The Town will work toward the protection and enhancement of North Carolina's sport and commercial fisheries industries (9.4.B); and,
- Reduce pollutant loadings in stormwater generated within the Town of Holden Beach (9.4.C).

To accomplish this goal and the corresponding objective, the plan contains a series of policies and recommended actions that provide a strategy for protecting and restoring the quality of local waters and addressing nonpoint sources of pollution. The strategy embodied in the CAMA Land Use Plan focuses on actions that can be taken to restore water quality rather than on tighter regulation of new development. These strategies are clearly consistent with the requirements of this management topic. The CAMA Land Use Plan also prohibits new direct stormwater discharges and recommends using structural and nonstructural BMPs to improve the quality and reducing the quantity of NPS runoff from existing stormwater discharges, including those emanating from Town property.

11.1.E *Natural & Manmade Hazards*

The CAMA Land Use Plan's goal for the hazards management topic is *protect public health and safety from the damaging effects of storm surges, wave action, flooding, high winds, and erosion associated with hurricanes, severe weather, and other hazards* (9.5). Two objectives are associated with this management topic:

- The Town will be proactive in its efforts to minimize damage and threats to public health and safety associated with hurricanes, severe weather, and other hazards (9.5.A); and,
- In the period following a hurricane, severe weather event, or other disaster, the Town will work as quickly as possible to restore essential services related to public health, safety and welfare (9.5.B).

To accomplish this goal and the corresponding objectives, the plan contains a series of policies and recommended actions that provide a strategy for conserving the storm protection functions of beaches, dunes, flood plains, wetlands, and other natural features. The Town's existing development management program preserves storm protection functions in several ways. The sand dune ordinance provides important protections to maintain the ability of dunes to serve as a storm buffer. The Town also supports regular beach nourishment efforts to maintain the ability of beaches and dunes to provide an important buffer to mitigate potential storm damage. The Town enforces the state's building code and has a minimum housing ordinance designed to ensure that buildings will be fit for human habitation. The Town's Flood Plain Damage and Prevention Ordinance contains additional building requirements that meet or exceed FEMA requirements. The ordinance's stormwater management requirements also help eliminate flooding of adjacent properties. Moreover, many of the actions recommended to reduce stormwater from existing infrastructure should

also help minimize future flooding. The Town regularly updates its Hurricane Preparedness Plan and also engages in various public efforts to educate the public about the dangers posed by these natural hazards. These efforts have been effective as evidenced by the fact that the Town has a CRS rating of 8.

11.1.F Local Areas of Concern

As noted above, the plan contains no specific goals or objectives related to local areas of concern. Instead, local concerns have been incorporated into the other five management topics. For example, policies and recommended actions designed to preserve the Town's downtown area and maintain a viable commercial center have been incorporated into the section on land use and development. The section on public access and recreation includes policies and recommended actions that address a variety of local concerns pertaining to user conflicts, the impacts of shoreline uses on public access, and the provision of recreational facilities to residents and visitors alike. The incorporation of policies and recommended actions from other planning documents into the corresponding sections of this plan is another example of how this management topic was addressed by the CAMA Land Use Plan's policies and recommended actions.

11.2 Consistency Between the Land Use Plan's Policies and the Future Land Use Map

The DCM's guidelines also require analyzing the consistency between the CAMA Land Use Plan's policies and the future land use map. Specifically, DCM requires local governments to:

- Summarize the residential density and development intensity encouraged by each of the land classifications or designations on the map;
- Identify any material differences between the development patterns shown on the future land use map and the development constraints shown on the environmental composite and LSA maps;
- Describe any material differences between the spatial patterns of land classifications that depend on water and sewer and planned development;
- Describe development planned for natural hazard areas, how uses are consistent with associated risks, and the capacity of the evacuation infrastructure; and,
- Describe how land classifications and spatial patterns on the map will protect open shellfish waters and restore closed or conditionally closed shellfish waters.

Since the plan recommends no zoning changes that would change density, the future land use map contained in Appendix D displays development patterns that mirror the existing land use and zoning maps contained in Appendix A.

The future land use classification and the correlating existing zoning districts are summarized below:

- Commercial (with Residential): HB-C-1 (See Table 5.4, Section 5.1.A.6)
- Residential single-family (lower density): HB-R (See Section 5.1.A.2)
- Residential single-family and two family: HB-R-1 (See Table 5.2, See Section 5.1.A.4)
- Residential single-family/two-family/multi-family: HB-R-2 (See Table 5.3, See Section 5.1.A.5)
- Water dependent uses: HB-RS (See Section 5.1.A.3)
- Conservation: HB-C (See Section 5.1.A.1)

11.2.A Residential Density

The plan recommends no specific zoning changes in terms of the uses or densities within existing zoning categories that encompass the Town's incorporated area. Accordingly, the development densities depicted on the Future Land Use Map in Appendix D are similar to those contained on the Existing Land Use and Zoning Maps contained in Appendix A. The density requirements within the zoning categories can be found in Table 10.2 in Section 10: Tools for Managing Development. These densities are consistent with historical development patterns on the Island. They are also consistent with the capabilities of the Town's natural systems since all residential and commercial development is served by public water and wastewater systems.

11.2.B Comparison of the Environmental Composite and LSA Maps with the Future Land Use Map

A comparison of the Environmental Composite Map [Appendix C], Existing Land Use Map and Zoning Maps [Appendix A], and the Future Land Use Map [Appendix D] indicates that there are no material differences of major concern. Nearly all of the vacant parcels are located in Class II or III lands on the Environmental Composite Map as there are no Class I lands in Town limits. Accordingly, most current and future development will be located on Class II or III lands. Impacts on the environment will be minimized through various zoning requirements that restrict density and uses, require the treatment of stormwater on site, and through the provision of services such as public water and wastewater treatment.

The comparison between the Land Suitability Analysis (LSA) Map [Appendix C] and the Future Land Use Map [Appendix D] also indicates that much of the land left for development in the incorporated area (excluding oceanfront lands) is classified as medium, medium-highest, or highest suitability due to the presence of waste water and public drinking water systems. However, there are other areas where the LSA indicates that land is classified as being less suitable for development. In many of these areas, development is currently allowable through current zoning requirements and there would be significant legal barriers associated with trying to restrict development of these parcels.

It is also worth noting that the LSA methodology has problems when applied to long, narrow barrier beaches such as Holden Beach due to the scale and dynamic nature of the data employed by the model. The land's proximity to flood zones and location in storm surge areas will inherently limit the suitability of the lands to development along much of the barrier beach, particularly near the inlet hazard areas. To address these issues, the land use plan notes a variety of efforts taken by the Town to mitigate these hazards as evidenced by the Town's CRS rating of 8.

11.2.C Availability of Water and Sewers to Future Development

The entire Island is now served by public water and wastewater systems and there is adequate capacity to serve projected population increases in incorporated areas. The plan does not recommend any changes in zoning density or increases in height limits what would add to the demands on the waste water or drinking water systems. As a result, there is adequate capacity within both systems to serve current and projected population growth as well as the seasonal influx of visitors. Accordingly, there are no material differences between the spatial patterns of land classifications that depend on water and sewer and planned development depicted on the Future Land Use Map contained in Appendix D.

11.2.D Natural Hazards

Given the Town's geographic location and configuration, nearly the entire community is located in a natural hazard area as indicated graphically by the Special Flood Hazard Zones, Flood Zone, and Hurricane Storm Surge Inundation Maps contained in Appendix A. Since the Town is nearly built out, nearly all future development within the incorporated areas of the town [Appendix D] will be located in hazard zones. However, the uses are consistent with risks faced by current homeowners on the island. Moreover, current risks are being effectively mitigated as evidenced by the Town's CRS rating of 8. There is also sufficient capacity on the bridge to evacuate current and projected population increases.

11.2.E Protecting Shellfish Waters

Since the Future Land Use Map depicted in Appendix D mirrors the Existing Land Use and Zoning Maps contained in Appendix A, the spatial patterns depicted on these maps are unlikely to have a discernable impact, positively or negatively, on shellfish waters. The Town's requirements contained in its stormwater management ordinance helps limit the impacts of new development on shellfish waters. Moreover, the installation of a sewer system and the corresponding reduction in the usage of septic systems combined with stormwater improvement projects should help further protect these shellfish waters. However, these activities in and of themselves may be unlikely to restore closed or conditionally closed shellfish waters because these waters are impacted by nonpoint runoff from inland areas as well as the density of recreational boats in the canals. Accordingly, restoring closed or conditionally closed shellfish waters will require actions such as:

- Public involvement and education;
- Voluntary implementation of BMPs by current homeowners in the watershed;
- Installation of pumpout facilities; and,
- Installation of structural and nonstructural BMPs to treat stormwater from existing roads, parking lots, and other impervious surfaces within the watershed.

Thus, town officials will continue to work with officials in Brunswick County and adjacent communities to reduce fecal coliform loadings in tributaries that drain to the ICW and other waters adjacent to Holden Beach.

11.3 Impact of the Policies on the Management Topics

The final element of the required policy analysis focuses on determining the impact of the CAMA Land Use Plan's policies and recommend actions on the management topics. The analysis must describe both the positive and negative impacts. If there are negative impacts, then there must be policies or recommendations designed to mitigate the negative impacts.

This analysis was completed by developing the matrix contained in Appendix F. The matrix lists the management topics along one axis and all of the policies and recommended actions along the other axis. Table F.1 then compares each policy and recommended action to each management topic and its benchmarks. While local governments are free to develop their own benchmarks that reflect local planning circumstances, this analysis focuses on the benchmarks proposed by DCM.

The analysis then identifies whether the implementation of the policy or recommended action will be *beneficial*, *neutral*, or *detrimental*. For each policy whose impact is determined to be beneficial or detrimental, a brief summary that led to that conclusion is provided. For those policies and recommendations with a negative impact on a management topic, policies, methods, programs, and processes to mitigate these impacts must be provided. The completed analysis is contained in Appendix F.

Supporting GIS Maps

- Coastal Wetland Areas and Protected Lands Map
- Estuarine Waters and Closed Shellfish Areas Map
- Significant Natural Heritage and Fish Nursery Map
- Special Flood Hazard Areas Map
- Map of Storm Surge Inundation from a Fast Moving Hurricane
- NC CREWS Exceptional and Substantial Wetlands Map
- Existing Land Use Map
- Zoning Map
- Community Facilities (Water System) Map
- Community Facilities (Sewer System) Map
- Transportation Systems and Public Access Facilities Map

Appendix B

Analysis of the Implementation of the 1997 Land Use Plan

B.0 Introduction

This final section of the report analyzes the progress made in implementing the 1997 CAMA Land Use Plan Update. The steering committee analyzed each policy to determine the extent to which it had been implemented. In many cases, the polices were implemented or some comparable course of action was taken. In a few instances, local officials determined that the recommended policy or action warranted no further action. The analysis concluded that considerable progress was made in implementing the 1997 CAMA Land Use Plan Update. The following sections summarize some of the major findings from the policy analysis. The detailed analysis is contained in Appendix B.

B.1 Land Use and Development

Many of the policies contained in the 1997 CAMA Land Use Plan Update focused on issues related to land use and development. Significant progress was made in implementing these policies and as indicated in the analysis contained in Appendix B, most of the land use policies and recommendations are implemented through local zoning ordinances as well as the Town's rules and regulations. The Town's zoning ordinances limit density and height in each of the zoning districts. The zoning districts also direct growth in ways that ensure that residential development consists of a mix of single-family, duplex, and multi-family structures. The zoning ordinance also directs the location of commercial development and promotes tourism related businesses in the commercial districts on the island.

In the future, one of the big challenges appears to be ensuring the viability of the commercial property on the island as residential land values continue to soar. It will also be important to work with the County to minimize the impacts of development on the mainland, particularly development along the ICWW and the road corridors leading to the island. The Town will also need to work closely to minimize traffic problems associated with a growing year round and seasonal population on the mainland. Moreover, as the Island continues to develop it will be important to seek grants to purchase natural areas and to work with private and public land owners to acquire lands that can be used for public access, recreation, or conservation areas.

B.2 Infrastructure Carrying Capacity

A number of the policies in the 1997 CAMA Land Use Plan Update focused on ensuring that the Town had sufficient infrastructure to meet the demand resulting from increased development and a growing seasonal population. Much progress was made in implementing many of these recommended improvements. The Town constructed a new sewage treatment system which became operational in March 2006. By May 31, 2007, all residents must be connected to the system. The Town continues to work with Brunswick County to ensure that there is an adequate supply of water to serve the seasonal population. It also constructed a second waterline to the mainland in 1999 to ensure that there was adequate pressure during periods of peak seasonal population. The Town also continues its efforts to annually prepare a five-year capital improvement program (CIP) that funds necessary infrastructure improvements. The Town also procures funding under the Powell Bill to fund various road improvements.

In the coming years, it will become increasingly important to address the growing traffic problem along the road corridors leading to the Island. The Town will also have to begin planning for the replacement of aging water lines on the Island. The Town also purchased property on the mainland to construct a new emergency operations center and is working on renovating the existing Town Hall facility to provide additional space for the Police Department and other departments. It will also continue working with the COE to get approval for a 50-year beach nourishment project designed to protect the Town's infrastructure, homeowners, and commercial businesses.

B.3 Public Access

The 1997 CAMA Land Use Plan Update had several policies and recommendations pertaining to improvements in public access and other recreational facilities. Significant progress was made in several areas. The Town received several CAMA grants to improve public access sites. A public access site to the ICWW along Halstead Street was constructed. The Town also received approval to build an additional pier along Jordon Boulevard. Grant funds were also received to build an educational trail in conservation wetlands. A state wildlife boat ramp was constructed. The Town also oversees the maintenance dredging of canals on the Island and supports other private and public dredging activities. It also provided funds for the Lockwood Folly Inlet Dredging Project.

In the future, the increased demand from a growing year round population in the County on the mainland and the seasonal population will continue to increase demand for public access facilities and parking. Accordingly, in the next five to ten years a variety of improvements to existing oceanfront access sites may be needed. Additional access to the ICWW is also needed. The Island owned by the Town also presents an important resource that could possibly be used for passive recreation or environmental education.

B.4 Water Quality and Natural Environment

The 1997 CAMA Land Use Plan Update contains a variety of policies designed to protect water quality and protect the natural environment. Many of these policies are implemented through the CAMA permit program as well as the application of current zoning ordinances that require development to be located in ways that minimize impacts on the natural environment. Limits on density and height also help to minimize impacts on the environment. The Town also undertook several other actions that are expected to make a noticeable improvement in environmental conditions. The Town's sewage treatment facility was completed in March 2006 and all homeowners will be connected to the system by May 31, 2007. Removing the usage of septic systems should also help improve the quality of ground and surface water quality in the region after some period of time. The Town also adopted a stormwater ordinance that requires all new development to use BMPs designed to treat the first 1 ½ inches of stormwater. The Town continues to implement its stormwater management plan and recently completed two projects to improve the management of stormwater along Ocean Blvd. as well as some side streets.

B.5 Hazard Mitigation

Given the geographic location of Holden Beach, it should not be surprising that 1997 CAMA Land Use Plan Update contains a variety of policies and recommendations pertaining to hazard mitigation. Many of these policies are implemented through its land use zoning ordinance and its Flood Prevention Ordinance. The Town is also an active participant in the National Flood Insurance Program (NFIP) and has a Class 8 rating from the community rating system and continues to implement its Hazard Mitigation Plan. The Town also recently made major revisions to its Hurricane Preparedness Plan and updates it on an annual basis. The Town recently purchased land on the mainland that will be used for a new emergency operations center in the event the bridge is closed due to high winds or when the Island is evacuated during a major storm event. The Town has also undertaken 5 beach nourishment projects since 2001 to protect public infrastructure as well as private and commercial property. The Town continues to work with the COE to get approval for a 50-year plan of work to stabilize the shoreline and inlet hazard areas.

Table B.1: Analysis of the Implementation of the 1997 CAMA Land Use Plan

Current Policies: Land Use & Development	Accomplishments, Constraints, & Implementing Ordinances
<i>Residential and Commercial Development:</i> It is the policy of the Town of Holden Beach to continue to support primarily residential development on the island, while limiting any additional commercial development to the existing commercial zone. The town does not support increasing the size of the commercial zone.	<ul style="list-style-type: none"> ▪ There were no expansions of the commercial zone or commercial development in residential zones ▪ In 2006, the town approved a revision of its commercial code
<i>Consistency with Zoning Regulations:</i> All new development and redevelopment will adhere to the Town’s building and development regulations and to the density requirements set forth in the Zoning Ordinance.	<ul style="list-style-type: none"> ▪ There have been no approvals for density increases beyond those set forth in the zoning ordinance
<i>Community Attitude Toward Growth:</i> It is the policy of the Town of Holden Beach to manage the Town’s growth and development in balance with the environment and the provision of municipal services, and consistent with the community vision statement.	<ul style="list-style-type: none"> ▪ In 2006, the town approved a revision of its commercial code
<i>Growth Patterns Desired:</i> It is the policy of the Town of Holden Beach to limit building height to 35 feet. It is also the policy of the town to work to lower building density on undeveloped property on the island, and to prevent the expansion of the commercial zone while restricting new development in those zones to architectural standards set by the Board of Commissioners.	<ul style="list-style-type: none"> ▪ Height limit is implemented through current zoning ordinances. ▪ The Town has decided against developing specified architectural standards. Instead, it works with developers to improve aesthetics.
<i>Minimizing Development Impacts on Conservation Zones:</i> The town will enforce state and local regulations involving development in or adjacent to conservation zones, and set their preservation as a long term objective.	<ul style="list-style-type: none"> ▪ Implementation of the Town’s zoning ordinances protects conservation zones. ▪ The town’s stormwater plan emphasizes protection of the AECs ▪ New sewer system reduces the impacts of development and improves water quality ▪ Town continues to work with COE and CAMA to protect conservation areas
<i>Industrial Impact of Fragile Areas:</i> It is the policy of the Town of Holden Beach to prohibit any form of industry other than that associated with tourism. The meaning of the word “industry” as it applies to tourism related business activities simply provides a common category reference for tourist activities.	<ul style="list-style-type: none"> ▪ No proposals during the last five years

<p>Tourism: It is the policy of the Town of Holden Beach to support and promote tourism as an essential economic activity having direct positive impact of future development.</p>	<ul style="list-style-type: none"> ▪ The Town continues to support the Chambers of Commerce ▪ 1 percent of the occupancy tax goes to the tourism development authority (TDA) and its efforts to grow the tourism market ▪ Town advertises in the NC Visitors Guide regularly to attract tourists ▪ Restaurants and retail shops are encouraged in commercial zones on the Island
<p>Commitment to State and Federal Programs: It is the policy of the Town of Holden Beach to support state and federal programs such as coastal area management, erosion control and mitigation, public recreational access, highway and road improvements, dredging (channel maintenance and beach nourishment), and other similar programs that may be appropriate for the town.</p>	<ul style="list-style-type: none"> ▪ Town is a member of many organizations committed to supporting these programs (e.g., Brunswick Beaches Consortium) ▪ Town provides a local CAMA permit officer ▪ Town remains committed to supporting these federal and state programs
<p>Continuing Public Participation Policies: It is the policy of the Town of Holden Beach to continue to include Holden Beach property owners in the land use planning process, so they may express their views and concerns, and to broaden their knowledge of planning issues. It shall also be Holden Beach policy to review the policy and implementation section of this Land Use Plan, once adopted, on an annual basis to review how policy implementation is taking place.</p>	<ul style="list-style-type: none"> ▪ Implemented through standing committees and boards (e.g., planning board and board of adjustment) as well as the Town’s website and cable access channel ▪ Town reviews progress implementing the land use plan on a regular basis and makes changes to policies when necessary (e.g., revised the bulkhead section).
<p>Other Areas Where Policies and Recommended Actions Are Needed:</p>	
<ul style="list-style-type: none"> ▪ Apply for grants to purchase fragile areas ▪ Approach owners about gifting lands that can be used for access, recreation, or conservation areas ▪ Consider using mixed use development to help preserve the integrity of existing commercial zones 	

Current Policies: Infrastructure Carrying Capacity	Accomplishments, Constraints, & Implementing Ordinances
<p>Local Commitment to Providing Services: It is the policy of the Town of Holden Beach to provide services such as fire protection through a volunteer fire department, police protection, water distribution service and solid waste removal. However, the town recognizes that it may be necessary to examine, during the planning period, the feasibility of eventually transferring the town-owned water distribution system to Brunswick County.</p>	<ul style="list-style-type: none"> ▪ Town remains committed to providing these services ▪ Town continues to explore the advantages and disadvantages of potentially transferring the town-owned water distribution system to Brunswick County
<p>Constraints to Development in Flood Prone Areas, Soil Suitability and Septic Tank Use: It is the policy of the Town of Holden Beach to allow construction on subdivided lots with septic tanks if all federal, State and local permits are obtained.</p>	<ul style="list-style-type: none"> ▪ Policy is no longer valid ▪ Town completed construction of a sewer system in March 2006 and all residents must be connected to the system by May 31, 2007
<p>Protection of Potable Water Supply: Although the water source for the Brunswick County water system is outside the Holden Beach planning jurisdiction, Holden Beach policy is to support and encourage the protection of the potable water supply well sites and river in-flow area through land use regulations and zoning regulations of Brunswick County and the State of North Carolina.</p>	<ul style="list-style-type: none"> ▪ Town supports the County’s long range water master plan, which should provide an adequate supply of water to serve the town’s growing seasonal population ▪ Town constructed a second waterline to the mainland in 1999 to help ensure an adequate flow during times of peak demand ▪ Town continues to work towards improved water conservation by its citizens ▪ Construction of the town’s sewer system should help protect groundwater supplies in and adjacent to the community
<p>Capital Improvements Plan: It is the policy of the Town of Holden Beach to prepare a Five-Year Capital Improvements Plan prior to preparing the 1999-2000 operating budget.</p>	<ul style="list-style-type: none"> ▪ Town prepares a 5-year CIP on an annual basis that helps fund infrastructure improvements ▪ Town annually procures money from the Powell Bill for road improvements in the community
<p>Other Areas Where Policies and Recommended Actions Are Needed:</p>	
<ul style="list-style-type: none"> ▪ Continue to maintain no parking areas along Ocean Blvd. to improve pedestrian safety ▪ Prevent trees in the areas between the sidewalks and roadway along Ocean Blvd. to improve pedestrian safety ▪ Work with Brunswick County to improve sewer coverage in areas outside the town ▪ Need to begin planning for the replacement of aging water lines on the Island and develop a strategy for financing these capital improvements ▪ Continue to work with the COE to obtain approval for a 50-year beach nourishment project designed to protect the town’s infrastructure, homeowners, and commercial property. ▪ Town shall continue its efforts to remodel town hall facilities and construct an off island emergency operations center 	

Current Policies: Public Access & Recreation	Accomplishments, Constraints, & Implementing Ordinances
<p>Public Beach and Waterfront Access: It is the policy of the Town of Holden Beach to support the use of CAMA access grants to improve beach and Intracoastal Waterway access for all residents and public visitors.</p>	<ul style="list-style-type: none"> ▪ Town received several CAMA grants to improve public access ▪ Town continues to apply for grants ▪ State wildlife ramp was constructed
<p>Additional Public Access Facilities: The town will seek to acquire land for additional beach access locations, and to construct as many accessways as possible to American Disabilities Act standards. The town will also seek to provide sufficient Intracoastal Waterway access.</p>	<ul style="list-style-type: none"> ▪ Constructed an ICWW access along Halstead St. funded in part by a CAMA access grant ▪ Approval for an additional pier along Jordon Blvd. ▪ Received funds to construct an educational trail in conservation wetlands
<p>Public Access Parking: In that regard, Holden Beach supports the establishment of “No Parking” zones along the selected road right-of-way, and public frontal dune walkways and ramps at selected points along the beach front.</p>	<ul style="list-style-type: none"> ▪ Town plans to continue to maintain some no parking zones in order to manage access along the beach
<p>Marinas, Floating Homes, Moorings, Mooring Fields, Dry Stack Facilities: It is the policy of the Town of Holden Beach to prohibit the development of any additional marinas on the island. Dry stack storage of boats and floating home development will not be approved for the island. Commercial seafood vessel dockage along the Intracoastal Waterway is deemed acceptable. All moorings in that regard must conform to CAMA and State regulations.</p>	<ul style="list-style-type: none"> ▪ Implemented through the Town’s zoning ordinances.
<p>Upland Excavation for Marina Basins: It is the policy of the Town of Holden Beach not to allow upland excavation for marina basins.</p>	<ul style="list-style-type: none"> ▪ Implemented through the Town’s zoning ordinances.
<p>Dredging to Support Commercial and Sport Fishing Facilities: In order to expand Holden Beach’s sport and commercial fishing, Holden Beach will permit private and public dredging activities which will positively affect those industries when all federal, State and local permits are obtained. It is recognized that in dredging and stabilization activities, some fish habitat damage may occur. Only those projects which have a reasonable likelihood of providing greater benefits than damage for marine life will be supported. All dredging and stabilization projects must be performed in a manner which will do minimal damage to fish habitats.</p>	<ul style="list-style-type: none"> ▪ Town oversees the maintenance dredging of canals on the Island ▪ Town continues to support other private and public dredging activities when all appropriate permits are obtained ▪ Town provides funding for the Lockwood Folly Inlet dredging
<p>Other Areas Where Policies and Recommended Actions Are Needed:</p>	
<ul style="list-style-type: none"> ▪ Additional public access facilities and pocket parks along the ICWW are needed. Possibilities include the end of Sandspur St and the end of Ferry Road. ▪ Island adjacent to the 800 block offers opportunities for passive recreation and environmental education ▪ Continue efforts to expand pedestrian and bicycle safety along the island and to reduce vehicle traffic ▪ Add additional improvements to existing access sites where practicable or feasible ▪ Expand parking associated with beach access where practicable or feasible ▪ Identify places where the Town can assume responsibility for existing access sites and develop them for use by the public 	

Current Policies: Water Quality & Natural Environment	Accomplishments, Constraints, & Implementing Ordinances
<p>Use of Package Treatment Plants: Package treatments plants are not permitted, but State-approved alternative systems will be considered for individual housing units on an individual design basis.</p>	<ul style="list-style-type: none"> ▪ Town now has a sewer system and all homeowners on the Island are required to connect to the system by May 31, 2007
<p>Appropriate Land Use in Areas of Environmental Concern: It is the policy of the Town of Holden Beach to conserve and manage estuarine waters, coastal wetlands, public trust areas, and shorelines, as an interrelated group of AECs, so as to safeguard and perpetuate their biological, social, economic, and aesthetic values and to ensure that development occurring within the AECs is compatible with natural characteristics so as to minimize the likelihood of significant loss of private property and public resources.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning ordinances and by maintaining a local CAMA officer who implements the state’s requirements ▪ Construction of a sewer system and elimination of functioning septic systems should reduce impacts to AECs ▪ Implementation of the Town’s stormwater ordinance requires all new development to have BMPs to treat the first 1 ½ inches of rain. This helps protect the AECs
<p>Development in Environmentally Fragile Areas: It is also the policy of the Town of Holden Beach (following the above rationale) to properly and effectively manage development inside or adjacent to 404 wetlands, hazardous areas (see part VI, Section “E”), and other environmentally fragile areas.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning and flood prevention ordinances and by maintaining a local CAMA officer who implements the state’s requirements
<p>Development of Sound and Estuarine System Islands: It is the policy of the Town of Holden Beach to carefully and thoroughly review proposals for development on estuarine and spoil “islands” <u>only</u> for residential development at low densities consistent with the Town’s Zoning Ordinance and Subdivision Regulations. The development of these areas will be given <u>preliminary</u> approval by the Town, then the property owner must obtain all State and federal permits before seeking final review and approval for development by the Town.</p>	<ul style="list-style-type: none"> ▪ Implemented through the Town’s zoning ordinances.
<p>Damage to Existing Marshes by Bulkhead Installation: It is the policy of the Town of Holden Beach to prevent damages to existing coastal and freshwater marshes as a result of bulkhead installation. Maintenance and replacement of existing bulkheads will be permitted.</p>	<ul style="list-style-type: none"> ▪ Implemented through the Town’s zoning ordinances.
<p>Prohibitions on Permanent Erosion Control Structures on Ocean Shorelines: Ocean-front bulkheads, groins, seawalls or other shoreline hardening erosion control structures are not permitted by the State of North Carolina and will not be allowed on Holden Beach.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning ordinances and by maintaining a local CAMA officer who implements the state’s requirements ▪ Town supports reconsidering the state’s policy, particularly in inlet hazard areas

<p>Off-Road Vehicles: It is the policy of the Town of Holden Beach not to allow off-road vehicles on the dunes or on the shoreline area, with the exception of public service or emergency vehicles and inherited commercial fishing right access.</p>	<ul style="list-style-type: none"> ▪ Implemented through the Town’s rule making authorities.
<p>Dredging: The town understands the need for Corps of Engineers maintenance dredging of adjacent waters, but seeks to control dredging so it does not directly or indirectly <u>increase</u> beach or waterway erosion on the island. In all dredging cases, spoil resulting should be located on the island so as to mitigate the effects of past erosion or to prevent additional erosion.</p>	<ul style="list-style-type: none"> ▪ Town continues to work with the COE to obtain approval for a 50-year beach nourishment project designed to protect the town’s infrastructure, homeowners, and commercial property. ▪ Town continues its support of the Lockwood Folly Inlet dredging project
<p>Surface Water Quality: It is the policy of the Town of Holden Beach to seek improved stormwater runoff and other development standards and management procedures which will protect and enhance the water quality of the estuarine and ocean system.</p>	<ul style="list-style-type: none"> ▪ The Town adopted a stormwater ordinance requiring all new development to have BMPs to treat the first 1 ½ inches of rain ▪ Town has not expanded any existing stormwater outfalls ▪ Construction of the Town’s sewer system will help improve surface water quality by eliminating the impacts from septic systems
<p>Stormwater Management and Control: It is the policy of the Town of Holden Beach to control Stormwater runoff resulting from land development. The intent of regulations and procedures in that regard is to assure that stormwater is controlled within the limits of individual property under development so that storm runoff does not adversely affect adjacent property, and so that none directly flows into coastal waters – ocean or waterway.</p>	<ul style="list-style-type: none"> ▪ The Town adopted a stormwater ordinance that requires all new development to have BMPs to treat the first 1 ½ inches of rain ▪ Town completed two projects on Ocean Blvd. to improve the management of stormwater as well as smaller projects on some side streets
<p>Restrictions on Menhaden Fishing: Holden Beach also supports the efforts of many coastal communities to restrict operation of Menhaden fishing activities to an area <u>outside</u> a one-mile limit of the island.</p>	<ul style="list-style-type: none"> ▪ Town works with other local communities to lobby the state legislature to restrict these fishing activities
<p>Commercial and Recreational Fisheries: It is the policy of the Town of Holden Beach to work toward the protection and enhancement of North Carolina’s sport and commercial fisheries industry. Development or any activity which will adversely affect coastal and estuarine waters will be prohibited. Those structures which support commercial and recreational fisheries will be allowed to be placed adjacent to coastal and estuarine waters if all required permits are obtained. In the design, construction and operation of water dependent structures, efforts will be made to mitigate negative effects on water quality and fish habitat, as determined by 15A NCAC 7H, Resources Commission. The developer and/or owner will bear the cost of any such mitigation.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning ordinances and by maintaining a local CAMA officer who implements the state’s requirements ▪ State wildlife boat ramp was constructed.

<p>Support for N.C. Division of Marine Fisheries: Holden Beach supports the N.C. Division of Marine Fisheries’ efforts to develop regulations and policies that help protect ocean and estuarine water quality.</p>	<ul style="list-style-type: none">▪ Town supports federal and state efforts to improve the management of fisheries and water quality in the region
<p>Other Areas Where Policies and Recommended Actions Are Needed:</p>	
<ul style="list-style-type: none">▪ Work with state officials to explore alternative ways to stabilize beaches and inlet hazard areas	

Current Policies: Hazard Mitigation	Accomplishments, Constraints, & Implementing Ordinances
<p>Development in Hazardous Areas: The Town of Holden Beach shall continue to discourage high-intensity uses and large structures being constructed within the 100-year floodplain, erosion-prone areas, and other locations susceptible to hurricane and flooding hazards.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning and flood prevention ordinances and its hazard mitigation plan ▪ Town continues to maintain a CRC rating of 8 ▪ Town has undertaken 5 beach nourishment projects since 2001
<p>Flooding and Storm Surge: Holden Beach is an active participant in the National Flood Insurance Program and is supportive of hazard mitigation elements. Holden Beach is participating in the regular phase of the insurance program. Holden Beach also supports continued enforcement of the CAMA and 404 wetlands development permit processes in areas potentially susceptible to flooding.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning and flood prevention ordinances and by maintaining a local CAMA officer who implements the state’s requirements ▪ Town continues to implement its Hazard Mitigation Plan ▪ Town maintains a CRC rating of 8
<p>Wave Action and Shoreline Erosion: Holden Beach is supportive of the CAMA development permit process for estuarine shoreline areas and the requisite development standards which encourage both shoreline stabilization and facilitation of proper drainage.</p>	<ul style="list-style-type: none"> ▪ The policy is implemented through the CAMA permitting program, local zoning ordinances, and the Town’s hazard mitigation plan. ▪ The Town continues to work with the COE on a 50 year plan of work to stabilize shoreline and inlet areas through techniques such as periodic beach nourishment of eroded shoreline areas
<p>High Winds: Holden Beach supports enforcement of the N.C. State Building Code. The Town will continue to enforce the State Building Code on wind resistant construction with design standards of from 120 to 150 mph wind loads.</p>	<ul style="list-style-type: none"> ▪ The Town enforces the state building code and requires design standards to meet 130 mph wind loads
<p>Public Acquisition of Hazardous Areas: The Town of Holden Beach shall consider purchasing parcels located in hazard areas or rendered unbuildable by storms or other events, for the purpose of public water access and conservation of open space if funding, including State or federal funding, is available.</p>	<ul style="list-style-type: none"> ▪ Town’s Hazard Mitigation Plan also encourages this activity ▪ Town continues to look for funding for these activities as well as suitable locations for public acquisition
<p>Relocation of Structures: Structures may be moved off property subject to erosion and relocated elsewhere so long as that movement meets the requirements of the town ordinance and building code.</p>	<ul style="list-style-type: none"> ▪ Implemented when needed.
<p>Removal of Damaged Structures: It is also the policy of the town that homes damaged as a result of erosion or coastal storms may be considered a public nuisance and may be subject to removal at property owner expense.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning ordinance

<p>Reorientation of the Lockwoods Folly Inlet: More specifically, the town strongly supports the efforts of the U.S. Army Corps of Engineers to study the effects of reorientation of the Lockwoods Folly Inlet, and to develop an engineering plan to nourish a large percentage of beach areas on the island.</p>	<ul style="list-style-type: none"> ▪ Town has provided funding for the Lockwood Folly Dredging project
<p>Post Disaster Recovery: It is the policy of the Town of Holden Beach to follow the Hurricane Preparedness Plan for Holden Beach in coordination with the Brunswick County Emergency Services Agency.</p>	<ul style="list-style-type: none"> ▪ Town updates its Hurricane Preparedness Plan on an annual basis ▪ Implementation of the Hazard Mitigation Plan
<p>Redevelopment of Developed Areas: It is the policy of the Town of Holden Beach that homes and other structures may be redeveloped (rebuilt) on the same property as a result of coastal storms or other reasons, so long as they are not damaged beyond 50% of their value. If damages exceed 50% of value, then redevelopment on the same property must meet town and state requirements pertaining to hazard setback, and septic tank installation.</p>	<ul style="list-style-type: none"> ▪ Town implements this policy through its zoning and flood prevention ordinances and its hazard mitigation plan
<p>Evacuation Plans: It is the policy of the Town of Holden Beach to provide for an orderly and timely evacuation of Town property owners and visitors during a declared emergency by following established procedures set forth by the Holden Beach Evacuation Plan and by the Brunswick County Emergency Management Agency.</p>	<ul style="list-style-type: none"> ▪ Recently updated the Town’s emergency management policies ▪ Town updates its Hurricane Preparedness Plan on an annual basis
<p>Other Areas Where Policies and Recommended Actions Are Needed:</p>	
<ul style="list-style-type: none"> ▪ The Town should continue its efforts to build a new off island emergency operations center to serve the Town when the Island has to be evacuated or the bridge is closed due to high winds

Appendix E

Action Plan & Implementation Schedule

Key for Table F.1

Management Topic:

LU: Land Use & Development
ICC: Infrastructure Carrying Capacity
PA: Public Access and Recreation
WQ: Water Quality and Environment
Haz: Hazards

Responsible Party:

BC: Board of Commissioners
DPI: Department of Planning and Inspections
DPU: Department of Public Utilities
FD: Fire Department
PZB: Planning and Zoning Board
EPC: Emergency Preparedness Committee
PAIC: Public Area Improvement Committee
SPC: Shoreline Protection Committee
SC: Sewer Committee
PD: Police Department
BC: Brunswick County
COE: U.S. Army Corps of Engineers
DENR: Department of Environment and Natural Resources
DCM: Division of Coastal Management
DOT: North Carolina Department of Transportation

Schedule:

Ongoing: Currently implemented by local ordinances or activities of Town's staff
Ongoing*: Ongoing after a major storm event
High: High priority action (years 1 – 3)
High*: High priority action after major storm event
Med: Medium priority (years 3 – 6 or as opportunity or resources permit)
Med*: Medium priority action after major storm event
Low: Low priority (as opportunity or resources permit).

Table E.1: Action Plan & Implementation Schedule 2007 - 2013

Policies & Recommendations	Responsibility	Mgt. Topics	Schedule
Land Use & Development			
<i>Goal 9.1: Adopt and apply local policies that balance protection of the natural resources and fragile areas with economic development.</i>			
<i>Objective 9.1.A: Manage growth and development while protecting the environment to ensure that the Town remains an inclusive, wholesome family community that maintains its residential character, natural resources, and its recreational amenities.</i>			
Policy 9.1.A.1: New Development	DPI, PZB, BC	LU	Ongoing
Policy 9.1.A.2: Height Limits	DPI, PZB, BC	LU, ICC	Ongoing
Policy 9.1.A.3: Aesthetics	DPI, PZB, BC	LU	Ongoing
Policy 9.1.A.4: Commercial Development	DPI, PZB, BC	LU	Ongoing
Policy 9.1.A.5: Beach Clubhouses	DPI, PZB, BC	LU	Ongoing
Policy 9.1.A.6: Mixed Use	DPI, PZB, BC	LU, ICC	Medium
Recommended Action 9.1.A.6.a	DPI, PZB, BC	LU, ICC	Medium
Policy 9.1.A.7: Development Impacts on Conservation Zones	DPI, PZB, BC	LU, PA, WQ	Ongoing
Recommended Action 9.1.A.7.a	DPI, PZB, BC	LU, PA, WQ	High
Recommended Action 9.1.A.7.b	DPI, PZB, BC	LU, PA	High
Policy 9.1.A.8: Development of Sound and Estuarine Areas	DPI, PZB, BC	LU, WQ	Ongoing
Policy 9.1.A.9: Industrial Impacts	DPI, PZB, BC	LU, WQ	Ongoing
Policy 9.1.A.10: Marinas	DPI, PZB, BC	LU, WQ	Ongoing
Policy 9.1.A.11: Dry-Stack Storage	DPI, PZB, BC	LU, PA	Ongoing
Policy 9.1.A.12: Tourism	PZB, BC	LU, PA	Ongoing
Recommended Action 9.1.A.12.a	PZB, BC	LU, PA	High
Policy 9.1.A.13: Future Development on the Mainland	DPI, PZB, BC, BC	LU, PA, WQ	High
Recommended Action 9.1.A.13.a	DPI, PZB	LU	High
Policy 9.1.A.14: Public Participation	DPI, BC	LU	Ongoing
Recommended Action 9.1.A.14.a	DPI, BC	LU	Ongoing
Recommended Action 9.1.A.14.b	DPI, BC	LU	Ongoing
Policy 9.1.A.15: Commitment to State and Federal Programs	DPI, PZB, BC, DCM	LU, ICC, PA, WQ, Haz	Ongoing
Policy 9.1.A.16: Policy Review	DPI, PZB	LU	Ongoing
Infrastructure Carrying Capacity			
<i>Goal 9.2: To ensure that public infrastructure systems are appropriately sized, located and managed to serve the Town's population while ensuring the quality and productivity of the AECs and other fragile areas are protected and restored.</i>			
<i>Objective 9.2.A: Ensure that the location and capacity of public infrastructure is consistent with the Town's growth and development goals.</i>			
Policy 9.2.A.1: Provision of Town Services	DPI, DPU, PZB, BC	LU, ICC	Ongoing
Recommended Action 9.2.A.1.a	DPI, DPU	ICC	High
Policy 9.2.A.2: Operation of Water Facilities	DPU, DPI, PZB, BC	LU, ICC	Ongoing
Recommended Action 9.2.A.2.a	DPU, DPI, PZB, BC	ICC	Medium
Recommended Action 9.2.A.2.b	DPU, DPI, PZB, BC	ICC	Low
Recommended Action 9.2.A.2.c	DPU, DPI, PZB, BC	ICC	Ongoing

Policy 9.2.A.3: Operation of Wastewater Facilities	DPU, DPI, PZB, BC, SC	ICC	Ongoing
Recommended Action 9.2.A.3.a	DPI, DPU, PZB, BC, SC	ICC, WQ	Ongoing
Recommended Action 9.2.A.3.b	DPU, PZB, BC, BC, SC	ICC, WQ	Medium
Policy 9.2.A.4: Potable Water Supply	DPU, DPI, PZB, BC, BC	ICC, Haz	Ongoing
Policy 9.2.A.5: Soils & Septic Tank Suitability	DPU, DPI, PZB, BC, BC, SC	ICC, WQ	Ongoing
Policy 9.2.A.6: Bridge and Road Improvements	DPI, PZB, BC, DOT	ICC, Haz	Ongoing
Recommended Action 9.2.A.6.a	DPI, PZB, DOT	ICC, Haz	Medium
Recommended Action 9.2.A.6.b	DPI, DPU	ICC, Haz	Ongoing
Policy 9.2.A.7: Maintaining Adequate Fire Protection	DPI, DPU, BC	ICC, Haz	Ongoing
Policy 9.2.A.8: Bicycles	DPI, DPU, PZB, BC, PAIC	ICC, Haz	Ongoing
Policy 9.2.A.9: Rezoning Analysis	DPI, DPU, PZB, BC	LU, ICC, PA	Ongoing
Public Access & Recreation			
Goal 9.3: Public Access and Recreation: Maximize public access to the beaches and public trust waters of the Town of Ocean Isle Beach and maximize recreational opportunities for residents and visitors.			
Objective 9.3.A: Access for All Segments of the Community: Implement policies and recommendations that assure satisfactory access to all segments of the community including persons with disabilities and provide recreational opportunities for residents and visitors.			
Policy 9.3.A.1: Existing Public Access Facilities	DPI, BC, PAIC	PA	Ongoing
Recommended Action 9.3.A.1.a	DPI, BC, DCM, PAIC	PA	High
Policy 9.3.A.2: Expand Public Access Facilities	DPI, BC, DCM, PAIC	PA	Ongoing
Recommended Action 9.3.A.2.a	DPI, BC, DCM, PAIC	PA	High
Policy 9.3.A.3: Signage	PD, PAIC	PA, Haz	Medium
Policy 9.3.A.4: Public Acquisition of Hazardous Areas	DPI, PZB, BC	PA, ICC, Haz	Low
Policy 9.3.A.5: Public Access Parking	DPI, PZB, BC, PAIC	PA, Haz	Medium
Recommended Action 9.3.A.5.a	DPI, PZB, BC, PAIC	PA, ICC, Haz	Medium
Policy 9.3.A.6: Pedestrian and Bicycle Access	PZB, BC, PAIC	PA, ICC	High
Recommended Action 9.3.A.6.a	DPI, PZB, BC, PAIC	PA, ICC	High
Policy 9.3.A.7: Supporting Federal and State Programs to Expand Access	BC, DCM	PA	Ongoing
Objective 9.3.B: Reduce User Conflicts: The Town will manage conflicting uses of its beaches and public trust waters.			
Policy 9.3.B.1: Dune Protection	DPI, PZB, BC, SPC	PA, WQ, Haz	Ongoing
Policy 9.3.B.2: Off Road Vehicles	PD, SPC	PA, Haz	Ongoing
Policy 9.3.B.3: Floating Homes	DPI, PZB, BC	PA, Haz	Ongoing
Policy 9.3.B.4: Moorings	DPI, PZB, BC	PA, Haz	Ongoing
Policy 9.3.B.5: Maintenance of Navigation Channels	DPI, PZB, BC, COE	PA	High
Policy 9.3.B.6: Blocking or Impairing Navigational Channels	DPI, PZB, BC	PA	Ongoing
Policy 9.3.B.7: Dredging to Support Commercial and Sport Fishing Facilities	DPI, PZB, BC, COE	PA	Ongoing
Policy 9.3.B.8: Safe Boating	DPI	PA, Haz	High
Policy 9.3.B.9: Operation of Jet Skis and Personal Watercraft	PD	PA, Haz	High

Water Quality & Natural Environment			
Goal 9.4: Water Quality and Natural Environment: Maintain and where possible improve the natural environment and water quality within and adjacent to Holden Beach.			
Objective 9.4.A: Protect the Natural Environment: The Town shall take actions designed to protect and where possible enhance and restore the sensitive natural resources located in and adjacent to the Town of Holden Beach.			
Policy 9.4.A.1: Areas of Environmental Concern	DPI, DPU, PZB, BC, DCM, SPC	WQ, PA	Ongoing
Policy 9.4.A.2: Coastal Wetlands	DPI, DPU, PZB, BC, DCM, COE, SPC	WQ, ICC, Haz	Ongoing
Policy 9.4.A.3: Estuarine Shorelines	DPI, DPU, PZB, BC, DCM, COE, SPC	WQ, Haz	Ongoing
Policy 9.4.A.4: Ocean Hazard Areas	DPI, DPU, PZB, BC, DCM, SPC	WQ, Haz	Ongoing
Policy 9.4.A.5: Appropriate Land Use in Areas of Environmental Concern	DPI, DPU, BC, DCM, SPC	WQ, PA, Haz	Ongoing
Policy 9.4.A.6: Development in Environmentally Fragile Areas	DPI, PZB, BC, SPC	WQ, PA, Haz	Ongoing
Policy 9.4.A.7: Development of Sound and Estuarine System Islands	DPI, PZB, BC, SPC	WQ, PA, Haz	Ongoing
Policy 9.4.A.8: Prime Wildlife Habitats	DPI, DPU, PZB, BC	WQ, PA	Ongoing
Policy 9.4.A.9: Turtle Nesting Areas	DPI, DPU, PZB, BC, SPC	WQ, PA	High
Policy 9.4.A.10: Damage to Existing Marshes by Bulkhead Installation	DPI, PZB, BC	WQ, PA, Haz	Ongoing
Policy 9.4.A.11: Permanent Erosion Control Structures on Ocean Shorelines	DPI, PZB, BC, DCM, SPC	WQ, PA, Haz	Ongoing
Recommended Action 9.4.A.11.a	DCM, CRC	WQ, PA, Haz	High
Policy 9.4.A.12: Use of Package Treatment Plants	DPI, PZB, BC, BC	WQ, ICC	Ongoing
Policy 9.4.A.13: Dredging	DPI, BC, DCM	WQ	Ongoing
Policy 9.4.A.14: Solid Waste Disposal & Recycling	BC	WQ	Ongoing
Objective 9.4.B: Support Commercial and Recreational Fisheries: The Town will work toward the protection and enhancement of North Carolina's sport and commercial fisheries industries.			
Policy 9.4.B.1: Commercial and Recreational Fisheries Development	DPI, PZB, BC, DMF	WQ, PA	Ongoing
Policy 9.4.B.2: Commercial and Residential Fisheries	PZB, BC, DMF	WQ, PA	Ongoing
Policy 9.4.B.3: Shellfishing Waters	BC, DMF	WQ, PA	Ongoing
Policy 9.4.B.4: Restrictions on Menhaden Fishing	BC, DMF	WQ, PA	Ongoing
Policy 9.4.B.5: Support for N.C. Division of Marine Fisheries	BC	WQ, PA	Ongoing
Objective 9.4.C: Improving Water Quality: Reduce pollutant loadings in stormwater generated within the Town of Holden Beach			
Policy 9.4.C.1: Sewage Treatment	DPI, DPU, PZB, BC, SC	WQ	Ongoing
Policy 9.4.C.2: Surface Water Quality	DPI, DPU, PZB, BC	WQ	Ongoing
Recommended Action 9.4.C.2.a	DPI, DPU, PZB, BC	WQ	Ongoing
Policy 9.4.C.3: Stormwater Management	DPI, DPU, PZB, BC	WQ	Ongoing
Policy 9.4.C.4: Reduction of Existing Stormwater Discharges	DPI, DPU, PZB, BC	WQ	Ongoing
Recommended Action 9.4.C.4.a	DPI, DPU, DOT	WQ	Medium
Recommended Action 9.4.C.4.b	DPI, DPU, PZB, BC	WQ	High
Policy 9.4.C.5: Retrofits for Existing Development	DPI, DPU, PZB, BC	WQ, ICC	Medium

Policy 9.4.C.6: Stormwater Discharges From Municipal Sources	DPI, DPU, PZB, BC	WQ	High
Recommended Action 9.4.C.6.a	DPI, DPU, PZB, BC	WQ	High
Hazard Mitigation			
Goal 9.5: Hazard Mitigation: Protect public health and safety from the damaging effects of storm surges, wave action, flooding, high winds, and erosion associated with hurricanes, severe weather, and other hazards.			
Objective 9.5.A: Protect Against Damage From Hurricanes, Severe Weather, or Other Hazards: The Town will be proactive in its efforts to minimize damage and threats to public health and safety associated with hurricanes, severe weather, and other hazards.			
Policy 9.5.A.1: Development in Hazardous Areas	DPI, PZB, BC, DCM, EPC	Haz, LU	Ongoing
Policy 9.5.A.2: Flooding and Storm Surge	DPI, PZB, BC, EPC	Haz, LU	Ongoing
Policy 9.5.A.3: Flood Insurance	DPI, BC, EPC	Haz, LU, ICC	Ongoing
Recommended Action 9.5.A.3.a	DPI, BC, EPC	Haz, LU, ICC	High
Policy 9.5.A.4: Wave Action and Shoreline Erosion	DPI, PZB, BC, DCM	Haz, PA, LU, WQ	Ongoing
Policy 9.5.A.5: High Winds	DPI	Haz, LU, ICC	Ongoing
Policy 9.5.A.6: Relocation of Structures	DPI, BC	Haz, PA, LU, WQ	Ongoing
Policy 9.5.A.7: Lockwoods Folly Inlet	BC, BC, DCM, COE	Haz, LU, PA	High
Policy 9.5.A.8: Evacuation Plans	DPI, DPU, PD, BC, EPC	Haz, LU	Ongoing
Recommended Action 9.5.A.8.a	DPI, DPU, BC, EPC	Haz, ICC	High
Policy 9.5.A.9: Evacuation Shelters	DPI, PD, BC, BC, EPC	Haz	Ongoing
Policy 9.5.A.10: Land Acquisition	BC, BC, DCM, EPC	Haz, PA	Low
Recommended Action 9.5.A.10.a	DPI, DPU, EPC	Haz, LU, PA	Low
Policy 9.5.A.11: Minimize Potential Fire Damage	DPI, BC	Haz, LU	Ongoing
Policy 9.5.A.12: Beach Nourishment	DPI, BC, BC, COE, SPC	Haz, LU, PA	High
Recommended Action 9.5.A.12.a	DPI, BC, COE, SPC	Haz, LU, PA	High
Recommended Action 9.5.A.12.b	DPI, BC, BC, SPC	Haz, LU, PA	Medium
Policy 9.5.A.13: Bulldozing	DPI, DPU, PD	Haz	Ongoing
Policy 9.5.A.14: Hurricane Preparedness Plan	DPI, PZB, BC, BC, EPC	Haz	Ongoing
Policy 9.5.A.15: Public Education	DPI, PD, BC, BC, EPC	Haz	Ongoing
Recommended Action 9.5.A.15.a	DPI, PD, BC, EPC	Haz	Medium
Objective 9.5.B: Post-Storm Recovery: In the period following a hurricane, severe weather event, or other disaster, the Town will work as quickly as possible to restore essential services related to public health, safety and welfare.			
Policy 9.5.B.1: Post Disaster Recovery	DPI, DPU, PD, BC	Haz	Ongoing*
Policy 9.5.B.2: Redevelopment of Developed Areas	DPI, PZB, BC	Haz, LU, ICC	Ongoing*
Policy 9.5.B.3: Removal of Damaged Structures	DPI, DPU, BC	Haz	High*
Policy 9.5.B.4: Mutual Aid	DPI, PD, BC, BC	Haz, ICC	Ongoing
Policy 9.5.B.5: Staging Schedule for Reconstruction and Repair	DPU, BC	Haz, ICC	Ongoing*
Policy 9.5.B.6: Public Infrastructure Repair and Replacement	DPI, DPU, BC	Haz, LU, ICC	Ongoing
Policy 9.5.B.7: Electrical Outages	DPI, DPU, BC	Haz, ICC	Low
Policy 9.5.B.8: Post-Storm Hazard Mitigation	DPI, DPU, BC, BC	Haz, ICC	Ongoing
Recommended Action 9.5.B.8.a	DPI, BC	Haz, ICC	High*

Appendix F

Impact of Policies on Management Topics

Table F 1: Impact of Policies on Management Topics

Policy Benchmarks for Management Topics					
Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
	Reduction in habitat loss due to development Reduction of water resource and water quality degradation	Infrastructure with the capacity to support planned development	More planned access locations Upgrades to existing access locations	Land use regulations and measures to minimize water quality impacts	Reduces the vulnerability to hazards Land use considers the capacity of evacuation infrastructure
Land Use & Development					
<i>Goal 9.1: Adopt and apply local policies that balance protection of the natural resources and fragile areas with economic development.</i>					
<i>Objective 9.1.A: Manage growth and development while protecting the environment to ensure that the Town remains an inclusive, wholesome family community that maintains its residential character, natural resources, and its recreational amenities.</i>					
Policy 9.1.A.1: New Development	Beneficial: density restrictions help limit water quality impacts	Neutral	Neutral	Beneficial: density restrictions help limit water quality impacts	Beneficial: reduces vulnerability to hazards and capacity of evacuation infrastructure
Policy 9.1.A.2: Height Limits	Neutral	Beneficial: Infrastructure with the capacity to support planned development	Neutral	Neutral	Beneficial: Reduces the vulnerability to hazards
Policy 9.1.A.3: Aesthetics	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.1.A.4: Commercial Development	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.1.A.5: Beach Clubhouses	Neutral	Neutral	Neutral	Neutral	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.1.A.6: Mixed Use	Neutral	Neutral	Neutral	Neutral	Neutral
Recommended Action 9.1.A.6.a	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.1.A.7: Development Impacts on Conservation Zones	Beneficial: Reduction of water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Beneficial: reduces vulnerability to hazards
Recommended Action 9.1.A.7.a	Beneficial: Reduction of water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Beneficial: reduces vulnerability to hazards
Recommended Action 9.1.A.7.b	Beneficial: Reduction of water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Beneficial: reduces vulnerability to hazards
Policy 9.1.A.8: Development of Sound and Estuarine Areas	Beneficial: Reduction of water quality degradation	Neutral	Beneficial: protects access to public trust waters	Beneficial: Land use regulations and measures to minimize water quality impacts	Beneficial: reduces vulnerability to hazards
Policy 9.1.A.9: Industrial Impacts	Beneficial: Reduction of water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Beneficial: reduces vulnerability to hazards
Policy 9.1.A.10: Marinas	Beneficial: Reduction of water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Beneficial: reduces vulnerability to hazards
Policy 9.1.A.11: Dry Stack Storage	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.1.A.12: Tourism	Neutral	Neutral	Neutral	Neutral	Neutral
Recommended Action 9.1.A.12.a	Neutral	Neutral	Neutral	Neutral	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.1.A.13: Future Development on the Mainland	Beneficial: prevents potential impacts that would cause water quality and habitat impacts	Neutral	Neutral	Beneficial: prevents potential impacts that would cause water quality impacts	Beneficial: prevents development in hazard areas
Recommended Action 9.1.A.13.a	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.1.A.14: Public Participation	Neutral	Neutral	Neutral	Neutral	Neutral
Recommended Action 9.1.A.14.a	Neutral	Neutral	Neutral	Neutral	Neutral
Recommended Action 9.1.A.14.b	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.1.A.15: Commitment to State and Federal Programs	Neutral	Beneficial: improved roadways can accommodate additional traffic	Beneficial: improved beach access points can accommodate additional visitors	Neutral	Beneficial: widened beaches protect oceanfront property
Policy 9.1.A.16: Policy Review	Neutral	Neutral	Neutral	Neutral	Neutral
Infrastructure Carrying Capacity					
Goal 9.2: <i>To ensure that public infrastructure systems are appropriately sized, located and managed to serve the Town’s population while ensuring the quality and productivity of the AECs and other fragile areas are protected and restored.</i>					
Objective 9.2.A: <i>Ensure that the location and capacity of public infrastructure is consistent with the Town’s growth and development goals.</i>					
Policy 9.2.A.1: Provision of Town Services	Neutral	Beneficial: cost of infrastructure can be shared with developers/ owners	Neutral	Beneficial: water quality is improved by the use of municipal sewer systems	Neutral
Recommended Action 9.2.A.1.a	Neutral	Beneficial: Infrastructure with the capacity to support planned development	Neutral	Neutral	Beneficial: Land use considers the capacity of evacuation infrastructure
Policy 9.2.A.2: Operation of Water Facilities	Neutral	Neutral	Neutral	Neutral	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Recommended Action 9.2.A.2.a	Neutral	Beneficial: helps to ensure the adequacy of Town’s water supply	Neutral	Neutral	Beneficial: helps reduce future hazards
Recommended Action 9.2.A.2.b	Neutral	Beneficial: helps reduce future hazards	Neutral	Neutral	Neutral
Recommended Action 9.2.A.2.c	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.2.A.3: Operation of Water Wastewater Facilities	Beneficial: Municipal sewers provide reduction in water quality degradation	Beneficial: helps reduce future hazards	Neutral	Beneficial: surface water and groundwater protection	Beneficial: helps reduce future hazards
Recommended Action 9.2.A.3.a	Beneficial: Municipal sewers provide reduction in water quality degradation	Beneficial: helps reduce future hazards	Neutral	Beneficial: surface water and groundwater protection	Beneficial: helps reduce future hazards
Recommended Action 9.2.A.3.b	Beneficial: Municipal sewers provide reduction in water quality degradation	Beneficial: helps reduce future hazards	Neutral	Beneficial: surface water and groundwater protection	Beneficial: helps reduce future hazards
Policy 9.2.A.4: Potable Water Supply	Neutral	Beneficial: Infrastructure with the capacity to support planned development	Neutral	Neutral	Beneficial: Reduces the vulnerability to hazards
Policy 9.2.A.5: Soils and Septic Tank Suitability	Neutral	Beneficial: reduces demands on infrastructure	Neutral	Beneficial: water quality is improved by the use of municipal sewer systems	Beneficial: helps reduce future health hazards associated with faulty septic systems
Policy 9.2.A.6: Bridge and Road Improvements	Neutral	Beneficial: reduces demands on infrastructure	Beneficial: Would increase accessibility of access sites	Neutral	Beneficial: helps reduce future hazards
Recommended Action 9.2.A.6.a	Neutral	Beneficial: helps determine if roads are adequate	Neutral	Neutral	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Recommended Action 9.2.A.6.b	Neutral	Beneficial: reduces demands on infrastructure	Neutral	Neutral	Neutral
Policy 9.2.A.7: Maintaining Adequate Fire Protection	Neutral	Beneficial: ensures infrastructure supports planned growth	Neutral	Neutral	Beneficial: helps prevent dangers from urban fires
Policy 9.2.A.8: Bicycles	Neutral	Beneficial: reduces demands on infrastructure	Beneficial: increases accessibility of access sites to bicyclers	Neutral	Neutral
Policy 9.2.A.9 Rezoning Analysis	Beneficial: density restrictions help limit water quality impacts	Beneficial: ensures infrastructure supports planned growth	Neutral	Beneficial: minimizes water resource degradation and water quality impacts	Neutral
Public Access & Recreation					
Goal 9.3: Public Access and Recreation: Maximize public access to the beaches and public trust waters of the Town of Holden Beach and maximize recreational opportunities for residents and visitors.					
Objective 9.3.A: Access for All Segments of the Community: Implement policies and recommendations that assure satisfactory access to all segments of the community including persons with disabilities and provide recreational opportunities for residents and visitors alike.					
Policy 9.3.A.1: Existing Access Facilities	Neutral	Neutral	Beneficial: focuses on upgrading access sites	Neutral	Neutral
Recommended Action 9.3.A.1.a	Neutral	Neutral	Beneficial: focuses on upgrading access sites	Neutral	Neutral
Policy 9.3.A.2: Expand Public Access Facilities	Neutral	Neutral	Beneficial: focuses on increasing number of access sites	Neutral	Neutral
Recommended Action 9.3.A.2.a	Neutral	Neutral	Beneficial: focuses on increasing number of access sites	Neutral	Neutral
Policy 9.3.A.3: Signage	Neutral	Neutral	Beneficial: Focuses on marking new access sites	Neutral	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.2.A.4: Public Acquisition of Hazardous Areas	Neutral	Neutral	Beneficial: More planned access locations	Neutral	Beneficial: Reduces the vulnerability to hazards
Policy 9.3.A.5: Public Access Parking	Neutral	Beneficial: prevents strain on Town's existing facilities	Beneficial: increases accessibility of access sites	Neutral	Neutral
Recommended Action 9.3.A.5.a	Neutral	Beneficial: reduces demands on infrastructure	Beneficial: increases accessibility of access sites	Neutral	Neutral
Policy 9.3.A.6: Pedestrian and Bicycle Access	Neutral	Beneficial: reduces demands on infrastructure	Beneficial: increases accessibility of access sites	Neutral	Neutral
Recommended Action 9.3.A.6.a	Neutral	Beneficial: reduces demands on infrastructure	Beneficial: increases accessibility of access sites	Neutral	Neutral
Policy 9.3.A.7: Supporting Federal and State Programs to Expand Access	Neutral	Neutral	Beneficial: provides a strategy to fund access development	Neutral	Neutral
Objective 9.3.B: Reduce User Conflicts: The Town will manage conflicting uses of its beaches and public trust waters.					
Policy 9.3.B.1: Dune Protection	Neutral	Neutral	Beneficial: Maintains public trust waters for access	Neutral	Beneficial: Reduces the vulnerability to hazards
Policy 9.3.B.2: Off Road Vehicles	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.3.B.3: Floating Homes	Neutral	Neutral	Beneficial: Maintains public trust waters for access	Beneficial: Minimizes impacts to water quality & submerged habitat	Beneficial: eliminates hazards associated with floating homes
Policy 9.3.B.4: Moorings	Neutral	Neutral	Beneficial: Maintains public trust waters for access	Neutral	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.3.B.5: Maintenance of Navigation Channels	Neutral	Neutral	Beneficial: Maintains public trust waters for access	Neutral	Beneficial: allows for navigation in the vicinity of Ocean Isle Beach
Policy 9.3.B.6: Blocking or Impairing Navigational Channels	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.3.B.7: Dredging to Support Commercial and Sport Fishing Facilities	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.3.B.8: Safe Boating	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.3.B.9: Operation of Jet Skis and Personal Watercraft	Neutral	Neutral	Neutral	Neutral	Neutral
Water Quality & Natural Environment					
Goal 9.4: Water Quality and Natural Environment: Maintain and where possible improve the natural environment and water quality within and adjacent to Holden Beach.					
Objective 9.4.A: Protect the Natural Environment: The Town shall take actions designed to protect and where possible enhance and restore the sensitive natural resources located in and adjacent to the Town of Holden Beach.					
Policy 9.4.A.1: Areas of Environmental Concern	Beneficial: Reduction of water resource and water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Neutral
Policy 9.4.A.2: Coastal Wetlands	Beneficial: Reduction of water resource and water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Beneficial: Reduces the vulnerability to hazards
Policy 9.4.A.3: Estuarine Shorelines	Beneficial: helps minimize water quality impacts from development	Neutral	Beneficial: Protect and improve access to public trust waters	Beneficial: helps improve water quality	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.4.A.4: Ocean Hazard Areas	Neutral	Neutral	Beneficial: Protect and improve access to public trust waters	Neutral	Beneficial: Reduces the vulnerability to hazards
Policy 9.4.A.5: Appropriate Land Use in Areas of Environmental Concern	Beneficial: helps minimize water quality impacts from development	Neutral	Beneficial: Protect and improve access to public trust waters	Beneficial: helps improve water quality	Beneficial: Reduces the vulnerability to hazards
Policy 9.4.A.6: Development in Environmentally Fragile Areas	Beneficial: helps minimize water quality impacts from development	Neutral	Neutral	Beneficial: helps minimize water quality impacts from development	Beneficial: helps reduce future hazards
Policy 9.4.A.7: Development of Sound and Estuarine System Islands	Beneficial: helps minimize water quality impacts from development	Neutral	Neutral	Beneficial: helps minimize water quality impacts from development	Beneficial: helps reduce future hazards
Policy 9.4.A.8: Prime Wildlife Habitats	Beneficial: helps minimize water quality impacts from development	Neutral	Neutral	Beneficial: helps protect habitat	Neutral
Policy 9.4.A.9: Turtle Nesting Areas	Neutral	Neutral	Neutral	Beneficial: helps protect habitat	Neutral
Policy 9.4.A.10: Damage to Existing Marshes by Bulkhead Installation	Beneficial: helps minimize water quality impacts from development	Neutral	Beneficial: helps maintain public access to public trust waters	Beneficial: helps protect and improve water quality	Beneficial: helps reduce future hazards
Policy 9.4.A.11: Permanent Erosion Control Structures on Ocean Shorelines	Neutral	Neutral	Neutral	Neutral	Beneficial: Reduces the vulnerability to hazards
Recommended Action 9.4.A.11.a	Neutral	Neutral	Neutral	Neutral	Beneficial: Reduces the vulnerability to hazards
Policy 9.4.A.12: Use of Package Treatment Plants	Beneficial: helps limit habitat and water quality impacts from development	Neutral	Neutral	Beneficial: helps limit habitat and water quality impacts from development	Beneficial: Reduces the vulnerability to hazards

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.4.A.13: Dredging	Neutral	Neutral	Neutral	Neutral	Beneficial: Reduces the vulnerability to hazards
Policy 9.4.A.14: Solid Waste Disposal & Recycling	Neutral	Beneficial: helps reduce pressures on existing landfills	Neutral	Beneficial helps protect water quality	Neutral
Objective 9.4.B: Support Commercial and Recreational Fisheries: The Town will work toward the protection and enhancement of North Carolina’s sport and commercial fisheries industries.					
Policy 9.4.B.1: Commercial and Recreational Fisheries Development	Neutral	Neutral	Neutral	Beneficial: helps protect habitat	Neutral
Policy 9.4.B.2: Commercial and Residential Fisheries	Neutral	Neutral	Neutral	Beneficial: helps protect habitat	Neutral
Policy 9.4.B.3: Shellfishing Waters	Beneficial: helps minimize water quality impacts from development	Neutral	Neutral	Beneficial: helps improve water quality	Neutral
Policy 9.4.B.4: Restrictions on Menhaden Fishing	Neutral	Neutral	Neutral	Beneficial: helps protect habitat	Neutral
Policy 9.4.B.5: Support for N.C. Division of Marine Fisheries	Beneficial: Reduction in water quality degradation	Neutral	Neutral	Beneficial: Land use regulations and measures to minimize water quality impacts	Neutral
Objective 9.4.C: Improving Water Quality: Reduce pollutant loadings in stormwater generated within the Town of Holden Beach.					
Policy 9.4.C.1: Sewage Treatment	Beneficial: helps limit habitat and water quality impacts from development	Neutral	Neutral	Beneficial: helps limit habitat and water quality impacts from development	Neutral
Policy 9.4.C.2 Surface Water Quality	Beneficial: helps limit habitat and water quality impacts from development	Neutral	Neutral	Beneficial: helps limit habitat and water quality impacts from development	Neutral
Recommended Action 9.4.C.2.a	Beneficial: helps limit water quality & habitat impacts	Neutral	Neutral	Beneficial: helps limit water quality impacts	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.4.C.3: Stormwater Management	<i>Beneficial:</i> helps limit habitat and water quality impacts from development	Neutral	Neutral	<i>Beneficial:</i> helps limit habitat and water quality impacts from development	<i>Beneficial:</i> reduces potential flooding
Policy 9.4.C.4: Reduction of Existing Stormwater Discharges	<i>Beneficial:</i> helps minimize water quality impacts from development	Neutral	Neutral	<i>Beneficial:</i> helps improve water quality	<i>Beneficial:</i> reduces potential flooding
Recommended Action 9.4.C.4.a	Neutral	Neutral	Neutral	<i>Beneficial:</i> helps improve water quality	<i>Beneficial:</i> reduces potential flooding
Recommended Action 9.4.C.4.b	Neutral	Neutral	Neutral	<i>Beneficial:</i> helps improve water quality	Neutral
Policy 9.4.C.5: Stormwater Retrofits for Existing Development	Neutral	Neutral	Neutral	<i>Beneficial:</i> helps improve water quality	<i>Beneficial:</i> reduces potential flooding
Policy 9.4.C.6: Stormwater Discharges from Municipal Sources	<i>Beneficial:</i> helps minimize water quality impacts from Town	Neutral	Neutral	<i>Beneficial:</i> helps improve water quality	<i>Beneficial:</i> reduces potential flooding
Recommended Action 9.4.C.6.a	<i>Beneficial:</i> helps minimize water quality impacts from Town	Neutral	Neutral	<i>Beneficial:</i> helps improve water quality	<i>Beneficial:</i> reduces potential flooding
Hazard Areas					
<i>Goal 9.5: Protect public health and safety from the damaging effects of storm surges, wave action, flooding, high winds, and erosion associated with hurricanes, severe weather, and other hazards.</i>					
<i>Objective 9.5.A: Protect Against Damage from Hurricanes, Severe Weather or Other Hazards: The Town will be proactive in its efforts to minimize damage and threats to public health and safety associated with hurricanes, severe weather, and other hazards.</i>					
Policy 9.5.A.1: Development in Hazardous Areas	Neutral	Neutral	Neutral	Neutral	<i>Beneficial:</i> Reduces vulnerability to hazards
Policy 9.5.A.2: Flooding and Storm Surge	Neutral	Neutral	Neutral	Neutral	<i>Beneficial:</i> reduces vulnerability to hazards

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.5.A.3: Flood Insurance	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Recommended Action 9.5.A.3.a	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.4: Wave Action and Shoreline Erosion	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.5: High Winds	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.6: Relocation of Structures	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.7: Lockwoods Folly Inlet	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.8: Evacuation Plans	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Recommended Action 9.5.A.8.a	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.9: Evacuation Shelters	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.10: Land Acquisition	Neutral	Neutral	Beneficial: might lead to land for new access sites	Beneficial: might lead to land protected for habitat and water quality benefits	Beneficial: reduces vulnerability to hazards
Recommended Action 9.5.A.10.a	Neutral	Neutral	Beneficial: might lead to land for new access sites	Beneficial: might lead to protected habitat and water quality benefits	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.11: Minimize Potential Fire Damage	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.5.A.12: Beach Nourishment	Neutral	Neutral	Beneficial: helps maintain existing access sites	Neutral	Beneficial: reduces vulnerability to hazards
Recommended Action 9.5.A.12.a	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Recommended Action 9.5.A.12.b	Neutral	Neutral	Beneficial: helps maintain existing access sites	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.13: Bulldozing	Neutral	Neutral	Beneficial: helps maintain existing access sites	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.14: Hurricane Preparedness Plan	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.A.15: Public Education	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Recommended Action 9.5.A.15.a	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Objective 9.5.B: Post-Storm Recovery: In the period following a hurricane, severe weather event, or other disaster, the Town will work as quickly as possible to restore essential services related to public health, safety and welfare.					
Policy 9.5.B.1: Post Disaster Recovery	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.B.2: Redevelopment of Developed Areas	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.B.3: Removal of Damaged Structures	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Policy 9.5.B.4: Mutual Aid	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.5.B.5: Staging Schedule for Reconstruction and Repair	Neutral	Neutral	Neutral	Neutral	Neutral

Policies & Recommendations	Land Use	ICC	Public Access	Water Quality	Hazards
Policy 9.5.B.6: Public Infrastructure Repair and Replacement	Neutral	Beneficial: helps ensure long term infrastructure capacity	Neutral	Neutral	Neutral
Policy 9.5.B.7: Electrical Outages	Neutral	Neutral	Neutral	Neutral	Neutral
Policy 9.5.B.8: Post-Storm Hazard Mitigation	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces vulnerability to hazards
Recommended Action 9.5.B.8.a	Neutral	Neutral	Neutral	Neutral	Beneficial: reduces future vulnerability to hazards

Appendix G

Adjacent Jurisdiction Comments

The planning directors of the adjacent jurisdictions were notified by e-mail that the final version of the Town of Holden Beach 2007 CAMA Land Use Plan draft was available on-line for review and comment. No comments were received within the forty-five day review period.
